

## University of Mumbai

### Examination Second Half 2021 under cluster \_\_ (Lead College: \_\_\_\_\_)

Examinations Commencing from 28<sup>th</sup> March 2022 to 5<sup>th</sup> April 2022

Program: MCA

Curriculum Scheme: MCA ( 2year – 2020 Course)

Examination: M.C.A Semester I

Course Code: MCA11 and Course Name: Mathematical Foundations for Computer Science I

Time: 2 hour 30 minutes

Max. Marks: 80

Q1.	Choose the correct option for following questions. All the Questions are compulsory and carry equal marks [20 Marks]																																								
1.	If $V(X) = 1$ then, $V(5X+3) = ?$																																								
Option A:	9																																								
Option B:	5																																								
Option C:	12																																								
Option D:	25																																								
2.	A die is rolled 3 times. What is the probability of 3 fives?																																								
Option A:	125/216																																								
Option B:	75/216																																								
Option C:	1/216																																								
Option D:	3/216																																								
3.	Regression of y on x is																																								
Option A:	$(y - \bar{y}) = b_{yx}(x - \bar{x})$																																								
Option B:	$(x - \bar{x}) = b_{xy}(y - \bar{y})$																																								
Option C:	$(x - \bar{y}) = b_{yx}(y - \bar{x})$																																								
Option D:	$(y - \bar{x}) = b_{xy}(x - \bar{y})$																																								
4.	For the following what is bivariate probability distribution of X and Y, Find $P(X \leq 1)$																																								
	<table border="1" style="width: 100%; border-collapse: collapse; text-align: center;"> <thead> <tr> <th style="width: 10%;"></th> <th style="width: 10%;">Y</th> <th style="width: 10%;">1</th> <th style="width: 10%;">2</th> <th style="width: 10%;">3</th> <th style="width: 10%;">4</th> <th style="width: 10%;">5</th> <th style="width: 10%;">6</th> </tr> </thead> <tbody> <tr> <th style="width: 10%;">X</th> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td>0</td> <td></td> <td>0</td> <td>0</td> <td>1/32</td> <td>2/32</td> <td>2/32</td> <td>3/32</td> </tr> <tr> <td>1</td> <td></td> <td>1/16</td> <td>1/16</td> <td>1/8</td> <td>1/8</td> <td>1/8</td> <td>1/8</td> </tr> <tr> <td>2</td> <td></td> <td>1/32</td> <td>1/32</td> <td>1/64</td> <td>1/64</td> <td>0</td> <td>2/64</td> </tr> </tbody> </table>		Y	1	2	3	4	5	6	X								0		0	0	1/32	2/32	2/32	3/32	1		1/16	1/16	1/8	1/8	1/8	1/8	2		1/32	1/32	1/64	1/64	0	2/64
	Y	1	2	3	4	5	6																																		
X																																									
0		0	0	1/32	2/32	2/32	3/32																																		
1		1/16	1/16	1/8	1/8	1/8	1/8																																		
2		1/32	1/32	1/64	1/64	0	2/64																																		
Option A:	1/16																																								
Option B:	7/8																																								
Option C:	11/64																																								
Option D:	1/32																																								
5.	The z-test is used when number of samples are																																								
Option A:	greater than 10																																								
Option B:	less-than 10																																								
Option C:	greater-than-30																																								
Option D:	less-than 25																																								
6.	If $Q1=3$ , $Q2 = 4$ and $Q3=5$ Find Bowley's coefficient of skewness.																																								
Option A:	0.4																																								
Option B:	0																																								

Option C:	0.2
Option D:	-0.5
7.	Find the probability of constructing a two digit even number using the digits 2,3,4,5,6 if repetition of digits is allowed
Option A:	0.6
Option B:	0.5
Option C:	0.2
Option D:	0.1
8.	Suppose A and B are events with $P(A)=0.5$ , $P(B)=0.4$ and $P(A \cap B)=0.3$ find the probability that A or B occurs
Option A:	0.3
Option B:	0.7
Option C:	0.1
Option D:	0.6
9.	The distribution in which mean=85, median=83 and mode=81 will be
Option A:	Symmetrical
Option B:	Positive skewed
Option C:	Negative skewed
Option D:	None of these
10.	Two regression lines are given by the equations $2x + y = 30$ and $3x + 5y = 52$ . Find the values of $\bar{x}, \bar{y}$
Option A:	$\bar{x} = 14, \bar{y} = 2$
Option B:	$\bar{x} = 12, \bar{y} = 1$
Option C:	$\bar{x} = 14, \bar{y} = 1$
Option D:	$\bar{x} = 2, \bar{y} = 14$

<b>Q2</b>	<b>Solve any Two Questions out of Three (10 marks each)</b>	<b>[20 Marks]</b>																				
A	The following table gives the frequency distribution of waiting time of 75 persons at a ticket counter to buy a movie ticket.																					
	<table border="1"> <tr> <td>Waiting time (in minutes)</td> <td>0-6</td> <td>7-13</td> <td>14-20</td> <td>21-27</td> <td>28- 34</td> </tr> <tr> <td>frequency</td> <td>5</td> <td>12</td> <td>18</td> <td>30</td> <td>10</td> </tr> </table>	Waiting time (in minutes)	0-6	7-13	14-20	21-27	28- 34	frequency	5	12	18	30	10	Compute the Bowley's coefficient of skewness								
Waiting time (in minutes)	0-6	7-13	14-20	21-27	28- 34																	
frequency	5	12	18	30	10																	
B	The art competition has entries from three painters Radha, Meera and Sana. (i) Radha put in 15 paintings, 4% of her works have won first prize. (ii) Meera put in 5 paintings, 6% of her works have won first prize. (iii) Sana put in 10 paintings, 3% of her works have won first prize. What is the probability (chance) that Radha will win first prize?																					
C	Monthly demand for transistors is known to have the following probability distribution																					
	<table border="1"> <tr> <td>Demand</td> <td>1</td> <td>2</td> <td>3</td> <td>4</td> <td>5</td> <td>6</td> </tr> <tr> <td>Probability</td> <td>0.10</td> <td>0.15</td> <td>0.20</td> <td>0.25</td> <td>0.18</td> <td>0.12</td> </tr> <tr> <td>Cost</td> <td>10500</td> <td>11000</td> <td>11500</td> <td>12000</td> <td>12500</td> <td>13000</td> </tr> </table>	Demand	1	2	3	4	5	6	Probability	0.10	0.15	0.20	0.25	0.18	0.12	Cost	10500	11000	11500	12000	12500	13000
Demand	1	2	3	4	5	6																
Probability	0.10	0.15	0.20	0.25	0.18	0.12																
Cost	10500	11000	11500	12000	12500	13000																

<b>Q3.</b>	<b>Solve any Two Questions out of Three (10 marks each) [20 Marks]</b>																		
A	The Probability that a baby is born a boy is 0.51 A mid-wife delivers 10 babies. Find (i) The Probability that exactly 4 are male (ii) The Probability that at least 8 are male																		
B	Find Spearman's rank correlation for the following data <table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td>Marks in DMBI</td> <td>64</td> <td>50</td> <td>44</td> <td>42</td> <td>56</td> <td>65</td> <td>59</td> </tr> <tr> <td>Marks in SEPM</td> <td>80</td> <td>60</td> <td>37</td> <td>51</td> <td>30</td> <td>75</td> <td>44</td> </tr> </table>	Marks in DMBI	64	50	44	42	56	65	59	Marks in SEPM	80	60	37	51	30	75	44		
Marks in DMBI	64	50	44	42	56	65	59												
Marks in SEPM	80	60	37	51	30	75	44												
C	Suppose that life in hours of a certain type of radio tube is a continuous random variable X with p.d.f given by $f(x) = \begin{cases} \frac{100}{x^2} & x \geq 100 \\ 0 & \text{otherwise} \end{cases}$ (i) What is the probability that all of the original three tubes in a given set will have to be replaced in the first 150 hours of operations? (ii) What is the probability that a tube will last less than 200 hours if it is known that the tube is still functioning after 150 hours of service?																		
<b>Q4.</b>	<b>Solve any Two Questions out of Three (10 marks each) [20 Marks]</b>																		
A	Given the following bivariate probability distribution obtain (i) Marginal distribution of X and Y (ii) The conditional distributions of X given Y=1 (iii) $P(X + Y) < 4$ <table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="border: none;"></td> <td style="border: none;">X</td> <td style="border: none;">1</td> <td style="border: none;">2</td> <td style="border: none;">3</td> </tr> <tr> <td style="border: none;">Y</td> <td style="border: none;">1</td> <td>0.1</td> <td>0.1</td> <td>0.2</td> </tr> <tr> <td style="border: none;">2</td> <td style="border: none;"></td> <td>0.2</td> <td>0.3</td> <td>0.1</td> </tr> </table>		X	1	2	3	Y	1	0.1	0.1	0.2	2		0.2	0.3	0.1			
	X	1	2	3															
Y	1	0.1	0.1	0.2															
2		0.2	0.3	0.1															
B	The following table gives the number of car accidents in a city during a week. Find whether the accidents are uniformly distributed over a week. <table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td>Day</td> <td>Sun</td> <td>Mon</td> <td>Tue</td> <td>Wed</td> <td>Thu</td> <td>Fri</td> <td>Sat</td> </tr> <tr> <td>No. of accidents</td> <td>10</td> <td>17</td> <td>11</td> <td>13</td> <td>17</td> <td>14</td> <td>16</td> </tr> </table> (given for 6 degrees of freedom at 5% level of significance, the table value of $\chi^2$ is 12.59)	Day	Sun	Mon	Tue	Wed	Thu	Fri	Sat	No. of accidents	10	17	11	13	17	14	16		
Day	Sun	Mon	Tue	Wed	Thu	Fri	Sat												
No. of accidents	10	17	11	13	17	14	16												
C	Obtain the equation of regression line for the following values of x and y <table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td>x</td> <td>1</td> <td>3</td> <td>4</td> <td>6</td> <td>8</td> <td>9</td> <td>11</td> <td>14</td> </tr> <tr> <td>y</td> <td>1</td> <td>2</td> <td>4</td> <td>4</td> <td>5</td> <td>7</td> <td>8</td> <td>9</td> </tr> </table> Find the value of corresponding regression coefficient.	x	1	3	4	6	8	9	11	14	y	1	2	4	4	5	7	8	9
x	1	3	4	6	8	9	11	14											
y	1	2	4	4	5	7	8	9
