(3 Hours)   Marks 80

N.B.1) Question no 1 is compulsory.

   2) Figures to the right indicate full marks.

   3) Attempt any three from Q2 to Q6.

Q1 a) If any 14 integers from 1to 26 are chosen then show that at least one of them is   05

   a multiple of another.

   b) Functions f and g are defined as follows :   05

   $f: R \to R$, $g: R \to R$ $f(x) = 2x + 3$, $g(x) = 3x - 4$.

   Find fog and gofog.

   c) $L \langle \frac{d}{dt} \frac{\sin 3t}{t} \rangle$.   05

   d) Show that there does not exist an analytic function whose real part is   05
   $3x^2 - 2x^2 y + y^2$.

Q2 a) Evaluate $\int_0^\infty e^{-t} \left(\frac{\cos 3t - \cos 2t}{t} \right) dt$ 06

   b) Evaluate $L^{-1} \left\{ \frac{s}{(s^2+1)(s^2+4)(s^2+9)} \right\}$ 06

   c) Find bilinear transformation which maps the points Z=1, i,-1 into points   08

   $W = i, 0, -i$. Hence find fixed pts of transformation and the image of $|z| < 1$.

Q3 a) If A, B ,C are of subsets of universal set U, then prove that   06

   $A \times (B \cup C) = (A \times B) \cup (A \times C)$

   b) Let A={1,2,3,6}, B ={1,2,3,6,7,14,21,42} and R be the relation 'is divisible by'.   06

   Draw Hasse Diagram for two sets. Show that are posets.

   c) Find Laplace transform of following functions.   08

   (i) $e^{-2t}\sqrt{1 - \sin t}$ (ii) $te^{-2t} H(t - 1)$

_____

0C4BF3468DABB1001C728E397757178E

Q4 a) In how many different ways can 4 ladies and 6 gentlemen be seated   06

in a row, so no ladies sit together.

b) Find analytic function whose real part is   06

$$\frac{\sin 2x}{\cos h2y + \cos 2x}$$

c) Evaluate inverse Laplace Transform of following functions   08

(i) $\frac{1}{(s-3)(s+4)^2}$ by convolution theorem   (ii) $\log\left(1 + \frac{a^2}{s^2}\right)$

Q5 a) Solve the following equation by using Laplace transform   06

$$\frac{dy}{dt} + 2y + \int_0^t y\,dt = \sin t, \text{ given that } y(0) = 1$$

b) Find p such that the function $\frac{1}{2}\log(x^2 + y^2) + i\tan^{-1}\frac{px}{y}$ is analytic.   06

c) For $x, y \in Z$, xRy if and if only $2x + 5y$ is divisible by 7   08

is R an equivalence relation ? Find equivalence relation.

Q6 a) Each coefficient of the equation $ax^2 + bx + c = 0$ is determined by   06
throwing an ordinary die. Find the probability that the equation will
have real roots.

b) A certain test for particular cancer is known to be 95% accurate. A person   06
submits to the test and result is positive. Suppose that a person comes from a
population of the 1,00,000 where 2000 people suffer from disease . What can
we conclude about the probability that person under test has particular cancer?

c) i) If five points are taken in a square of side 2 units. Show that at least two of   04

them are no more than $\sqrt{2}$ units apart.

ii) How many friends must you have to guarantee that at least five of them have   04

their birthday in same month.
