

Q1(D)	Answer <u>any one</u> of the following:					
i)	Schematically represent synthesis of a saturated fatty acid. Comment on the utilization of ATP in the process.					
ii)	Elaborate on ketone body formation and its significance in diabetes mellitus					
Q2(A)	Choose the MOST APPROPRIATE answer (any three):					
i)	In A chain of Insulin molecule the C-terminal amino acid is					
	a) glycine b) valine (c) serine					
ii)	Thiocynate competes withuptake mechanism.					
	a) tyrosine b) iodine c) phenylalanine					
iii)	Glycogen phosphorylase is active in state					
; _{vv})	a) phosphorylated b) dephosphorylated c) decarboxylated Oxidative deamination is the conversion of an amino					
iv)	a) group from an amino acid to a keto acid b) acid to a keto-acid and ammonia					
	c) acid to a carboxylic acid and ammonia					
v)	is a lipid soluble hormone					
	a) Insulin b) Vasopressin c) Tetraiodothyronine					
vi)	Transaminases are present in					
	a) liver b) pancreas c) intestine					
Q2(B)	Attempt in brief any one:	2				
i)	State true or false, giving reasons: Amino acid degradation is similar to any other catabolic processes					
ii)	Define and explain the term- Myxedema					
Q2(C)	Write a noteonany one of the following:					
i)	Deamination reactions Deamination reactions					
ii)	Physiological role of glucocorticoids					
Q2(D)	Write detailed answers to <u>any one</u> of the following:					
i)	Discuss the effect of epinephrine on glycogen synthesis and its breakdown.					
ii)	Elaborate on Krebs -Henseleit cycle and give its significance					
Q3(A)	Choose the MOST APPROPRIATE answer (any three):					
i) (wavelength ranges is NOT associated with UV spectroscopy.					
5,97,000	a) upto 380 nm b) 400 - 100nm c) 380 - 750nm					

11)	absorbs half of the light incident upon it. The intensity of the light transmitted by the third glass plate is					
	a)12.5 % b) 56.25% c) 75.00%	\$ 65 B				
iii)	The wavelength of light source is 560 nm is the corresponding wave number.					
	a) 1780×10^5 cm -1 b) 1.78 cm -1 c) 0.178×10^3 cm-1					
iv)	High speed centrifuge operates at the maximum speed upto					
,	a) 5000 rpm b) 50,000 rpm c) 12,000 rpm					
v)	Rayleigh scatterring is used incentrifuge.					
:\	a) table-top b) high speed c) analytical					
vi)	compound/s can be used as denisty gradient substance.					
	a) CsCl b) maltose c) Both a and b					
02(D)		•				
Q3(B)	Define and explain <u>any one</u> :	2				
	(i) Centrifugal force ii) Extinction					
Q3(C)	Describe the applications/uses of any one of the following:	4				
i)	Colorimeter 4					
ii)	Analytical centrifuge					
11)						
Q3(D)	Write detailed answers for <u>any one</u> of the following:					
i)	Differentiate between rate zonal and isopycnic centrifugation. Add a note on sedimentation					
ŕ	coefficient					
ii)	Write the (a) Derivation (b) limitations and (c) applications of Beer-Lambert law.					
Q4(A)	Choose the MOST APPROPRIATE answer (<u>any three</u>):	3				
i) 🔬	TEMED is used as a					
\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\	a) staining agent (b) matrix base c) catalyst					
ii)	In electrophoresis proteins will migrate to					
300 P	a) cathode (b) anode					
	c) cathode or anode and is dependent on charge on the protein					
iii)	In SDS-PAGE seperation is based on					
2077	(a) molecular weight (b) shape (c) shape and molecular weight					
iv)	The pH of resolving gel isthat of stacking gel.					
3 3 0 0 0	(a) more than (b) less than (c) same as					
v)	The electrophoretic mobility denoted by μ is denoted as					
3 3 6 8	a) 1/VE (b) E/V (c) V/E					

i) Coomassie Brilliant blue (ii) Bis-acrylamide Q4(C) Write short notes on any one of the following: i) Use of electrophoresis in nucleic acids separation. Support material used in electrophoresis. Q4(D) Answer any one the following: ii) Write an elaborative note on NATIVE PAGE ii) Justify: "Electrophoresis is a technique governed by various factors". Q5(A) Write short note on any one of the following: i) Acyl malonyl shuttle ii) Utilization of ketone bodies Q5(B) Write a note on any one of the following: ii) Transamination Q5(C) Answer in brief any one of the following: ii) State true or false giving reasons: No relation exists between RCF and RPM iii) Write a note on construction and working of a simple colorimeter Q5(D) Answer in brief any one of the following: i) Describe the principle of electrophoresis and enlist two buffers used for the same. ii) Write a note on application of electrophoresis in protein study Q5(E) State true or false (any three) i) Oxytocin is a female hormone ii) Acetyl coenzyme A is associated with ketolysis iii) Molar absorptivity is not constant for any single biomolecule. iv) SDS is an cationic detergent v) Extinction and absorbance are antonyms	vi)	blotting technique uses probes to detect RNA, post electrophoresis						
i) Coomassie Brilliant blue (ii) Bis-acrylamide Q4(C) Write short notes on any one of the following: i) Use of electrophoresis in nucleic acids separation. Support material used in electrophoresis. Q4(D) Answer any one the following: ii) Write an elaborative note on NATIVE PAGE iii) Justify: "Electrophoresis is a technique governed by various factors": Q5(A) Write short note on any one of the following: i) Acyl malonyl shuttle ii) Utilization of ketone bodies Q5(B) Write a note on any one of the following: ii) Insulin iii) Transamination Q5(C) Answer in brief any one of the following: ii) State true or false giving reasons: No relation exists between RCF and RPM iii) Write a note on construction and working of a simple colorimeter Q5(D) Answer in brief any one of the following: i) Describe the principle of electrophoresis and enlist two buffers used for the same. ii) Write a note on application of electrophoresis in protein study Q5(E) State true or false (any three) i) Oxytocin is a female hormone ii) Acetyl coenzyme A is associated with ketolysis iii) Molar absorptivity is not constant for any single biomolecule. iv) SDS is an cationic detergent v) Extinction and absorbance are antonyms		a) Northern	(b) Southern	(c) Western				
i) Coomassie Brilliant blue (ii) Bis-acrylamide Q4(C) Write short notes on any one of the following: i) Use of electrophoresis in nucleic acids separation. Support material used in electrophoresis. Q4(D) Answer any one the following: ii) Write an elaborative note on NATIVE PAGE iii) Justify: "Electrophoresis is a technique governed by various factors": Q5(A) Write short note on any one of the following: i) Acyl malonyl shuttle ii) Utilization of ketone bodies Q5(B) Write a note on any one of the following: ii) Insulin iii) Transamination Q5(C) Answer in brief any one of the following: ii) State true or false giving reasons: No relation exists between RCF and RPM iii) Write a note on construction and working of a simple colorimeter Q5(D) Answer in brief any one of the following: i) Describe the principle of electrophoresis and enlist two buffers used for the same. ii) Write a note on application of electrophoresis in protein study Q5(E) State true or false (any three) i) Oxytocin is a female hormone ii) Acetyl coenzyme A is associated with ketolysis iii) Molar absorptivity is not constant for any single biomolecule. iv) SDS is an cationic detergent v) Extinction and absorbance are antonyms								
i) Coomassie Brilliant blue (ii) Bis-acrylamide Q4(C) Write short notes on any one of the following: i) Use of electrophoresis in nucleic acids separation. Support material used in electrophoresis. Q4(D) Answer any one the following: ii) Write an elaborative note on NATIVE PAGE iii) Justify: "Electrophoresis is a technique governed by various factors": Q5(A) Write short note on any one of the following: i) Acyl malonyl shuttle ii) Utilization of ketone bodies Q5(B) Write a note on any one of the following: ii) Insulin iii) Transamination Q5(C) Answer in brief any one of the following: ii) State true or false giving reasons: No relation exists between RCF and RPM iii) Write a note on construction and working of a simple colorimeter Q5(D) Answer in brief any one of the following: i) Describe the principle of electrophoresis and enlist two buffers used for the same. ii) Write a note on application of electrophoresis in protein study Q5(E) State true or false (any three) i) Oxytocin is a female hormone ii) Acetyl coenzyme A is associated with ketolysis iii) Molar absorptivity is not constant for any single biomolecule. iv) SDS is an cationic detergent v) Extinction and absorbance are antonyms	Q4(B)	Give the role of an	y one of the following:					
i) Use of electrophoresis in nucleic acids separation. ii) Support material used in electrophoresis. Q4(D) Answer anv one the following: i) Write an elaborative note on NATIVE PAGE ii) Justify: "Electrophoresis is a technique governed by various factors". Q5(A) Write short note on anv one of the following: i) Acyl malonyl shuttle ii) Utilization of ketone bodies Q5(B) Write a note on anv one of the following: i) Insulin ii) Transamination Q5(C) Answer in brief anv one of the following: i) State true or false giving reasons: No relation exists between RCF and RPM ii) Write a note on construction and working of a simple colorimeter Q5(D) Answer in brief anv one of the following: i) Describe the principle of electrophoresis and enlist two buffers used for the same. ii) Write a note on application of electrophoresis in protein study Q5(E) State true or false (anv three) i) Oxytocin is a female hormone ii) Acetyl coenzyme A is associated with ketolysis iii) Molar absorptivity is not constant for any single biomolecule. iv) SDS is an cationic detergent v) Extinction and absorbance are antonyms								
i) Use of electrophoresis in nucleic acids separation. ii) Support material used in electrophoresis. Q4(D) Answer anv one the following: i) Write an elaborative note on NATIVE PAGE ii) Justify: "Electrophoresis is a technique governed by various factors". Q5(A) Write short note on anv one of the following: i) Acyl malonyl shuttle ii) Utilization of ketone bodies Q5(B) Write a note on anv one of the following: i) Insulin ii) Transamination Q5(C) Answer in brief anv one of the following: i) State true or false giving reasons: No relation exists between RCF and RPM ii) Write a note on construction and working of a simple colorimeter Q5(D) Answer in brief anv one of the following: i) Describe the principle of electrophoresis and enlist two buffers used for the same. ii) Write a note on application of electrophoresis in protein study Q5(E) State true or false (anv three) i) Oxytocin is a female hormone ii) Acetyl coenzyme A is associated with ketolysis iii) Molar absorptivity is not constant for any single biomolecule. iv) SDS is an cationic detergent v) Extinction and absorbance are antonyms								
ii) Support material used in electrophoresis. Q4(D) Answer any one the following: i) Write an elaborative note on NATIVE PAGE ii) Justify: "Electrophoresis is a technique governed by various factors". Q5(A) Write short note on any one of the following: i) Acyl malonyl shuttle ii) Utilization of ketone bodies Q5(B) Write a note on any one of the following: i) Insulin ii) Transamination Q5(C) Answer in brief any one of the following: ii) State true or false giving reasons: No relation exists between RCF and RPM ii) Write a note on construction and working of a simple colorimeter Q5(D) Answer in brief any one of the following: i) Describe the principle of electrophoresis and enlist two buffers used for the same. ii) Write a note on application of electrophoresis in protein study Q5(E) State true or false (any three) i) Oxytocin is a female hormone ii) Acetyl coenzyme A is associated with ketolysis iii) Molar absorptivity is not constant for any single biomolecule. iv) SDS is an cationic detergent v) Extinction and absorbance are antonyms								
Q4(D) Answer any one the following: i) Write an elaborative note on NATIVE PAGE ii) Justify: "Electrophoresis is a technique governed by various factors". Q5(A) Write short note on any one of the following: i) Acyl malonyl shuttle ii) Utilization of ketone bodies Q5(B) Write a note on any one of the following: i) Insulin ii) Transamination Q5(C) Answer in brief any one of the following: i) State true or false giving reasons: No relation exists between RCF and RPM ii) Write a note on construction and working of a simple colorimeter Q5(D) Answer in brief any one of the following: i) Describe the principle of electrophoresis and enlist two buffers used for the same. ii) Write a note on application of electrophoresis in protein study Q5(E) State true or false (any three) i) Oxytocin is a female hormone ii) Acetyl coenzyme A is associated with ketolysis iii) Molar absorptivity is not constant for any single biomolecule. iv) SDS is an cationic detergent v) Extinction and absorbance are antonyms	,							
i) Write an elaborative note on NATIVE PAGE ii) Justify: "Electrophoresis is a technique governed by various factors". Q5(A) Write short note on anv one of the following: i) Acyl malonyl shuttle ii) Utilization of ketone bodies Q5(B) Write a note on anv one of the following: i) Insulin ii) Transamination Q5(C) Answer in brief anv one of the following: i) State true or false giving reasons: No relation exists between RCF and RPM ii) Write a note on construction and working of a simple colorimeter Q5(D) Answer in brief anv one of the following: i) Describe the principle of electrophoresis and enlist two buffers used for the same. ii) Write a note on application of electrophoresis in protein study Q5(E) State true or false (anv three) i) Oxytocin is a female hormone ii) Acetyl coenzyme A is associated with ketolysis iii) Molar absorptivity is not constant for any single biomolecule. iv) SDS is an cationic detergent v) Extinction and absorbance are antonyms	ii)	Support material use	ed in electrophoresis.		20 2 20 CA			
i) Write an elaborative note on NATIVE PAGE ii) Justify: "Electrophoresis is a technique governed by various factors". Q5(A) Write short note on anv one of the following: i) Acyl malonyl shuttle ii) Utilization of ketone bodies Q5(B) Write a note on anv one of the following: i) Insulin ii) Transamination Q5(C) Answer in brief anv one of the following: i) State true or false giving reasons: No relation exists between RCF and RPM ii) Write a note on construction and working of a simple colorimeter Q5(D) Answer in brief anv one of the following: i) Describe the principle of electrophoresis and enlist two buffers used for the same. ii) Write a note on application of electrophoresis in protein study Q5(E) State true or false (anv three) i) Oxytocin is a female hormone ii) Acetyl coenzyme A is associated with ketolysis iii) Molar absorptivity is not constant for any single biomolecule. iv) SDS is an cationic detergent v) Extinction and absorbance are antonyms	04(D)	A navyan any ana tha	o fallowing					
ii) Justify: "Electrophoresis is a technique governed by various factors". Q5(A) Write short note on any one of the following: i) Acyl malonyl shuttle ii) Utilization of ketone bodies Q5(B) Write a note on any one of the following: i) Insulin ii) Transamination Q5(C) Answer in brief any one of the following: i) State true or false giving reasons: No relation exists between RCF and RPM ii) Write a note on construction and working of a simple colorimeter Q5(D) Answer in brief any one of the following: i) Describe the principle of electrophoresis and enlist two buffers used for the same. ii) Write a note on application of electrophoresis in protein study Q5(E) State true or false (any three) i) Oxytocin is a female hormone ii) Acetyl coenzyme A is associated with ketolysis iii) Molar absorptivity is not constant for any single biomolecule. iv) SDS is an cationic detergent v) Extinction and absorbance are antonyms								
Q5(A) Write short note on any one of the following: i) Acyl malonyl shuttle ii) Utilization of ketone bodies Q5(B) Write a note on any one of the following: i) Insulin ii) Transamination Q5(C) Answer in brief any one of the following: 3 i) State true or false giving reasons: No relation exists between RCF and RPM ii) Write a note on construction and working of a simple colorimeter Q5(D) Answer in brief any one of the following: 3 i) Describe the principle of electrophoresis and enlist two buffers used for the same. ii) Write a note on application of electrophoresis in protein study Q5(E) State true or false (any three) i) Oxytocin is a female hormone ii) Acetyl coenzyme A is associated with ketolysis iii) Molar absorptivity is not constant for any single biomolecule. iv) SDS is an cationic detergent v) Extinction and absorbance are antonyms	,		0,50,6		D/2			
i) Acyl malonyl shuttle ii) Utilization of ketone bodies Q5(B) Write a note on any one of the following: i) Insulin ii) Transamination Q5(C) Answer in brief any one of the following: i) State true or false giving reasons: No relation exists between RCF and RPM ii) Write a note on construction and working of a simple colorimeter Q5(D) Answer in brief any one of the following: i) Describe the principle of electrophoresis and enlist two buffers used for the same. ii) Write a note on application of electrophoresis in protein study Q5(E) State true or false (any three) i) Oxytocin is a female hormone ii) Acetyl coenzyme A is associated with ketolysis iii) Molar absorptivity is not constant for any single biomolecule. iv) SDS is an cationic detergent v) Extinction and absorbance are antonyms	11)	Justify: Electropho	resis is a technique governed	by various factors.	9			
i) Acyl malonyl shuttle ii) Utilization of ketone bodies Q5(B) Write a note on any one of the following: i) Insulin ii) Transamination Q5(C) Answer in brief any one of the following: i) State true or false giving reasons: No relation exists between RCF and RPM ii) Write a note on construction and working of a simple colorimeter Q5(D) Answer in brief any one of the following: i) Describe the principle of electrophoresis and enlist two buffers used for the same. ii) Write a note on application of electrophoresis in protein study Q5(E) State true or false (any three) i) Oxytocin is a female hormone ii) Acetyl coenzyme A is associated with ketolysis iii) Molar absorptivity is not constant for any single biomolecule. iv) SDS is an cationic detergent v) Extinction and absorbance are antonyms	Q5(A)	Write short note on	any one of the following:		3			
Q5(B) Write a note on any one of the following: i) Insulin ii) Transamination Q5(C) Answer in brief any one of the following: i) State true or false giving reasons: No relation exists between RCF and RPM ii) Write a note on construction and working of a simple colorimeter Q5(D) Answer in brief any one of the following: i) Describe the principle of electrophoresis and enlist two buffers used for the same. ii) Write a note on application of electrophoresis in protein study Q5(E) State true or false (any three) i) Oxytocin is a female hormone ii) Acetyl coenzyme A is associated with ketolysis iii) Molar absorptivity is not constant for any single biomolecule. iv) SDS is an cationic detergent v) Extinction and absorbance are antonyms			(0.970)					
i) Insulin ii) Transamination Q5(C) Answer in brief any one of the following: 3 i) State true or false giving reasons: No relation exists between RCF and RPM iii) Write a note on construction and working of a simple colorimeter Q5(D) Answer in brief any one of the following: 3 i) Describe the principle of electrophoresis and enlist two buffers used for the same. iii) Write a note on application of electrophoresis in protein study Q5(E) State true or false (any three) 3 i) Oxytocin is a female hormone ii) Acetyl coenzyme A is associated with ketolysis iii) Molar absorptivity is not constant for any single biomolecule. iv) SDS is an cationic detergent v) Extinction and absorbance are antonyms	ii)	Utilization of keton	e bodies					
i) Insulin ii) Transamination Q5(C) Answer in brief any one of the following: 3 i) State true or false giving reasons: No relation exists between RCF and RPM iii) Write a note on construction and working of a simple colorimeter Q5(D) Answer in brief any one of the following: 3 i) Describe the principle of electrophoresis and enlist two buffers used for the same. iii) Write a note on application of electrophoresis in protein study Q5(E) State true or false (any three) 3 i) Oxytocin is a female hormone ii) Acetyl coenzyme A is associated with ketolysis iii) Molar absorptivity is not constant for any single biomolecule. iv) SDS is an cationic detergent v) Extinction and absorbance are antonyms	Q5(B)	Write a note on any	one of the following:	2 4 6 6 6 9 2 2 2 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0	3			
Q5(C) Answer in brief any one of the following: State true or false giving reasons: No relation exists between RCF and RPM Write a note on construction and working of a simple colorimeter Q5(D) Answer in brief any one of the following: Describe the principle of electrophoresis and enlist two buffers used for the same. Write a note on application of electrophoresis in protein study Q5(E) State true or false (any three) Oxytocin is a female hormone i) Oxytocin is a female hormone ii) Acetyl coenzyme A is associated with ketolysis iii) Molar absorptivity is not constant for any single biomolecule. iv) SDS is an cationic detergent v) Extinction and absorbance are antonyms		Insulin						
i) State true or false giving reasons: No relation exists between RCF and RPM ii) Write a note on construction and working of a simple colorimeter Q5(D) Answer in brief any one of the following: i) Describe the principle of electrophoresis and enlist two buffers used for the same. Write a note on application of electrophoresis in protein study Q5(E) State true or false (any three) Oxytocin is a female hormone ii) Acetyl coenzyme A is associated with ketolysis iii) Molar absorptivity is not constant for any single biomolecule. iv) SDS is an cationic detergent Extinction and absorbance are antonyms	ii)	Transamination						
i) State true or false giving reasons: No relation exists between RCF and RPM ii) Write a note on construction and working of a simple colorimeter Q5(D) Answer in brief any one of the following: i) Describe the principle of electrophoresis and enlist two buffers used for the same. Write a note on application of electrophoresis in protein study Q5(E) State true or false (any three) Oxytocin is a female hormone ii) Acetyl coenzyme A is associated with ketolysis iii) Molar absorptivity is not constant for any single biomolecule. iv) SDS is an cationic detergent Extinction and absorbance are antonyms	Q5 (C)	Answer in brief an	y one of the following:	1	3			
Q5(D) Answer in brief any one of the following: i) Describe the principle of electrophoresis and enlist two buffers used for the same. Write a note on application of electrophoresis in protein study Q5(E) State true or false (any three) i) Oxytocin is a female hormone ii) Acetyl coenzyme A is associated with ketolysis iii) Molar absorptivity is not constant for any single biomolecule. iv) SDS is an cationic detergent v) Extinction and absorbance are antonyms	i)							
 i) Describe the principle of electrophoresis and enlist two buffers used for the same. ii) Write a note on application of electrophoresis in protein study Q5(E) State true or false (any three) i) Oxytocin is a female hormone ii) Acetyl coenzyme A is associated with ketolysis iii) Molar absorptivity is not constant for any single biomolecule. iv) SDS is an cationic detergent v) Extinction and absorbance are antonyms 	ii)	Write a note on con	struction and working of a sin	nple colorimeter				
 i) Describe the principle of electrophoresis and enlist two buffers used for the same. ii) Write a note on application of electrophoresis in protein study Q5(E) State true or false (any three) i) Oxytocin is a female hormone ii) Acetyl coenzyme A is associated with ketolysis iii) Molar absorptivity is not constant for any single biomolecule. iv) SDS is an cationic detergent v) Extinction and absorbance are antonyms 	Q5(D)	Answer in brief an	v one of the following:		3			
 Write a note on application of electrophoresis in protein study Q5(E) State true or false (any three) Oxytocin is a female hormone Acetyl coenzyme A is associated with ketolysis Molar absorptivity is not constant for any single biomolecule. SDS is an cationic detergent Extinction and absorbance are antonyms 	i)							
 i) Oxytocin is a female hormone ii) Acetyl coenzyme A is associated with ketolysis iii) Molar absorptivity is not constant for any single biomolecule. iv) SDS is an cationic detergent v) Extinction and absorbance are antonyms 	ii)							
 i) Oxytocin is a female hormone ii) Acetyl coenzyme A is associated with ketolysis iii) Molar absorptivity is not constant for any single biomolecule. iv) SDS is an cationic detergent v) Extinction and absorbance are antonyms 	05(E)	State true or false (a	nv three)		3			
 ii) Acetyl coenzyme A is associated with ketolysis iii) Molar absorptivity is not constant for any single biomolecule. iv) SDS is an cationic detergent v) Extinction and absorbance are antonyms 	20 01 TO X							
 iii) Molar absorptivity is not constant for any single biomolecule. iv) SDS is an cationic detergent v) Extinction and absorbance are antonyms 	70 C V V							
iv) SDS is an cationic detergent v) Extinction and absorbance are antonyms				piomolecule.				
v) Extinction and absorbance are antonyms	20, 4, 10 Y		7 A.N. 457 A.V. A.Y					
vi) Centripetal force and centrifugal forces act in opposite direction	1-00 (0 26)			posite direction
