UNIVERSITY OF MUMBAI

Bachelor of Engineering

Biomedical Engineering (Fourth Year Sem VII & VIII)

Revised Course (Rev- 2012)

With effect from Academic Year 2015 -16

<u>Under</u>

FACULTY OF TECHNOLOGY

(As per Semester Based Credit and Grading System)

Preamble

To meet the challenge of ensuring excellence in engineering education, the issue of quality needs to be addressed, debated and taken forward in a systematic manner. Accreditation is the principal means of quality assurance in higher education. The major emphasis of accreditation process is to measure the outcomes of the program that is being accredited. In line with this Faculty of Technology of University of Mumbai has taken a lead in incorporating philosophy of outcome based education in the process of curriculum development.

Faculty of Technology, University of Mumbai, in one of its meeting unanimously resolved that, each Board of Studies shall prepare some Program Educational Objectives (PEO's) and give freedom to affiliated Institutes to add few (PEO's) and Course objectives and Course outcomes to be clearly defined for each Course, so that all faculty members in affiliated institutes understand the depth and approach of Course to be taught, which will enhance Learners's learning process. It was also resolved that, maximum senior faculty from colleges and experts from industry to be involved while revising the curriculum. I am happy to state that, each Board of studies has adhered to the resolutions passed by Faculty of Technology, and developed curriculum accordingly. In addition to outcome based education, semester based credit and grading system is also introduced to ensure quality of engineering education.

Semester based Credit and Grading system enables a much-required shift in focus from teachercentric to Learners-centric education since the workload estimated is based on the investment of time in learning and not in teaching. It also focuses on continuous evaluation which will enhance the quality of education. University of Mumbai has taken a lead in implementing the system through its affiliated Institutes and Faculty of Technology has devised a transparent credit assignment policy and adopted ten points scale to grade Learners's performance. Credit and grading based system was implemented for First Year of Engineering from the academic year 2012-2013. Subsequently this system will be carried forward for Second Year Engineering in the academic year 2013-2014, for Third Year and Final Year Engineering in the academic years 2014-2015 and 2015-2016 respectively.

Dr. S. K. Ukarande Dean, Faculty of Technology, Member - Management Council, Senate, Academic Council University of Mumbai, Mumbai

Preamble

The overall technical education in our country is changing rapidly in manifolds. Now it is very much challenging to maintain the quality of education with its rate of expansion. To meet present requirement a systematic approach is necessary to build the strong technical base with the quality. Accreditation will provide the quality assurance in higher education and also to achieve recognition of the institution or program meeting certain specified standards. The main focus of an accreditation process is to measure the program outcomes, essentially a range of skills and knowledge that a Learner will have at the time of graduation from the program that is being accredited. Faculty of Technology of University of Mumbai has taken a lead in incorporating philosophy of outcome based education in the process of curriculum development.

I, as Chairman, Board of Studies in Electrical Engineering of University of Mumbai, happy to state here that, Program Educational Objectives (PEOs) were finalized for undergraduate program in Electrical Engineering, more than twenty senior faculty members from the different institutes affiliated to University of Mumbai were actively participated in this process. Few PEOs were finalized for undergraduate program in Electrical Engineering are listed below;

- To provide the overall strong technical foundation to formulate, solve and analyse engineering problems during undergraduate program.
- To prepare Learners to demonstrate an ability to identify, formulate and solve electrical based issues.
- To prepare Learners to demonstrate an ability in the area of design, control, analyse and interpret the electrical and electronics systems.
- To prepare Learners for successful career in industry, research and development.
- To develop the ability among Learners for supervisory control and data acquisition for power system application.
- To provide opportunity for Learners to handle the multidisciplinary projects.
- To create the awareness of the life-long learning and to introduce them to professional ethics and codes of professional practice.

The affiliated institutes may include their own PEOs in addition to the above list

To support the philosophy of outcome based education, in addition to stated PEOs, objectives and expected outcomes are also included in the curriculum. I know, this is a small step taken to enhance and provide the quality education to the stake holders.

Dr. M. V. Bhatkar Chairman, Board of Studies in Electrical Engineering, University of Mumbai

1. To understand the basic principle, working and design of various automated
diagnostic equipments.
2. To develop skills enabling Biomedical Engineers to serve Hospitals, National and
International Industries and Government Agencies.
3. To develop core competency in the field of Biomedical Engineering to gain
technical expertise in biology and medicine for effective contribution in the
development and improvement of health care solutions.
4. To study various medical instrumentation systems, drug delivery systems and
health management systems.
A Learner will be able to
1. Demonstrate the principles of electronics used in designing various diagnostic
equipment.
2. Have in-depth knowledge about different streams in Biomedical Engineering with
greater emphasis on health care equipments and the advanced technologies such as
Telemedicine, Telemetry, Medical Imaging, etc.
3. Exhibit competency in suggesting, designing and offering the apt, reliable and
optimum solution after understanding customer's requirement completely.
4. Demonstrate ability of correlating theoretical concepts with their practical
implementation while performing laboratory exercises and project work.
5. Provide a better technical support with exposure to the hospitals and health care
6. Use modern methodologies, multi-disciplinary skill set and knowledge while
working on real time projects that demand convergence of engineering, science
and technology.

Module	Contents	Time
1.	Physiotherapy, Electrotherapy Equipments: Basic principle, working and	14
	technical specifications of Shortwave Diathermy, Ultrasonic therapy unit, Infrared	
	and UV lamps, Nerve and Muscle Stimulator.	
2.	Surgical Instruments: Surgical Diathermy machine, electrodes used with surgical	10
	diathermy, safety aspects in electronic surgical units, surgical diathermy analyzers.	
3.	Cardiac Pacemakers: Modes of operation, leads and electrodes. Power supply	8
	sources. External and Implantable Pacemaker, Performance aspects of Implantable	
	Pacemaker.	
4.	Cardiac Defibrillators: DC defibrillator, Modes of operation and electrodes,	8
	Performance aspects of dc-defibrillator, defibrillator analyzers. Implantable	
	defibrillator and defibrillator analyzer.	
5.	Hemodialysis Machine: Basic principle of Dialysis and its type. Different types of	4
	dialyzer membrane, Portable type. Various monitoring circuits.	
6.	Laser Applications in Biomedical Engineering	4
	Laser classifications, Types of Lasers, Medical Applications, Laser delivery Systems	
	and safety.	

- 1. Handbook of Biomedical Instrumentation: R S. Khandpur. (PH Pub)
- 2. Medical Instrumentation, Application and Design: J G. Webster. (John Wiley)
- 3. Introduction to Biomedical Equipment Technology: Carr –Brown. (PH Pub)

Reference Books:

- 1. Encyclopedia of Medical Devices and Instrumentation: J G. Webster. Vol I- IV (PH Pub)
- 2. Various Instruments Manuals.
- 3. Various internet resources.

Internal Assessment (IA):

Two tests must be conducted which should cover at least 80% of syllabus. The average marks of both the tests will be considered for final Internal Assessment.

End Semester Examination:

Question paper will comprise of 6 questions, each carrying 20 marks. The Learners need to solve total 4 questions. Question No.1 will be compulsory and based on entire syllabus. Remaining question (Q.2 to Q.6) will be selected from all the modules.

Term Work:

Term work consists of minimum eight experiments. The distribution of the term work shall be as follows:

Laboratory work (Experiments and Journal)	:20 marks
Attendance (Practical and Theory)	:05 marks

Course Code	Course Name	Теа	ching Schei	Credits Assigned				
		Theory	Pract.	Tut	Theory	Pract.	Tut	Total
BMC702	Medical Imaging-II (abbreviated as MI-II)	4	2	-	4	1	-	5

Course Code	Course Name	Examination scheme								
		Theory Marks)		
		Internal Assessment			End Term		Pract.	Oral	Total	
		Test 1	Test 2	Avg.	exam		2			
BMC702	Medical Imaging-II	20	20	20	80	25	-	25	150	

Course Objectives	1. To familiarize the learners with the various Imaging techniques in medicine
	operating principles and quality control aspects of various imaging modalities.
	2 To keep the learners abreast with the technological developments in the field
	2. To keep the learners abreast with the teenhological developments in the field
	of Medical Imaging
Course Outcomes	A Learner will able to
	1. Understand essential physics, concepts of Medical Imaging and how they are
	employed in diagnosis and therapy.
	2. Get familiar with the current techniques of medical Imaging along with their
	clinical applications.
	3. To apprehend the importance of radiation constructive utilization and safety.

Module	Contents	Time				
1.	Principle of Computed tomography	10				
Scanner configurations/generations, CT system: Scanning unit(gantry), detectors						
	data acquisition system, spiral CT, scanner parameters, CT Number Reconstruction					
	techniques, Radon Transform, Filtered Back projection, Fourier Reconstruction					
	Technique, Iterative					
	reconstruction Technique, Image quality and artifacts, Clinical applications of CT					
2.	Advancements in CT	06				
	Multi-detector computed tomography (MDCT), Flat panel detectors					
	CT-Angiography contrast agents in CT					
3.	Nuclear Magnetic Resonance:	06				
	Physics of MRI, Relaxation Parameters and Spin Echoes, Magnetic Field Gradients,					
	Slice selection and Frequency Encoding					
4.	Magnetic Resonance Imaging	10				
	Hardware: Magnets, Gradient systems, RF coils, Fourier Reconstruction techniques,					
-	Image contrast, Resolution and Factors affecting signal-to-noise. Safety					
	Considerations/Biological Effects of MRI					

5.	Pulse sequences in MRI,Contrst agents MR Angiography,Perfusion MRI, Clinical	08
	applications	
6.	Magnetic Resonance Spectroscopy (MRS)	08
	Basic Principle of MRS and localization techniques, Chemical Shift Imaging, Single-	
	voxel and Multivoxel MRS, Water Suppression techniques	

- 1. Physics of Diagnostic Radiology :Christensen
- 2. Medical Imaging Physics William .R.Hendee

Reference Books:

- 1. Biomedical Technology and Devices by James Moore .
- 2. Biomedical Engineering Handbook by Bronzino
- 3. Physics of Diagnostic images –Dowsett

Internal Assessment (IA):

Two tests must be conducted which should cover at least 80% of syllabus. The average marks of both the tests will be considered for final Internal Assessment.

End Semester Examination:

Question paper will comprise of 6 questions, each carrying 20 marks.

The Learners need to solve total 4 questions.

Question No.1 will be compulsory and based on entire syllabus.

Remaining question (Q.2 to Q.6) will be selected from all the modules.

Term Work:

Term work consists of minimum eight experiments. The distribution of the term work shall be as follows:

Laboratory work (Experiments and Journal)	:20 marks
Attendance (Practical and Theory)	:05 marks

Course Code	Course Name	Teaching Scheme			Credits Assigned				
		Theory	Pract.	Tut	Theory	Pract.	Tut	Total	
BMC703	Biomechanics Prosthesis and Orthosis (abbreviated as BPO)	4	2	-	4	1	6	5	

Course Code	Course Name	Examination scheme								
		Theory Marks				,C	^

		Test 1	Test 2	Avg.	exam					
BMC703	Biomechanics Prosthesis and Orthosis	20	20	20	80	25	-	-	125	

Course Objectives	1. To recall the general characteristics, mechanical properties of bone and tissues.						
	2. To analyze the forces at joints for various static and dynamic human activities;						
	analyze the stresses and strains in biological tissues.						
	3. To understand principles used in designing orthoses and prostheses.						
	4. To study different materials used for orthoses and prosthesis.						
	5. To understand the fabrication of prostheses and orthoses.						
Course Outcomes	A learner will be able to						
	1. Understand the definition of biomechanics, prostheses orthoses and its						
	classification and design principles.						
	2. Develop a better understanding of how mechanical principles influence human						
	motion during everyday life.						

Module	Contents	Time
	BIOMECHANICS	
1.	Force system:	02
	Classification of force system. Equilibrium of force system.	
2.	Tissue Biomechanics:	12
	Direct shear, bending and torque actions and the corresponding stresses and strains in	
	biological tissues. Stress relaxation and creep. Bone structure & composition,	
	Mechanical properties of bone, Fracture mechanism & crack propagation in bones.	
	Soft connective (skin, tendon, ligaments, etc.) covering structure function, and	
	physiological factors.	
3.	Movement Biomechanics:	08
	Study of joints and movements. Anatomical levers, Gait Analysis.	
4.	Joint analysis:	07
	Instrumentation for gait analysis: Measurement devices-footswitches, instrumented	

	walkway, Motion analysis- interrupted light photography, film/video, Selspot,					
	Goniometers.					
	PROSTHETICS AND ORTHOTICS					
5.	Principles in designing orthoses and prostheses:					
	Principles of three point pressure, total contact, partial weight bearing.					
6.	Classification in prosthetics and orthotics: Lower Extremity orthoses and	13				
	prostheses, Upper Extremity orthoses and prostheses. Spinal orthoses.					

List of Experiments:

- 1. To study the concurrent coplanar force system.
- 2. To study the Stress Strain relation of Mild steel
- 3. To study the Classification of the human bones
- 4. To study different types of joints in human body and joint movements
- 5. To study the Classification of Muscles
- 6. To simulate elbow joint using bell crank lever.
- 7. To study the human gait cycle
- 8. To study the Gait Cycle Parameters
- 9. Fabrication of PTB/socket.

The concerned teachers of the Course BPO can arrange the visit in rehabilitation centre.

		Test 1	Test 2	Avg.	exam					
BMC704	Very Large Scale Integrated Circuits	20	20	20	80	25	-	-	125	

Course Objectives	 To introduce to various fabrication technologies for electronic devices. To expose to hardware description language which will help them to understand and design various tools for the devices.
Course Outcomes	 A Learner will be able to 1. Understand the technology behind the integrated circuits and will be able to design them as for various VLSI applications.

Module	Contents	Time
1.	Introduction to VHDL hardware description language, core features of VHDL, data	08
	types, concurrent and sequential statements, data flow, behavioral, structural	
	architecture. Architecture of Xilinx XC4000 FPGA family	
2.	Combinational and Sequential Logic design using VHDL .Using VHDL	08
	combinational circuit design examples- multipliers, decoders and encoders,	
	cascading comparator. VHDL sequential circuit design features. Implementation of	
	counters and registers in VHDL	
3.	Very Large Scale Integration (VLSI) Technology Physics of NMOS, PMOS,	08
	enhancement and depletion mode transistor, MOSFET, threshold voltage, flatband	
	condition, linear and saturated operation, FET capacitance, short channel and hot	
	electron effect.	
4.	MOS Transistors, MOS transistor switches, Basic MOS inverter and its working,	08
	types of MOS invertors viz active load nMOS inverter, MOSFET Inverter with E-	
	nMOS as pull up, MOSFET Inverter with D- nMOS as pull up, MOSFET Inverter	
	with pMOS as pull up, cmos inverter, voltage transfer characteristics, noise immunity	
	and noise margins, power and area considerations ,Parameter measurement in MOS	
	circuits	
5.	Silicon Semiconductor Technology Wafer processing, mask generation, oxidation,	08

	epitaxy growth diffusion, ion implantation, lithography, etching, metalization, basic	
	NMOS and PMOS processes. Latch up in CMOS and CMOS using twin tub process.	
	Scaling of MOS circuits, types of scaling and limitations of scaling.	
6.	Design rules and Layout NMOS and CMOS design rules and layout, Design of	08
	NMOS and CMOS inverters, NAND and NOR gates. Interlayer contacts, butting and	
	buried contacts, stick diagrams, layout of inverter, NAND and NOR gates. Design of	
	basic VLSI circuits Design of circuits like multiplexer, decoder, priority encoder,	
	Flip flops, shift registers using MOS circuits	

List of Experiments:

- 1. Study of NMOq W modulation of NMOS channel (Using ORCAD or similar software)
- 2. Study of CMOS Inverter characteristics (Using ORCAD or similar software)
- 3. Basic Logic gates (using VHDL)
- 4. Binary to gray and Gray to Binary code conversion(using VHDL)
- 5. Binary to Excess-3 code conversion(using VHDL)
- 6. Implementation of 4:1/8:1 Mux(using VHDL)
- 7. Implementation of 3:8 Deoder(using VHDL)
- 8. Implementation of one bit Half Adder a Full adder (using VHDL)
- 9. Implementation of 4 bit full adder using half adder as component(using VHDL)
- 10. Implementation of JK flip flop(using VHDL)

Text books:

- 1. Introduction to VLSI design, E. D. Fabricus, McGraw Hill Publications, first edition, 1990
- 2. Basic VLSI Design D.A. Pucknell and Eshraghian,
- 3. Digital Design Principles and Practises John F Wakerly,
- 4. CMOS Digital Integrated Circuits, Kang, Tata McGraw Hill Publications

Reference Books:

BMC705	Networking and Information Systems in Medicine	20	20	20	80	25	-	25	150		
		•	•			•		•	•		

Course Objectives	1. To understand the fundamental component of computer Networking.						
_	2. To understand the functioning and configuration of various networking devices						
	and components.						
	To understand a concept about network security.						
	4. To understand the healthcare IT infrastructure and also the prevalent standards in						
	healthcare informatics.						
Course Outcomes	A Learner will be able to						
	1. Design and configure basic computer network.						
	2. Understand the information system of healthcare.						

Module	Contents	Time								
	Networking Technology									
1.	LAN, MAN, WAN, Performance of network/device parameters	08								
	Ethernet Technology: Ethernet types, Types of cables and connectors, Crossover and									
	straight through cables, Colour coding of cables									
OSI Model, TCP/IP, Addressing types (IP, MAC & Port)										
2.	IP V4 addressing, Subnetting, Supernetting, IP V6, Detailed working of networking	08								
	equipment: HUB, Switch, Router, Modem, Bridge; Packet switching, Circuit									
	switching.									
3.	Basic Security Concepts	06								
	Security Mechanism and security services, Authentication, Authorization,									
	Confidentiality, Integrity, Symmetric and Asymmetric Key cryptography, RSA									
	algorithm									
	Information Systems in Medicine									
4.	PACS Components, Generic workflow, PACS architectures stand-alone, client-	10								
	server, and Web-based, PACS and Teleradiology, Enterprise PACS and ePR System									
	with Image Distribution									

5.	Introduction to RIS and HIS, HIS/RIS/PACS integration, PIR, Storage Area Network, Network Attached storage, RAID, PACS Server & Archive and operating systems	08
6.	Introduction to Healthcare informatics standard HL7 and DICOM, IHE, IHE	08
	Domains, Legal issues in PACS, HIPAA.	

List of Experiments:

- 1. Study of various networking cables, demonstration of crimping of cables and configuring networking parameters for computer.
- 2. Tutorial on IP addressing.
- 3. Introduction and basic commands used in various network simulation software.
- 4. Internetwork Communcation through Router and Switch, See the Mac Table of each switch and Routing table of Router
- 5. Static routing configuration.
- 6. Generating the HL7 message format.

Text books:

- 1. PACS and Imaging Informatics by Huang, Second Edition, Wiley and Blackwell
- 2. PACS Guide to Digital Revolution by Keith J. Dreyer (Springer)
- 3. Data Communication and Networking by Behrouz A. Forouzan McGrow Hill
- 4. Computer Networks by A.S. Tanenbaum, Pearson Education

Reference Books:

- 1. Governance of Picture Archiving and Communications Systems by Carrison K.S. Tong (Medical Information Science Reference)
- 2. Practical Imaging Informatics, By Barton F. Branstetter, Springer
- 3. PACS fundamentals- By Herman Oosterwijk
- 4. Cryptography and Network Security By William Stalling, Pearsons

Internal Assessment (IA):

Two tests must be conducted which should cover at least 80% of syllabus. The average marks of both the tests will be considered for final Internal Assessment.

End Semester Examination:

Question paper will comprise of 6 questions, each carrying 20 marks.

The Learners need to solve total 4 questions.

Question No.1 will be compulsory and based on entire syllabus.

Remaining question (Q.2 to Q.6) will be selected from all the modules.

Term Work:

Term work consists of minimum eight experiments. The distribution of the term work shall be as follows:

Laboratory work (Experiments and Journal)	:20 marks
Attendance (Practical and Theory)	:05 marks

Course Code	Course Nome	Tea	ching Schei	Credits Assigned				
	Course Maine	Theory	Pract.	Tut	Theory	Pract.	Tut	Total
BMP706	Project Stage - I	-	*	-	-	3	-	3

* Learner is allotted 6hrs per week for the project work.

Course Code	Course Name	Examination scheme								
			Theory	0	•					
		Internal Assessment E				nd Term work	Pract.	Oral	Total	
		Test 1	Test 2	Avg.	exam					
BMP706	Project Stage - I	-	-	-	X	25	-	25	50	

Guidelines for Project

• Learners should do literature survey/visit industry/analyze current trends and identify the problem for Project and finalize in consultation with Guide/Supervisor. Learners should use multiple literatures and understand the problem. Learners should attempt solution to the problem by experimental/simulation methods. The solution to be validated with proper justification and compile the report in standard format.

Guidelines for Assessment of Project I

- Project I should be assessed based on following points
 - Quality of problem selected
 - Clarity of Problem definition and Feasibility of problem solution
 - Relevance to the specialization
 - Clarity of objective and scope
- Project II should be assessed through a presentation jointly by Internal and External Examiners approved/appointed by the University of Mumbai

Project Guidelines

Project Groups: Learners can form groups with minimum 2 (Two) and not more than 4 (Four)

Faculty Load: In semester VII – 1/2 (half) period of 1/2 hour per week per project group

Each faculty is permitted to take (guide) maximum 4 (Four) project groups.

Syllabus Scheme for B.E. Semester VIII Biomedical Engineering

Course Objectives	1. To enable the learners to understand the basic science of nuclear medicine,
	operating principles and quality control aspects of various nuclear medicine
	equipment.
	2. To keep the Learners abreast with the technological developments in the field of
	nuclear medicine.
Course Outcomes	A Learners will able to
	1. Understand essential physics, concepts of radiopharmaceuticals and how they are
	employed in nuclear medicine diagnosis and therapy.
	2. Be familiar with the current In-vivo and In-vitro techniques of nuclear medicine
	along with their clinical applications.
	3. Apprehend the importance of radiation safety and radioactive waste management.

Module	Contents	Time
1.	Basics of Nuclear Physics: Radioactivity, Radioactive Decay Law, Radioactive	10
	Decay Processes, Units of Radioactivity Measurement, Successive Decay	
	Equations. Statistics of Counting, Interaction of Radiation with Matter	
	Production of Radionuclide:	
	Methods of radionuclide production: Nuclear Reactor, Medical Cyclotron &	
	Radionuclide Generators	
	Spectra of commonly used radio nuclides e.g. I-131, Tc-99m, Cr-51, Cs-137.	
	Problems in radiation measurements.	
2.	Radiopharmaceuticals: Ideal Radiopharmaceutical, Methods of Radiolabeling	08
	Internal Radiation Dosimetry: Absorbed Dose Calculations to Target & Non-	
	Target Tissues, MIRD Methodology	
	Radiation Safety:	
	Natural & Artificial Radiation Exposure, External & Internal Radiation Hazard,	
	Methods of Minimizing External Exposure, Methods of Preventing Internal	
	Exposure, Evaluation of External & Internal Hazard, Biological Effects of	
	Radiation, Radioactive Waste Management,	

	Ethics in Nuclear medicine.	
3.	Detectors in Nuclear Medicine & Counting and Measuring System:	10
	Gas filled Detectors, Scintillation Detectors and Solid State Detectors,	
	Scintillation Counting System, Gamma Ray Spectrometry, Radionuclide Dose	
	Calibrator, Properties of Detectors.	
	In Vitro techniques(Brief Description):	
	Introduction, Single and Double Isotope method, Radioimmunoassay, RIA	
	Counting System, Liquid scintillation Counting system, RIA	
	Applications.	
4.	In Vivo Techniques:	09
	General Principle, Uptake Monitoring System, Rectilinear Scanner, Gamma	
	Camera Fundamentals, Position Circuitry and working, Computer Interface,	
	Performance Parameters, Quality Control Functions	
5.	Emission Tomography Techniques and Clinical Applications:	08
	Introduction, Principles and applications of SPECT, Principles and applications of	
	PET, System performance parameters and Quality Control Functions.	
	Introduction to Hybrid Modalities:	
	PET/CT, SPECT/CT	
	Clinical Applications	
	Clinical Applications of PET, SPECT and Hybrid Modalities in Cardiology,	
	Neurology and Oncology.	
6.	Radionuclide Therapy	03
	Choice of a Radionuclide in Therapeutic Nuclear Medicine	
	Treatment of Benign & Malignant Diseases	
	Palliative & Curative Procedures:	

- 1. Textbook of Nuclear medicine: J. Harbert and A.F.G. Rocha, Second Edition, Lea& Febiger.
- 2. Handbook of Nuclear medicine Instruments, B.R. Bairi, Balvinder Singh, N.C. Rathod and P.V. Narurkar, Tata McGraw Hill.
- 3. Fundamentals of Nuclear Pharmacy, Gopal B. Saha, Springer Science Business Media
- 4. Introductory Physics of Nuclear Medicine, Ramesh Chandra, Lea& Febiger

Reference Books:

- 1. Medical Radiation Physics William R. Hendee, , Year Book Medical Publishers
- 2. Instrumentation of Nuclear medicine G. Hine, , Academic Press
- 3. Radiation Detection & Measurement Glenn F. Knoll, , John Wiley & Sons.

Internal Assessment (IA):

Two tests must be conducted which should cover at least 80% of syllabus. The average marks of both the tests will be considered for final Internal Assessment.

End Semester Examination:

Question paper will comprise of total 6 questions, each of 20 marks.

Only 4 questions need to be solved.

Q.1 will be compulsory and based on the entire syllabus.

Remaining questions will be mixed in nature.

In question paper weightage of each module will be proportional to the number of respective lecture hours as mentioned in the syllabus.

Term Work:

Term work consists of minimum eight experiments / assignments and one presentation based on any topic on the recent trends in the Course . Learners are supposed carryout thorough literature survey, collect data and prepare their presentation.

The distribution of the term work shall be as follows:

Laboratory work (Experiments / assignment and Journal):10 marks Presentation :10 marks

Attendance (Practical and Theory)

:05 marks

Course Code	Course Nome	Tea	ching Schei	me	(Credits A	ssigned

1. To understand various fabrication technology for MEMS devices.
2. To apply the knowledge of MEMS in Biomedical field.
3. To understand recent advancements in Biomedical Engineering for a
successful career in the area of nanotechnology.
A learner will be able to
1. Use the knowledge of MEMS to develop various miniaturized Biomedical
devices.

Module	Contents	Time
1.	BASICS OF MINIATURIZATION & MATERIALS	08
	Dimensional effect on engineering systems	
	Clean room classification	
	Scaling Laws in Miniaturization	
	MEMS & Micro system products	
	Substrates and Wafers	
	Properties of Silicon Compounds SiO2, Si3N4, Polysilicon, Amorphous silicon	
	Polymers: Dielectric polymers, Conducting polymers, and piezoelectric polymers	
2.	MEMS FABRICATION PROCESSES	16
	Fabrication techniques in MEMS: Bulk micromachining, Surface micromachining,	
	and LIGA	
	Cleaning processes: RCA, Piranha	
	Deposition processes for metals: e-beam evaporation, thermal evaporation and DC	
	Sputter	
	Deposition processes for dielectrics: Physical (RF Sputter) and Chemical Techniques	
-	(CVD: APCVD, LPCVD, PECVD, and HWCVD).	
	Polymers coating techniques: spinning, spraying and electrodeposition	

	Photolithography: light sources (UV, DUV, and EUV), photoresist, mask design and	
	fabrication using EBL, dark and bright field photo-mask, different projection systems	
	in lithography, detailed study of lithography process, study of fabrication processes	
	like optical grating structure, SiO2 cantilever, SiNx cantilever and basics of EBL	
	Etching Processes : Dry (RIE, DRIE) and wet etching	
	Doping – ion implantation and diffusion	
	Soft lithography: Micro contact Printing, Imprinting or hot embossing, and Replica	
	Molding	
	Surface characterization techniques: AFM, SEM, Profilometer, Elipsometer, Fluorimeter	
3.	MICRO TOTAL ANALYSIS SYSTEMS (µTAS)	08
	Basic block diagram: importance of µ-TAS	
	Flow techniques in µ-fluidics: pressure driven force, electro-kinematics; electro-	
	osmosis, electrophoresis, dielectrophoresis	
	Components in μ -TAS: Micropump, microvalves, microchannels	
	μ-TAS: separation and mixing techniques fabrication of micro channels: SUS channel glass channel silicon channel	
	radication of incro-channels. 508 channel, glass channel, sincon channel	
4.	MICRO/ NANO BIOSENSORS	08
	Biosensor: definition, block diagram and working	
	Classification based on the basis of detection techniques: Electric	
	Magnetic, Optical, Thermal, Mechanical, and Chemical.	
	Basic steps involved in the development of biosensors: surface modification,	
	Examples: (i) Design fabrication of SiO cantilever for antibody detection (ii)	
	Design, fabrication of Optical waveguide biosensor, (iii) Microfluidics based	
	biosensor	
5.	DRUG DELIVERY DEVICES	04
	Overview of drug delivery systems, Types of drug delivery systems, Different parts	
	of drug delivery system, MEMS based drug delivery systems: Implantable drug	
	delivery systems (IDDS), Micro needles and its fabrication, Micro particles for oral	
	drug delivery	
6.	MICROSYSTEM PACKAGING	04
	Importance of packaging	
	Packaging materials	
	Packaging techniques	
	Wafer bonding	
List of	Experiment/ Tutorials:	
1.L	iterature review on MEMS technology and growth	

List of Experiment/ Tutorials:

2. Materials in MEMS technology: Single crystal Silicon, Dielectrics, and metals

- 3.Numericals on Polymer spinning, Dry and Wet oxidation
- 4.Detailed fabrication process for SiO2 cantilever
- 5.Importance of soft-lithography with example (compare with traditional method)
- 6.Different flow techniques in µ-TAS
- 7.Detailed fabrication process for glass-glass microfluidic channel
- 8.Design, fabrication of Biosensor (all three listed in Chapter 6)
- 9.Drug delivery systems
- 10. Over view on MEMS packaging

- 1. MEMS & Microsystems: Design, Manufacture, and Nanoscale Engineering, 2nd Edition Tai-Ran Hsu, ISBN: 978-0-470-08301-7

o promote the development of high quality of hospital care in the community.
To provide a satisfactory environment to the patient and also to the doctors for
linical research.
To understand the design considerations in a hospital for designing of various
epartments in the hospital.
o develop skills enabling Biomedical Engineers to serve Hospitals, National and
nternational Industries and Government Agencies.
o understand the role of Biomedical Engineer in hospitals.
earner will be able to
Inderstand and apply resource management concepts (personnel, finance, and
naterial resources) and the processes and strategies needed in specific hospital
ectors.
Communicate effectively and develop their leadership and teambuilding abilities.
Apply modern change management and innovation management concepts to
ptimize structures.
Analyze existing hospital service policies and enhance their alignment within the
ocal and national context.

Module	Contents	Time
1.	Process of management:	10
	Principles of management, Leadership, Motivation, Time management,	
	Communication in hospital, H.R. management (Recruitment, Performance appraisal,	
	Reward management, Training and development, Conflict resolution and labor	
	relations), Accounting - Types of Budget	
2.	Organization of the hospital & Hospital Planning:	06
	Management structure, Types of hospitals, Governing body, Hospital committee and	
	hospital functionaries ,Duties and responsibilities of various positions	
	Guiding principles in planning hospital facilities and services and planning the	
	hospital building	
3.	Planning for Clinical and Supportive Services :	14

A) Clinical Services: Emergency, IN patient, OUT patient, Intensive care unit, Operation Theatre, Laboratory, Blood Bank, Radiology B) Utility/Supportive services: Registration Medical record department, Central Sterile Service Dept, Pharmacy, Laundry and Linen Medical social service Dept. Internal Assessment (IA):

Two tests must be conducted which should cover at least 80% of syllabus. The average marks of both the tests will be considered for final Internal Assessment.

End Semester Examination:

Question paper will comprise of 6 questions, each carrying 20 marks. The Learners need to solve total 4 questions. Question No.1 will be compulsory and based on entire syllabus. Remaining question (Q.2 to Q.6) will be selected from all the modules.

Term Work:

Term work consists of minimum eight experiments / assignments and one presentation based on the any one department in the hospital. Learners are supposed to visit hospital, collect data and prepare their presentation.

The distribution of the term work shall be as follows:

Laboratory work (Experiments / assignment and Journal):10 marks Presentation :10 marks Attendance (Practical and Theory) :05 marks

Course	Course Nome	Tea	ching Schei	Credits Assigned				
Code	Course Name	Theory	Pract.	Tut	Theory	Pract.	Tut	Total
BME8011	Elective: Lasers and Fiber Optics (abbreviated as LFO)	4	2	-	4	1	-	5
							C	

	Course Name	Examination scheme								
Course		Theory Marks								
Code		Internal Assessment			End	Term work	Pract.	Oral	Total	
		Test 1	Test 2	Avg.	exam	m				
BME8011	Lasers and Fiber Optics	20	20	20	80	25	-	25	150	

Course Objectives	 To understand the fundamentals in Laser and Fiber Optics. To understand the applications of Laser and Fiber optics in health sector.
Course Outcomes	 A Learners will be able to 1. Understand the fundamentals and clinical applications of Laser and Fiber Optics. 2. Correlate the knowledge of medicine and engineering for the wellness of human being. 3. Understand the safety aspects while dealing with Laser and Fiber Optic Units.

	Module	Contents	Time				
	1.	Laser Fundamentals	10				
		Fundamental wave properties and quantum properties of light, Energy levels and					
		Radiative properties, Absorption and Stimulated Emission, Laser Amplifiers, Laser					
		Oscillation above threshold, Requirements for obtaining Population Inversion, Laser					
		pumping requirements and techniques, Laser Resonators, Cavity modes, Laser					
		interaction with tissue- Effects and principles, Thermal interaction between laser and					
		tissue.					
	2.	Laser Types , construction and working	10				
		Laser system involving low density gain medium: He-Ne laser, Argon Ion Laser, He-					
		Cadmium laser, Carbon dioxide Laser, Excimer laser, Nitrogen Laser					
		Laser system involving high density gain medium: Solid State laser like Ruby laser,					
		Nd-YAG Laser, Titanium Sapphire Laser, Fiber Lasers, Semiconductor Diode Laser					
	3.	Laser safety:	06				
		Practical Laser Safety requirements, Environmental safety, Equipment safety,					
		personnel protection, Education/training for handling laser equipments, Role of Laser					
	Safety officer, Standards of practice for the use of Laser in medicine and Surgery,						
		Recommendation Regarding the Laser safety officer, Hospital Laser Committee					
•	4.	Optic Fibers Fundamentals	10				

	Light transmission in optical fibers- principles, optical properties of optical fibers,	
	Fiber materials, Types of Optical fibers, Modes, Losses, Fabrication of optical	
	fibers, Methods and Principle, Fiber Splicing, Fiber optic imaging, Biomedical	
	Optical fibers, Invivo Applications.	
5.	Laser and Fiber Optics in surgery	06
	Introduction, fiber optic laser systems in cardiovascular disease,	
	gastroenterology, gynecology, neurosurgery, oncology, ophthalmology,	
	orthopedics, otolaryngology (ENT), urology, and flow diagram for laser	
	angioplasty ,Laser and Fiber optics used in Skin	
6.	Endoscopy	06
	Basic Principle, System components and functions, Types of endoscopes, Video	
	Endoscopes, Accessories, Maintenance, Endoscopy Processing room requirements,	
	Medical Application, Leakage tester and Trouble shooting

BME8012	Robotics in Medicine	20	20	20	80	25	-	25	150	

Course Objectives	1. To introduce to basics of Robotics, Kinematics, Inverse Kinematics, vision and
	motion planning.
	2. To introduce to various applications of Robots in Medicine.
Course Outcomes	A Learner will be able to
	1. Design basic Robotics system and formulate Kinematic, Inverse Kinematic
	motion planning solutions for various Robotic configurations.
	2. Design Robotic systems for Medical application.

Module	Contents	Time
1.	Introduction	06
	Automation and Robots, Classification, Application, Specification, Notations	
2.	Direct Kinematics Dot and cross products, Coordinate frames, Rotations,	08
	Homogeneous coordinates Link coordination arm equation, (Five- axis robot, Four- axis robot, Six-axis robot)	
3.	Inverse Kinematics General properties of solutions tool configuration Five axis robots, Three-Four axis, Six axis robot(Inverse Kinematics). Workspace analysis and	10
	trajectory planning work envelope and examples, workspace fixtures, Pick and place operations, Continuous path motion, Interpolated motion, Straight-line motion.	
4.	Robot Vision Image representation, Template matching, Polyhedral objects, Shane analysis, Segmentation (Thresholding, region labeling, Shrink operators, Swell operators, Euler numbers, Perspective transformation, Structured illumination	10
	Camera calibration).	
5.	Task Planning Task level programming, Uncertainty, Configuration, Space, Gross motion, Planning, Grasp Planning, Fine-motion planning, Simulation of planar motion, Source and Goal scenes, Task Planner simulation.	08
6.	Applications in Biomedical Engineering Application in rehabilitation, Clinical and Surgery	06

Course Objectives	1. To understand the healthcare interoperability semantic and syntactic.			
	2. To understand the standards of healthcare interoperability standards for Medical			
	Images and Medical Messages.			
Course Outcomes	A learner will be able to			
	1. Fabricate information messages associated with healthcare event.			
	2. Fabricate and understand the information exchange messages for transfer of			
	medical image data.			

	Module	Contents	Time
	1.	Healthcare Interoperability	04
		Introduction: Standards In Healthcare System, Categorizing Standards, Standard	
		Development, Various Healthcare Informatics Standards	
	2.	XML	06
		The Need for XML, Concepts and Definition, XML Syntex, Content Of an XML	
		Document, Structure of an XML document, Validation, Access to the content of the	
		Document	
	3.	Health Level 7	10
		HL7 version 2.X, Message communication Concept, Segments, Fields, Components,

Course Objectives	1. To introduce learners to basics of Kinetics and Kinematics, Flow properties of
	blood and give overview of Rehabilitation Engineering.
Course Outcomes	A learner will be able to
	1. Build foundation for learners enabling the learners to pursue higher studies with
	specialization in Rehabilitation Engineering.

Module	Contents	Time
1.	Introduction and socio-legal aspects of Rehabilitation Engineering: Medical Rehabilitation, Epidemiology of Rehabilitation, preventive Rehabilitation, Impairment Disability and Handicap. Delivery of Rehabilitation Care: The team-Medical, Paramedical, Socio-vocational	06
2.	Orthotics, Amputation, and Prosthetics, Activities of Daily Living (ADL): Orthotics: General Principles of Orthotics, Biomechanics of orthotics, Classification: Upper & Lower Extremity orthotics, spinal Orthotics Amputation & Prosthetics: Causes of Amputation, Types of Amputation, and Levels of Amputation for upper and lower Extremity. Preoperative and post-operative period. Pre-prosthetic stage. Endo & Exo-skeletal Prosthetics. Classification: Upper & lower limb Prosthetics Activities of Daily Living: ADL grouping, Barthel's Index of ADL. Functional Independence, Measures, Environmental control system, communication, ADL training.	13
3.	Mechanical principles of Kinematics and Kinetics: Planar classification of position and motion, Rotary and translatory motion, Degree of freedom, Kinematic Chain Theories of motion, Levers, Torque, Parallel force, Resolution of force, Calculation of muscle and joint forces Clinical application on weight and center of gravity ,applied weights and resistance,	08

	muscle force and leverage, joint forces, Clinical application on stretching versus joint mobilization	
4.	Flow properties of blood: An outline of Blood Rheology, Constitutive equation of	08
	blood based viscometric Data and Casson's equation, laminar flow of blood in a tube,	
	fluid mechanical interaction of RBCs with a solid wall, thrombus formation and	
	dissolution, medical application of Blood Rheology	
5.	Common deformities and role of surgery in rehabilitation engineering. Types of	05
	deformities, Management of 1 st and 2 nd degree deformities. Common deformities of	
	lower limb. Treatment for partial foot deformities. Deformities of the foot. Arm	
	deformities. Torticollis	
6.	An overview of rehabilitation of muscular dystrophy, paraplegia, and	08
	quadriplegia: Muscular Dystrophy, Duchenne Muscular Dystrophy, Rehabilitation,	
	facioscapulohumeral Muscular Dystrophy	
	Paraplegia: Etiology, mechanism of injury, Identification of level of lesion,	
	Management of active spinal cord injury, Rehabilitation, Gait training	
1	Quadriplegia: Mobility, Training, Level of injury & outcome, Management	

3. BRUNNSTROM'S CLINICAL KINESIOLOG, By Laura K Smith, Elizabeth Laurance

BMP805	Project Stage – II	-	-	-		50	-	100	150

** Learner is allotted 12hrs per week for the project work.

Guidelines for Project

• Learners should do literature survey/visit industry/analyze current trends and identify the problem for Project and finalize in consultation with Guide/Supervisor. Learners should use multiple literatures and understand the problem. Learners should attempt solution to the problem by experimental/simulation methods. The solution to be validated with proper justification and compile the report in standard format.

Guidelines for Assessment of Project II

- Project II should be assessed based on following points
 - Quality of problem selected
 - Clarity of Problem definition and Feasibility of problem solution
 - Relevance to the specialization / Industrial trends
 - Clarity of objective and scope
 - Quality of work attempted
 - Validation of results
 - Quality of Written and Oral Presentation
- Report should be prepared as per the guidelines issued by the University of Mumbai.
- Project II should be assessed through a presentation jointly by Internal and External Examiners approved by the University of Mumbai.
- Learners should be motivated to publish a paper based on the work in Conferences/students competitions.

Project Guidelines

Project Groups: Learners can form groups with minimum 2 (Two) and not more than 4 (Four)

Faculty Load: In semester VIII - 1 (One) periods of 1 hour each per week per project group Each faculty is permitted to take (guide) maximum 4 (Four) project groups.
