25/5/16

SE/IV/CBGS/CHEM./CET-I
Q. P. Code : 573100

Chemical Engineering Thermodynamics - I

[Total Marks : 80]

(31)

- N.B.:
- Question No.1. is compulsory.
 - Attempt any three questions out of remaining five questions.
 - Assume suitable data and justify the same.
 - Figures to the right indicate full marks

Q 1

Explain any Four

- Fugacity and Fugacity Coefficient 05
- Explain T-S diagram 05
- What do you understand by an equation of state? Write down three equations of state. 05
- Define Helmholtz Energy and Gibbs Energy 05
- Explain heat engine, heat pump and how the performance of heat engine and heat pump are measured 05

Q 2

- Determine Q, W, ΔU and ΔH for each step of a process in which argon is compressed isothermally at 500 K, 0.2 to 3 Mpa, is cooled isobarically to 300 K, is expanded adiabatically to 1.0 Mpa, is expanded isothermally to its initial value and is then heated isobarically to 500 K. Sketch all processes on a P-V diagram. 12

$$C_p = 3.5R \text{ KJ/Kmol, K} \quad C_v = 2.5R \text{ KJ/Kmol, K} \quad R = 8.314 \text{ KJ/Kmol K}$$

- Derive Maxwell relations. 08

Q 3

- It is required to freeze 1 kg of water at 273 K by means of a refrigeration machine which operates in the surrounding at 300 K. The latent heat of fusion of ice at 273 K is 334. 11 KJ/Kg. Determine
 - The minimum amount of work required
 - Heat given up to the surroundings.

- Berthelot equation of state is given by 10

$$\left(P + \frac{a}{Tv^2}\right)(v-b) = RT$$

Find the value of a and b in terms of P_c and T_c .

Q 4

- Find the volume of N-Pentane at 500 K and 20 bar for a gas obey Redlich Kwong equation of state. $T_c = 469.6 \text{ K}$ $P_c = 33.7 \text{ bar}$ 10
- A steel casting at a temperature 725 K and weighing 35 Kg is quenched in 150 kg oil at 275 K. If there are no heat losses. Determine the change in entropy. 10

$$C_p \text{ of steel} = 0.88 \text{ KJ/kg K} \quad C_p \text{ of oil} = 2.5 \text{ KJ/Kg K}$$

TURN OVER

SE/IV/CBGS /chem
Q. P. Code : 573100

2

- Q 5 (a) Prove that ratio of heat capacity $\frac{C_p}{C_v} = \left(\frac{dv}{dp}\right)_T \left(\frac{dp}{dv}\right)_T$
- (b) Prove that internal energy is a function of only temperature, in case of an ideal gas.
- (c) Derive the relations to estimate the residual enthalpy and residual entropy for a gas obeying vander Waals equation of state.
- Q 6 (a) Chlorine gas follow redlich kwong equation of state with following constants
 $a = 8671.28 \text{ Kpa (m}^3/\text{kmol) K}^{1/2}$
 $b = 0.02595 \text{ m}^3/\text{kmol}$
Find enthalpy and entropy departure at pressure 155 bar and temperature 520 K consider $z = 0.7723$
- (b) Derive an expression for Joule Thomson Coefficient for vander waal gas and find the relation for inversion temperature.
