

UNIVERSITY OF MUMBAI

Bachelor of Engineering
Electronics Engineering

Final Year Engineering
(Sem. VII and VIII), Revised course
(REV- 2012) effective from Academic Year 2015 -16

Under

FACULTY OF TECHNOLOGY

(As per Semester Based Credit and Grading System)

From Dean's Desk:

To meet the challenge of ensuring excellence in engineering education, the issue of quality needs to be addressed, debated and taken forward in a systematic manner. Accreditation is the principal means of quality assurance in higher education. The major emphasis of accreditation process is to measure the outcomes of the program that is being accredited. In line with this Faculty of Technology of University of Mumbai has taken a lead in incorporating philosophy of outcome based education in the process of curriculum development.

Faculty of Technology, University of Mumbai, in one of its meeting unanimously resolved that, each Board of Studies shall prepare some Program Educational Objectives (PEO's) and give freedom to affiliated Institutes to add few (PEO's) and course objectives and course outcomes to be clearly defined for each course, so that all faculty members in affiliated institutes understand the depth and approach of course to be taught, which will enhance learner's learning process. It was also resolved that, maximum senior faculty from colleges and experts from industry to be involved while revising the curriculum. I am happy to state that, each Board of studies has adhered to the resolutions passed by Faculty of Technology, and developed curriculum accordingly. In addition to outcome based education, semester based credit and grading system is also introduced to ensure quality of engineering education. Semester based Credit and Grading system enables a much-required shift in focus from teacher-centric to learner-centric education since the workload estimated is based on the investment of time in learning and not in teaching. It also focuses on continuous evaluation which will enhance the quality of education. University of Mumbai has taken a lead in implementing the system through its affiliated Institutes and Faculty of Technology has devised a transparent credit assignment policy and adopted ten points scale to grade learner's performance. Credit assignment for courses is based on 15 weeks teaching learning process, however content of courses is to be taught in 12-13 weeks and remaining 3-2 weeks to be utilized for revision, guest lectures, coverage of content beyond syllabus etc.

Credit and grading based system was implemented for First Year of Engineering from the academic year 2012-2013. Subsequently this system will be carried forward for Second Year Engineering in the academic year 2013-2014, for Third Year and Final Year Engineering in the academic years 2014-2015 and 2015-2016 respectively.

Dr. S. K. Ukarande
Dean,
Faculty of Technology,
Member - Management Council, Senate, Academic Council
University of Mumbai, Mumbai

Preamble:

In the process of change in the curriculum there is a limited scope to have major changes in the fundamental subjects which are mainly part of second year of engineering. The exposure to the latest technology and tools used all over the world is given by properly selecting subjects and their hierarchy in pre-final and final year. Thus this syllabus is made to groom the undergraduate students best suited and competent in all respect with best possible efforts put in by the experts in framing detail contents of individual subjects.

The engineering education in India is expanding in manifolds and the main challenge is the quality education. All the stakeholders are very much concerned about it.

The institution or program of study is committed and open to external review to meet certain minimum specified standards. The major emphasis of this process is to measure the outcomes of the program. Program outcomes are essentially a range of skills and knowledge that a student will have at the time of graduation.

So the curriculum must be constantly refined and updated to ensure that the defined objectives and outcomes are achieved. Students must be encouraged to comment on the objectives and outcomes and the role played by the individual courses in achieving them. In line with this Faculty of Technology of University of Mumbai has taken a lead in incorporating philosophy of outcome based education in the process of curriculum development.

I, as Chairman, Board of Studies in Electronics Engineering University of Mumbai, happy to state here that, heads of the department and senior faculty from various institute took timely and valuable initiative to frame Program Educational Objectives as listed below.

1. To provide students with a strong foundation in the mathematical, scientific and engineering fundamentals necessary to formulate, solve and analyze engineering problems and to prepare them for graduate studies.
2. To prepare students to demonstrate an ability to identify, formulate and solve electronics engineering problems.
3. To prepare students to demonstrate ability to design electrical and electronics systems and conduct experiments, analyze and interpret data.
4. To prepare students to demonstrate for successful career in industry to meet needs of Indian and multi-national companies.
5. To develop the ability among students to synthesize data and technical concepts from applications to product design.
6. To provide opportunity for students to work as part of teams on multidisciplinary projects.
7. To promote awareness among students for the life-long learning and to introduce them to professional ethics and codes of professional practice.

These are the suggested and expected main objectives and individual affiliated institute may add further in the list. In addition to Program Educational Objectives, for each course of undergraduate program, objectives and expected outcomes from learner's point of view are also included in the curriculum to support the philosophy of outcome based education. I believe strongly that small step taken in right direction will definitely help in providing quality education to the stake holders.

The subjects offered to undergraduate students in final year are at par to the requirement of industry. The students are also made competent to appear for various competitive examination conducted in India and abroad. The subjects offered are at enough level to

prepare a base of the students to understand and learn latest state of technology. The students are trained in such a way that they become versatile in hardware and software simulation. Some subjects offered upgrades them in the field of information and technology which is a need of today's era.

At the end I must outset extend my gratitude to all experts who contributed to make curriculum competent at par with latest technological development in the field of electronics engineering.

Dr. D. G. Borse
Chairman, Board of Studies (Electronics Engineering)

Course Pre-requisite:

- EXC403: Microprocessor and Peripherals
- EXC501: Microcontroller & Applications

Course Objectives:

1. To teach scope, usage, requirements, challenges and general design methodology of embedded system
2. To apply hardware and software knowledge to develop embedded system applications according to requirement and constraints

Course Outcomes:

After successful completion of the course student will be able to

1. interpret component's functional and electrical specifications and its implication and advantage in design.
2. develop their skill to select/choose proper components, approach, and method to develop optimal system.

Module No.	Unit No.	Topics	Hrs.
1		Fundamentals of Embedded System	8
	1.1	Core of the embedded system, Memory, Sensors (resistive, optical, position, thermal) and Actuators (solenoid valves, relay/switch, opto-couplers), Communication Interface, Embedded firmware (RTOS, Drivers, Application programs), Power-supply (Battery technology, Solar), PCB and Passive components, Safety and reliability, environmental issues. Ethical practice.	
	1.2	Characteristics and quality attributes (Design Metric) of embedded system. Real time system's requirements, real time issues, interrupt latency.	
	1.3	Embedded Product development life cycle, Program modeling concepts: DFG, FSM, Petri-net, UML	
2		Embedded Serial Communication	4
	2.1	Study of basic communication protocols like SPI, SCI (RS232, RS485), I ² C, CAN, Field-bus (Profibus), USB (v2.0), Bluetooth, Zig-Bee, Wireless sensor network	
3		Embedded Hardware and Design	12
	3.1	Low power hardware design (MSP430 / Cortex-M3 based Real time clock and PWM dc motor control as a case study using on chip timers and watch-dog-timers).	
	3.2	Introduction to ARM-v7-M (Cortex-M3), Comparison of ARM-v7-A (CortexA8), ARM-v7-R (CortexR4), ARM-v7-M (Cortex-M3)	
	3.3	Direct digital solution using CPLD, FPGA, its advantages, and introduction to related development methodology	
4		Embedded Software, Firmware Concepts and Design	16
	4.1	Embedded C-programming concepts (from embedded system point of view): Optimizing for Speed/Memory needs, Interrupt service routines, macros, functions, modifiers, data types, device drivers, Multithreading programming. (Laboratory work on J2ME Java mobile application).	
	4.2	Basic embedded C programs/applications for ARM-v7, using ARM-GCC-tool-chain, Emulation of ARM-v7 (e.g. using QEMU), and Linux porting on ARM-v7 (emulation) board	
	4.3	Real time operating system: POSIX Compliance , Need of RTOS in Embedded system software, Foreground/Background systems, multitasking, context switching, IPC, Scheduler policies, Architecture of kernel, task scheduler, ISR, Semaphores, mailbox, message queues, pipes, events, timers, memory management, RTOS services in contrast with traditional OS.	
	4.4	Introduction to μ COS-II RTOS, study of kernel structure of μ COS-II, Synchronization in μ COS-II, Inter-task communication in μ COS-II, Memory management in μ COS-II, porting of RTOS on ARM-v7 (emulation) board, Application developments using μ COS-II.	
	4.5	Introduction Linux OS, Linux IPC usage, basic device (drivers) usage.	
5		Simulation, Testing and Debugging Methodology and Tools	04
	5.1	GNU Debugger (gdb), Boundary-Scan/JTAG interface concepts, Black-box, White-box testing, Hardware emulation, logic analyzer.	
6		Embedded System Designing	08
	6.1	Requirement analysis, Hardware blocks diagram, System model (like FSM, UML), Software architectures (modules, drivers), and Component/hardware selection, covering following cases: Hard real time/ Mission critical: Missile, Car cruise control, medical monitoring systems, process control system (temp, pressure) Soft real time: Automated vending machines, digital camera, media-player. Communication: Embedded web servers, routers, Wireless (sensor) networks.

Internal Assessment (IA):

Two tests must be conducted which should cover at least 80% of syllabus. The average marks of both the test will be considered for final internal assessment.

End Semester Examination:

1. Question paper will comprise of 6 questions, each of 20 marks.
2. Total 4 questions need to be solved.
3. Question No.1 will be compulsory and based on entire syllabus wherein sub questions of 2 to 5 marks will be asked.
4. Remaining question will be selected from all the modules.

Course Pre-requisite:

- EXC302: Electronic Devices
- EXC303: Digital Circuits and Design
- EXC402: Discrete Electronic Circuits
- EXC502: Design With Linear Integrated Circuits
- EXC601: VLSI Design

Course Objectives:

1. To teach fundamental principles of fabrication of VLSI devices and circuits
2. To disseminate knowledge about novel VLSI devices

Course Outcomes:

After successful completion of the course student will be able to

1. demonstrate a clear understanding of CMOS fabrication flow and technology scaling
2. demonstrate a clear understanding of various MOS fabrication processes, semiconductor measurements, packaging, testing and advanced semiconductor technologies
3. discuss physical mechanism in novel devices
4. verify processes and device characteristics via simulations

Module No.	Unit No.	Topics	Hrs.
1.0		Environment and Crystal Growth for VLSI Technology	8
	1.1	Environment: Semiconductor technology trend, Clean rooms, Wafer cleaning	
	1.2	Semiconductor Substrate: Phase diagram and solid solubility, Crystal structure, Crystal defects, Czochralski growth, Bridgman growth of GaAs, Float Zone growth, Wafer Preparation and specifications	
2.0		Fabrication Processes Part 1	10
	2.1	Deposition: Evaporation, Sputtering and Chemical Vapor Deposition	
	2.2	Epitaxy: Molecular Beam Epitaxy, Vapor Phase Epitaxy, Liquid Phase Epitaxy, Evaluation of epitaxial layers	
	2.3	Silicon Oxidation: Thermal oxidation process, Kinetics of growth, Properties of Silicon Dioxide, Oxide Quality, high κ and low κ dielectrics	
	2.4	Diffusion: Nature of diffusion, Diffusion in a concentration gradient, diffusion equation, impurity behavior, diffusion systems, problems in diffusion, evaluation of diffused layers	
	2.5	Ion Implantation: Penetration range, ion implantation systems, process considerations, implantation damage and annealing	
3.0		Fabrication Processes Part 2	10
	3.1	Etching: Wet chemical etching, dry physical etching, dry chemical etching, reactive ion etching, ion beam techniques	
	3.2	Lithography: Photoreactive materials, Pattern generation and mask making, pattern transfer, Electron beam, Ion beam and X-ray lithography	
	3.3	Device Isolation, Contacts and Metallization: Junction and oxide isolation, LOCOS, trench isolation, Schottky contacts, Ohmic contacts, Metallization and Packaging	
	3.4	CMOS Process Flow: N well, P-well and Twin tub	
	3.5	Design rules, Layout of MOS based circuits (gates and combinational logic), Buried and Butting Contact	
4.0		Measurements, Packaging and Testing	10
	4.1	Semiconductor Measurements: Conductivity type, Resistivity, Hall Effect Measurements, Drift Mobility, Minority Carrier Lifetime and diffusion length	
	4.2	Packaging: Integrated circuit packages, Electronics package reliability	
	4.3	Testing: Technology trends affecting testing, VLSI testing process and test equipment, test economics and product quality	
5.0		SOI, GaAs and Bipolar Technologies	08
	5.1	SOI Technology: SOI fabrication using SIMOX, Bonded SOI and Smart Cut, PD SOI and FD SOI Device structure and their features	
	5.2	GaAs Technologies: MESFET Technology, Digital Technologies, MMIC technologies, MODFET and Optoelectronic Devices	
	5.3	Silicon Bipolar Technologies: Second order effects in bipolar transistor, Performance of BJT, Bipolar processes and BiCMOS	
6.0		Novel Devices	06
	6.1	Multigate Device: Various multigate device configurations (device structure and important features)	
	6.2	Nanowire: Fabrication and applications	
	6.3	Graphene Device: Carbon nanotube transistor fabrication, CNT applications

- EXC 404: Principles of Control Systems

Course Objectives:

1. To enhance and expand the ideas of students for more complex power electronic systems.
2. To teach the analytical methods in power electronic systems.
3. To expose the students to various applications of power electronics in various electronics equipments and drives.

Course Outcomes:

After successful completion of the course students will be able to:

1. Thoroughly understand the modern methods of analysis and control of power electronic systems.
2. Carry out the theoretical analysis of the power electronic systems from the 'Systems Theory' point of view.
3. Appreciate the ubiquity of power electronics systems in engineering fields
4. Simulate and analyze power electronic systems

Module No.	Unit No.	Topics	Hrs.
1		Rectifiers and Inverters:	12
	1.1	Effect of source inductance in 1-phase and 3-phase rectifiers, distortion in line current waveforms, voltage distortion for diode and SCR based rectifiers	
	1.2	PWM for 3-phase voltage source inverters, Space Vector Modulation (SVM) technique for 3-phase voltage source inverters, hysteresis control.	
2		DC-DC Converters:	10
	2.1	Average model, linearized and transfer function models, state-space average models of basic buck, boost and buck-boost converters, Feedback control of these converters (PI and PID).	
3		Power Electronic Applications	06
	3.1	Use of power electronic systems in SMPS, Battery charging systems, UPS and Induction heating.	
4		Power Electronic Applications in DC Drives	10
	4.1	Various schemes of DC motor speed control, single-phase half-wave semi converter & full converter drive for separately excited DC motor, Dynamic and Regenerative braking of DC motor	
5		Power Electronic Applications in AC Drives	14
	5.1	Introduction to speed control of three-phase induction motor methods: i) Stator voltage ii) Variable frequency iii) Rotor resistance iv) V/f control v) Regenerative braking.

Pre requisite :

- EXC 405: Fundamentals of Communication Engineering
- EXC:504: Digital Communication

Course Objective:

1. To ensure that students have the necessary networking skills to design, implement and analyze communication networks.
2. Students will be able to design, implement, and analyze communication networks.

Course Outcome: After Completing this course student will be able to

1. Understand the fundamentals of communication and Computer networks.
2. Have the capability of designing and analyzing data transmission protocols and data link control protocols.
3. Able to discuss major trends in industry and current research activities within the discipline.
4. Able to implement networking protocols using TCP/IP based on socket programming.

Module No.	Unit No.	Topics	Hrs.
1.		Introduction to Network Architectures, Protocol Layers, and Service models	10
	1.1	Network Hardware: Topologies, LAN, MAN, WAN, Wireless network, Home Network, Internetworks, Virtual LANs	
	1.2	Network Software: Protocol Hierarchies, Design Issues for the layers, Connection oriented and connectionless Services	
	1.3	Reference Models: Layers details of OSI, TCP/IP Models, Protocol Layers and Their Service Models	
2		Physical-layer Services and Systems	08
	2.1	Introduction to physical media, Coax, fiber, twisted pair, DSL, HFC	
	2.2	Data link layer services and protocols: Link-layer and its services, Ethernet, hubs, bridges, and switches, Link- layer addressing, Error-detection and error-correction. Parity, check-summing, CRC, Manchester encoding. Aloha protocols, Control Access Protocol, Carrier Sense	
	2.3	Multiple Access (CSMA), Local Area Networks - Ethernet, Token ring, FDDI. WiMax, cellular, satellite, and telephone networks, Bit transmission, Frequency division multiplexing. Time division multiplexing	
3		Data Link Layer Protocol	10
	3.1	PPP, HDLC, Stop and wait protocol	
4		Network Layer Services and Protocols	10
	4.1	Switching fabric, Routing and forwarding, Queues and buffering, Virtual-circuit and datagram networks, Internet protocol	
	4.2	IPv4 and IPv6, Tunneling, LS and DV algorithms. Routing in the Internet, RIP, OSPF, and BGP	
	4.3	Broadcast and multicast, Handling mobility	
5		Reliable and Unreliable Transport-layer Protocols	08
	5.1	GBN and SR. TCP and UDP. Port numbers, Multiplexing and de-multiplexing	
	5.2	Flow control and congestion control. Fairness, Delay, jitter, and loss in packet-switched networks	
	5.3	Bandwidth, throughput, and quality-of-service	
6		Principles of Network Applications.	06
	6.1	Application layer protocols such as HTTP, FTP, and SMTP,	
	6.2	Peer-to-Peer File Sharing Protocols and Architectures, ISPs and Domain name systems, Socket API and network socket programming

		Test 1	Test 2	Ave. Of Test 1 and Test 2						
EXC7051	Digital Image Processing	20	20	20	80	-	-	-	100	

Course Pre-requisite:

- EXS 401 : Applied Mathematics IV
- EXC 504 : Signal and Systems

Course Objectives:

1. To develop an overview of the field of image processing
2. To learn the fundamental concepts of Digital Image Processing .
3. To understand basic image enhancement and segmentation techniques.
4. To illustrate Image Transform calculations mathematically and develop fast transform algorithm
5. To learn Image Compression and Decompression Techniques

Course Outcomes:

After successful completion of the course student will be able to

1. Understand the concept of Digital Image processing.
2. Explain image enhancement and Segmentation technique.
3. Understand Digital Image compression and decompression techniques
4. Perform Binary Image Processing Operations

Module No.	Unit No.	Topics	Hrs.
1		Digital Image Processing Fundamentals	06
	1.1	Introduction: Background, Digital Image Representation, Fundamental Steps in Image Processing, Elements of a Digital Image Processing System	
	1.2	Digital Image Fundamentals: Elements of Visual Perception, A Simple Image Model, Sampling and Quantization, Some Basic Relationships between Pixels, Imaging Geometry. Image File Formats : BMP, TIFF and JPEG. Colour Models (RGB, HSI, YUV)	
2		Image Enhancement	08
	2.1	Spatial Domain Methods, Frequency Domain Methods, Some Simple Intensity Transformations, Histogram Processing, Image Subtraction, Image Averaging, Background	
	2.2	Smoothing Filters, Sharpening Filters, Lowpass Filtering, Highpass Filtering, Generation of Spatial Masks from Frequency Domain Specifications. Homomorphic Filtering.	
3		Image Segmentation and Representation	08
	3.1	Detection of Discontinuities, Edge Linking using Hough Transform, Thresholding, Region based Segmentation, Split and Merge Technique,	
	3.2	Image Representation and Description, Chain Code, Polygonal, Representation, Shape Number, Moments.	
4		Binary Image Processing	06
	4.1	Binary Morphological Operators, Hit-or-Miss Transformation, Boundary Extraction, Region Filling, Thinning and Thickening, Connected Component Labeling, Iterative Algorithm and Classical Algorithm	
5		Image Transform	12
	5.1	Introduction to the Fourier Transform, The Discrete Fourier Transform, Some Properties of the Two-Dimensional Fourier Transform Fast Fourier Transform(FFT),	
	5.2	Discrete Hadamard Transform(DHT), Fast Hadamard Transform(FHT), Discrete Cosine Transform(DCT), Discrete Wavelet Transform(DWT),	
6		Image Compression:	12
		Fundamentals – Coding Redundancy, Interpixel Redundancy, Psychovisual Redundancy, Fidelity Criteria.	
	6.1	Image Compression Models – The Source Encoder and Decoder, Lossless Compression Techniques : Run Length Coding, Arithmetic Coding, Huffman Coding, Differential PCM,	
	6.2	Lossy Compression Techniques: Improved Gray Scale Quantization, Vector Quantization, JPEG, MPEG-1.

EXC7052	Artificial Intelligence	20	20	20	80	-	-	-	100	

Course Prerequisite:

- Knowledge of linear algebra, multivariate calculus, and probability theory
- Knowledge of a programming language (MATLAB /C/C ++ recommended)

Course Objective:

1. To study basics of biological Neural Network.
2. To understand the different types of Artificial Neural Networks
3. To know the applications of ANN
4. To study fuzzy logic and fuzzy systems

Course Outcome: At the end of completing the course of Artificial Neural Networks, a student will be able to:

1. Choose between different types of neural networks
2. Design a neural network for a particular application
3. Understand the applications of neural networks
4. Appreciate the need for fuzzy logic and control

Module No.	Unit No.	Topics	Hrs.
1.		Fundamental Concepts of Neural Networks	8
	1.1	Difference between fuzzy and crisp sets and applications of fuzzy logic and	
	1.2	Biological neurons, McCulloch and Pitts models of neuron, Important Terms of ANNs, McCulloch-Pitts Neuron, Hebb Network, Supervised learning,	
	1.3	Applications and scope of Neural Network	
2		Supervised Learning Networks	12
	2.1	Perception Networks: Adaline, Madaline	
	2.2	Back Propagation Network	
	2.3	Function Network	
3		Unsupervised learning network	12
	3.1	Max Net, Mexican Hat, Kohonen Self-organizing Feature	
	3.2	Maps, Learning Vector Quantization, Adaptive Resonance Theory	
4		Associative networks	10
	4.1	Pattern Association, Auto-associative Memory Network, Hetero-associative Memory Network, Bidirectional Associative Memory, Discrete Hopfield Networks	
	4.2	Special networks: Simulated annealing neural networks, Boltzmann machine, Brain-in-a-Box	
5		Fuzzy logic	10
	5.1	Fuzzy sets, Properties, Operations on fuzzy sets, Fuzzy relation Operations on fuzzy relations,	
	5.2	The extension principle, Fuzzy mean Membership functions, Fuzzification and defuzzification methods	
	5.3	Fuzzy controllers, Adaptive neuro-fuzzy information systems (ANFIS)

Course Pre-requisite:

- EXL304: Object Oriented Programming Methodology Laboratory
- EXC303: Digital Circuits and Design

Course Objectives:

1. To teach ASIC Verification fundamentals
2. To highlight the significance of verification in VLSI industry

Course Outcomes:

After successful completion of the course student will be able to

1. demonstrate an understanding of programmable devices and languages
2. demonstrate an understanding of verification process in VLSI systems
3. write system verilog code for VLSI systems
4. carry out verification of design successfully using simulators

Module No.	Unit No.	Topics	Hrs.
1		Programmable Devices and Verilog	08
	1.1	Programmable Devices: Architecture of FPGA, CPLD with an example of Virtex-7 and Spartan -6 family devices	
	1.2	Verilog HDL: Data types, expressions, assignments, behavioral, gate and switch level modeling, tasks and functions	
	1.3	Verification Basics: Technology challenges, Verification methodology options, Verification methodology, Testbench creation, testbench migration, Verification languages, Verification IP reuse, Verification approaches, Verification and device test, Verification plans, reference design of Bluetooth SoC, Verification Guidelines	
2		Data types, procedural statements and testbench	08
	2.1	Data Types: Built in, Fixed size array, dynamic array, queues, associative array, linked list, array methods, choosing a storage type, creating new types with typedef, creating user-defined structures, type conversion, enumerated types, constants, strings, expression width	
	2.2	Procedural Statements and Routines: Procedural statements, tasks, functions and void functions, task and function overview, routine arguments, returning from a routine, local data storage, time values	
	2.3	Connecting the Testbench and Design: Separating the testbench and design, the interface construct, stimulus timing, interface driving and sampling, connecting it all together, top-level scope, program-module interactions, system verilog assertions, the four port ATM router, the ref port direction, the end of simulation, directed test for the LC3 fetch block	
3		OOP and Randomization	10
	3.1	Basic OOP: Class, Creating new objects, Object deallocation, using objects, variables, class methods, defining methods outside class, scoping rules, using one class inside another, understanding dynamic objects, copying objects, public vs. local, building a testbench	
	3.2	Randomization: Randomization in system Verilog, constraint details, solution probabilities, controlling multiple constraint blocks, valid constraints, In-line constraints, The pre-randomize and post-randomize functions, Random number functions, Constraints tips and techniques, common randomization problems, Iterative and array constraints, Atomic stimulus generation vs. scenario generation, random control, random number generators, random device configuration	
4		IPC and advanced OOP	08
	4.1	Threads and Interprocess Communication: working with threads, disabling threads, interprocess communication, events, semaphores, mailboxes, building a testbench with threads and IPC	
	4.2	Advanced OOP and Testbench Guidelines: Inheritance, Blueprint pattern, downcasting and virtual methods, composition, inheritance and alternatives, copying an object, abstract classes and pure virtual methods, callbacks, parameterized classes	
5		Assertions and Functional Coverage	12
	5.1	System Verilog Assertions: Assertions in verification methodology, Understanding sequences and properties, SystemVerilog Assertions in the Design Process, Formal Verification Using Assertions and SystemVerilog Assertions Guidelines	
	5.2	Functional Coverage: Coverage types, strategies, examples, anatomy of a cover group, triggering a cover group, data sampling, cross coverage, generic cover groups, coverage options, analyzing coverage data, measuring coverage statistics during simulation	
6		Advanced interfaces and interfacing with C	6
	6.1	Advanced Interfaces: Virtual interfaces with the ATM router, Connecting to multiple design configurations, procedural code in an interface	
	6.2	A complete System Verilog Testbench: Design blocks, testbench blocks, alternate tests	
	6.3	Interfacing with C: Passing simple values, connecting to a simple C routine, connecting to C++, simple array sharing, open arrays, sharing composite types, pure and context imported methods, communicating from C to system verilog, connecting other languages	
Total			52

Pre requisites:

- EXC503: Electromagnetic Engineering
- EXC405: Fundamentals of Communication Engineering
- EXC505: Digital Communication.

Course Objective: To teach students

1. Optical fiber wave guide structures, fabrication and signal degradation in fiber
2. The characteristics and working of various components used in optical link
3. Design and management of optical networks

Course Outcome: After successful completion of the course student will be able to

1. understand light wave propagation through fiber
2. identify structures, materials, and components used in optical link
3. analyze transmission characteristics of fiber
4. design and management of optical fiber links

Module No.	Unit No.	Topics	Hrs.
1.		Overview of Optical Fiber Communication	10
	1.1	The evolution of fiber optic systems, elements of an optical fiber transmission link, block diagram, advantages of optical fiber communication, applications	
	1.2	Ray theory transmission, total internal reflection, acceptance angle, numerical aperture and skew rays	
	1.3	Modes, electromagnetic mode theory and propagation, single mode and multimode fibers, linearly polarized modes	
	1.4	Fiber material, fiber cables and fiber fabrication, fiber joints, fiber connectors, splicer	
2		Optical Sources and Detectors	10
	2.1	Coherent and non-coherent sources, quantum efficiency, modulation capability of optical sources	
	2.2	LEDs: Working principle and characteristics	
	2.3	Laser diodes: Working principle and characteristics	
	2.4	Working principle and characteristics of detectors: PIN and APD, noise analysis in detectors, coherent and non-coherent detection, receiver structure, bit error rate of optical receivers, and receiver performance	
3		Components of Optical Fiber Networks	08
	3.1	Overview of fiber optic networks, trans-receiver, semiconductor optical amplifiers	
	3.2	Couplers/splicer, wavelength division multiplexers and de-multiplexers	
	3.3	Filters, isolators and optical switches	
4		Transmission Characteristic of Optical Fiber	08
	4.1	Attenuation, absorption, linear and nonlinear scattering losses, bending losses, modal dispersion, waveguide dispersion and pulse broadening,	
	4.2	Dispersion shifted and dispersion flattened fibers, and non linear effects	
	4.3	Measurement of optical parameters, attenuation and dispersion, OTDR	
5		Optical Networks	08
	5.1	SONET and SDH standards, architecture of optical transport networks (OTNs), network topologies	
	5.2	Operational principle of WDM, WDM network elements and Architectures, Introduction to DWDM, Solitons.	
6		Network Design and Management	08
	6.1	Point to point links system considerations, link power budget, and rise time budget	
	6.2	Transmission system model, power penalty-transmitter, receiver optical amplifiers, crosstalk, dispersion, wavelength stabilization.	
	6.3	Network management functions, configuration management, performance management, fault management, optical safety and service interface

EXC706	Project - I)	--	02	--	--	01	--	01

Course Code	Course Name	Examination Scheme								
		Theory Marks					Term Work	Practical	Oral	Total
		Internal assessment			End Sem. Exam					
		Test 1	Test 2	Ave. Of Test 1 and Test 2						
EXc706	Project -I	--	--	--	--	25	-	25	50	

Term Work:

The final year students have already under gone project assignment in their pre-final year in Mini Project I and II. In final year group of maximum **four** students will be completing a comprehensive project work based on the courses studied. The project work may be internally assigned or may be externally assigned by the research institutes, industry etc. Each group will be assigned one faculty as a supervisor. This project work in final year may be extension of the Mini Project work done in pre-final year.

The main intention of Project work is to enable students to apply the knowledge and skills learned out of courses studied to solve/implement predefined practical problem. The Project work may be beyond the scope of curriculum of courses taken or may be based on the courses but thrust should be

- Learning additional skills
- Development of ability to define, design, analysis and implementation of the problem and lead to its accomplishment with proper planning
- Learn the behavioral science by working in a group
- The project area may be selected in which the student intend to do further education and/or may be either intend to have employment or self employment
- The topic of project should be different and / or may be advancement in the same topic of Mini Project
- The students may use this opportunity to learn different computational techniques as well as some model development. This they can achieve by making proper selection of Project work.

The college should keep proper assessment record of the progress of project and at the end of the semester it should be assessed for awarding TW marks. The TW should be examined by approved internal faculty appointed by the head of the institute on the basis of following:

- Scope and objective of the project work.
- Extensive Literature survey.
- Progress of the work (Continuous assessment)
- Report in prescribed University format.

An approved external examiner and internal examiner appointed by the head of the institute together will assess during oral examination. The oral examination is a presentation by the group members on the project along with demonstration of the work done. In the examination each individual student should be assessed for his/her contribution, understanding and knowledge gained.

EXC801	CMOS VLSI Design	20	20	20	80	--	--	--	100	

Course Pre-requisite:

- EXC302: Electronic Devices
- EXC303: Digital Circuits and Design
- EXC402: Discrete Electronic Circuits
- EXC502: Design With Linear Integrated Circuits
- EXC601: VLSI Design
- EXC702: IC Technology

Course Objectives:

1. To teach analysis and design of building blocks of CMOS Analog VLSI Circuits.
2. To highlight the issues associated with the CMOS analog VLSI circuit design.

Course Outcomes:

After successful completion of the course student will be able to

1. discuss tradeoffs involved in analog VLSI Circuits.
2. analyze building blocks of CMOS analog VLSI circuits.
3. design building blocks of CMOS analog VLSI circuits
4. carry out verifications of issues involved in analog circuits via simulations

Module	Unit	Topics	Hrs.
--------	------	--------	------

No.	No.		
1.0		CMOS analog building blocks	8
	1.1	MOS Models: Necessity of CMOS analog design, Review of characteristics of MOS device, MOS small signal model, MOS spice models	
	1.2	Passive and Active Current Mirrors: Basic current mirrors, Cascode current mirrors and Active current mirrors	
	1.3	Band Gap References: General Considerations, Supply-independent biasing, Temperature independent references, PTAT current generation and Constant Gm biasing	
2.0		Single Stage Amplifiers	10
	2.1	Configurations: Basic concepts, Common source stage, Source follower, Common gate stage, Cascode stage	
	2.2	Frequency Response and Noise: General considerations, Common-source stage, Source followers, Common-gate stage, Cascode stage and Noise in single stage amplifiers	
3.0		Differential Amplifiers	10
	3.1	Configurations: Single ended and differential operation, Basic differential pair, Common-mode response, Differential pair with MOS loads, Gilbert cell	
	3.2	Frequency response and noise in differential pair	
4.0		MOS Operational Amplifiers	10
	4.1	Op-amp Design: General Considerations, performance parameters, One-stage op-amps, Two-stage op-amps, Gain Boosting, Common-mode feedback, Input range limitations, Slew Rate, Power supply rejection, Noise in op-amps	
	4.2	Stability and Frequency Compensation: General Considerations, Multipole systems, Phase margin, Frequency compensation, compensation of two stage op-amps	
5.0		Mixed Signal Circuits	10
	5.1	Switch Capacitor Circuits: MOSFETs as switches, Speed considerations, Precision Considerations, Charge injection cancellation, Unity gain buffer, Non-inverting amplifier and integrator	
	5.2	Oscillators: General considerations, Ring oscillators, LC oscillators, VCO	
	5.3	Phase-Locked Loop: Simple PLL, Charge pump PLL, Nonideal effects in PLL, Delay locked loops and applications of PLL in integrated circuits	
6.0		Analog Layout and other concepts	04
	6.1	Analog Layout Techniques: Antenna effect, Resistor matching, capacitor matching, current mirror matching, floorplanning, shielding and guard rings	
	6.2	AMS design flow, ASIC, Full custom design, Semi custom design, System on Chip, System in package, Hardware software co-design	
		Total	52

4. Gray, Meyer, Lewis, Hurst, “*Analysis and design of Analog Integrated Circuits*”, Willey, 5th Edition

Internal Assessment (IA):

Two tests must be conducted which should cover at least 80% of syllabus. The average marks of both the test will be considered as final IA marks

End Semester Examination:

1. Question paper will comprise of 6 questions, each of 20 marks.
2. Total 4 questions need to be solved.
3. Question No.1 will be compulsory and based on entire syllabus wherein sub questions of 2 to 5 marks will be asked.
4. Remaining questions will be selected from all the modules

EXC 802	Advanced Networking Technologies	20	20	20	80	-	-	-	100	

Course Pre-requisite:

- EXE704: Computer Communication Networks

Course Objectives:

1. To make students familiar with data communication technologies and how to use them to: Design, Implement, Operate, Manage enterprise networks.
2. To introduce the concept of wireless WAN,WAP and different IEEE standards.

Course Outcomes:

Upon completion of the course, students should be able to:

1. Analyze the performance of networks.
2. Determine the network performance using monitor tools..
3. Set up WLAN,PAN
- 4.Explain optical networking technology

Module	Unit	Topics	Hrs.
--------	------	--------	------

No.	No.		
1		Emerging Wireless Technologies	10
	1.1	Wireless Personal Area Network – Bluetooth Bluetooth (IEEE 802.15.1),Definitions of the Terms Used in Bluetooth, Bluetooth Protocol Stack, Bluetooth Link Types, Bluetooth Security, Network Connection Establishment in Bluetooth, Network Topology in Bluetooth, Bluetooth Usage Models	
	1.2	Bluetooth Applications, WAP and Bluetooth Wireless Personal Area Networks (WPAN):Low Rate (LR) and High Rate (HR)Wireless Sensor Network, Usage of Wireless Sensor Networks, Wireless Sensor Network	
	1.3	Model, Sensor Network Protocol Stack, ZigBee Technology, IEEE 802.15.4 LR-WPAN Device Architecture, IEEE 802.15.3a Ultra WideBand, Radio Frequency Identification.	
2		Optical Networking	06
	2.1	ONET/SDH Standards, devices, DWDM, frame format, DWDM, Performance and design considerations.	
3		WAN Technologies	12
	3.1	Frame: FR concept, FR specifications, FR design and VoFR and Performance and design considerations	
	3.2	ATM: The WAN Protocol: Faces of ATM, ATM Protocol operations. (ATM cell and Transmission) ATM Networking basics, Theory of Operations, B-ISDN reference model, PHY layer, ATM Layer (Protocol model), ATM layer and cell	
	3.3	Traffic Descriptor and parameters, Traffic Congestion control defined, AAL Protocol model, Traffic contract and QoS, User Plane overview, Control Plane AAL, Management Plane, Sub S3 ATM,ATM public services	
4		Network Design	08
	4.1	Network layer design, access layer design, access network capacity, network topology and Hardware and completing the access network design.	
5		Network Security	08
	5.1	Security threats, safeguards and design for network security	
	5.2	Enterprise Network Security: DMZ, NAT, SNAT, DNAT, Port Forwarding, Proxy, Transparent Proxy, Packet Filtering and Layer 7 Filtering	
6		Network Management and Control	
	6.1	Network management definitions, functional areas (FCAPS), SNMP, RMON,	08
	6.2	Designing a network management solutions, Monitoring and control of network activity and network project management	
		Total	52

Recommended Books:

1. Data Network Design by Darren Spohn, 3e McGraw Hill publications

		Test 1	Test 2	Ave. Of Test 1 and Test 2						
EXC803	MEMS Technology	20	20	20	80	-	-	-	100	

Course Pre –requisite:

- EXC 404: Basic VLSI Design
- EXC 604: IC Technology

Course Objective:

- To provide a basic knowledge of MEMS processing steps and processing modules.
- To demonstrate the use of semiconductor based processing modules used in the fabrication of variety of sensors and actuators (e.g. pressure sensors, accelerometers, etc.) at the micro-scale.
- To provide an understanding of basic design and operation of MEMS sensors and transducers.

Course Outcome:

On Completion of this course Student will be able to

- Understand the underlying fundamental principles of MEMS devices including physical operation, mathematical modeling and fabrication.
- Design and simulate MEMS devices and system using standard simulation tools.
- Develop different concepts of micro system sensors and actuators for real-world applications.

Module No.	Unit No.	Topics	Hrs.
1.		Introduction to MEMS	04
	1.1	Introduction to MEMS & Real world Sensor/Actuator examples (DMD, Air-bag, pressure sensors). MEMS Sensors in Internet of Things (IoT), BioMedical Applications	
2		MEMS Materials and Their Properties	10
	2.1	Materials (eg. Si, SiO ₂ , SiN, Cr, Au, Ti, SU8, PMMA, Pt); Important properties: Young modulus, Poisson's ratio, density, piezoresistive coefficients, TCR, Thermal Conductivity, Material Structure. Understanding Selection of materials based on applications.	
3		MEMS Fab Processes – 1	11
	3.1	Understanding MEMS Processes & Process parameters for: Cleaning, Growth & Deposition, Ion Implantation & Diffusion, Annealing, Lithography. Understanding selection of Fab processes based on Applications	
4		MEMS Fab Processes – 2	10
	4.1	Understanding MEMS Processes & Process parameters for: Wet & Dry etching, Bulk & Surface Micromachining, Die, Wire & Wafer Bonding, Dicing, Packaging. Understanding selection of Fab processes based on Applications	
5		MEMS Devices	11
	5.1	Architecture, working and basic quantitative behaviour of Cantilevers, Microheaters, Accelerometers, Pressure Sensors, Micromirrors in DMD, Inkjet printer-head. Understanding steps involved in Fabricating above devices	
6		MEMS Device Characterization	06
	6.1	Piezoresistance, TCR, Stiffness, Adhesion, Vibration, Resonant frequency, & importance of these measurements in studying device behavior, MEMS Reliability

EXC8041	Robotics	20	20	20	80	--	--	--	100	

Course Pre-requisite:

- EXS 301 : Applied Mathematics III
- EXS 401 : Applied Mathematics IV
- EXC 404 : Principles of Control Systems

Course Objectives:

1. To prepare students with basics of robotics
2. To familiarize students with kinematics & dynamics of robots
3. To familiarize students with path & Trajectory planning of robots
4. To familiarize students with robot vision

Course Outcomes:

After successful completion of the course student will be able to

1. Describe kinematics and dynamics of stationary and mobile robots
2. Describe trajectory planning for robots
3. Implement trajectory generation and path planning various algorithms
4. Work in interdisciplinary projects

Module No.	Unit No.	Topics	Hrs.
1		Fundamentals of Robotics	03
	1.1	Robot Classification, Robot Components, Degrees of freedom, Joints, Coordinates, Coordinate frames, workspace, applications	
2		Forward & Inverse Kinematics of Robots	09
	2.1	Homogeneous transformation matrices, Inverse transformation matrices, Forward and inverse kinematic equations – position and orientation	
	2.2	Denavit-Hatenberg representation of forward kinematics, Inverse kinematic solutions, Case studies	
3		Velocity Kinematics & Dynamics	14
	3.1	Differential motions and velocities : Differential relationship, Jacobian, Differential motion of a frame and robot, Inverse Jacobian, Singularities.	
	3.2	Dynamic Analysis of Forces : Lagrangian mechanics, Newton Euler formulation, Dynamic equations of robots, Transformation of forces and moment between coordinate frames	
4		Robot Motion Planning	04
	4.1	Concept of motion planning, Bug Algorithms – Bug1, Bug2, Tangent Bug	
5		Potential Functions and Visibility Graphs	08
	5.1	Attractive/Repulsive potential, Gradient descent, wave-front planner, navigation potential functions, Visibility map, Generalized Voronoi diagrams and graphs, Silhouette methods	
6		Trajectory planning	08
	6.1	Trajectory planning , Joint-space trajectory planning, Cartesian-space trajectories	
7		Robot Vision	06
	7.1	Image representation, Template matching, Polyhedral objects, Shape analysis, Segmentation, Iterative processing, Perspective transform.

Course Pre-requisite:

- EXC 704: Computer Communication Networks
- EXC: Digital Communication

Course Objectives:

To enable the student to study, understand and appreciate the concepts of mobile communication technology.

Course Outcomes:

After successful completion of the course student will be able to

1. Understand the fundamentals of mobile communications
2. Differentiate between GSM and CDMA
3. Understand the evolving wireless communication technologies.
4. Understand the requirement of 4 G technology

Module No.	Unit No.	Topics	Hrs.
1		Cellular Communication System	10
	1.1	Introduction to Cellular Communications, Frequency reuse, Multiple Access Technologies	
	1.2	Cellular Processes: Channel assignment, Call Setup, Handoff strategies, interferences and system capacity	
	1.3	Traffic Theory: Trunking and grade of service, improving system capacity	
2		GSM	8
	2.1	GSM Network architecture, signaling protocol architecture, identifiers, channels, Frame structure, speech coding, authentication and security, call procedure, handoff procedure, services and features	
3		CDMA digital cellular standard (IS-95).	8
	3.1	Frequency and channel specifications of IS-95, forward and reverse CDMA channel, packet and frame formats, mobility and radio resource management	
4		3 G Mobile Communication System	10
	4.1	2.5 G TDMA Evolution Path, GPRS, EDGE , 2.5G CDMA one cellular N/W, Need of 3G Cellular N/w, IMT 2000 Global Standard, UMTS Technology, W-CDMA Air interface, TD-SCDMA Technology, CDMA 2000 Cellular Technology	
5		4G Wireless Standards	8
	5.1	Need for 4G network, difference between 3G and 4G, LTE, WiMAX	
6		Emerging Technologies	8
	6.1	Mobile Adhoc Network, Mobile IP and Mobility Management, Mobile TCP, Wireless Sensor Networks, RFID Technology

Course Prerequisites:

- EXC404: Principles of Control System
- EXC504: Signals and Systems

Course Objective:

1. To study the importance of digital control
2. To study stability analysis of digital control systems
3. To study the design of digital control systems

Course Outcomes:

1. Students will be able to differentiate between analog and digital control and importance of digital control
2. Student will be able to analyze the digital control systems
3. Students will be able to design digital controllers

Module No.	Unit No.	Topics	Hrs.
1.0		Introduction	12
	1.1	Why digital control system? Advantages and limitations, comparison of continuous and discrete data control, block diagram of digital control system	
	1.2	Data conversion and quantization, sampling and reconstruction of analog signal, zero and first order hold	
	1.3	Impulse invariance, bilinear transformation, finite difference approximation of derivatives	
2.0		Modeling of Digital Control System	04
	2.1	Linear difference equation, pulse transfer function, input output model	
	2.2	Examples of first order continuous and discrete time systems	
	2.3	Signal flow graph applied to digital control system	
3.0		Time Domain Analysis and Stability of Digital Control System	08
	3.1	Mapping between s plane and Z plane, Jury's method, R. H. criteria	
	3.2	Comparison of time response of continuous and digital control system	
	3.3	Steady state analysis of digital control system, effect of sampling on transient response	
4.0		State Space Analysis	08
	4.1	Discrete time state equation in standard canonical form, similarity transformation	
	4.2	State transition matrix, solution of discrete time state equation	
	4.3	Discretization of continuous state space model and its solution.	
5.0		Pole Placement and Observer Design	10
	5.1	Concept of reachability, controllability, constructability and observability	
	5.2	Design of controller using pole placement method, dead beat controller design	
	5.3	Concept of duality, state observer design, concept of multi rate output feedback based state estimation	
6.0		Transfer Function Approach to Controller Design	10
	6.1	Control structures, internal stability,	
	6.2	Internal model principle and system type, well behaved signals	
	6.3	Discretization of PID controllers, pole placement controllers with performance specifications

Course Pre-requisites:

- EXC305:Electronic Instruments and Measurements
- FEC102,202: Applied Physics I and II

Course Objective:

1. To make students understand the Identification, classification, and working principle of various Biomedical Instruments used for Bio-potential measurement
2. Application of these instruments in diagnosis, therapeutic treatment and imaging fields

Course Outcome:

The Students will be able to

1. Identify various Bio-potential and their specifications in terms of amplitude and frequency.
2. Understand principle and working of various Biomedical Instruments for diagnosis applications.
3. Decide the applications of therapeutic instruments for treatment purpose.
4. Understand applications of imaging instruments and the modalities involved in each technique.

Module No.	Unit No.	Topics	Hrs.
1		Bio-Potential and Measurement	08
	1.1	Structure of Cell, Origin of Bio-potential, electrical activity of cell their characteristic and specifications.	
	1.2	Measurement of RMP and AP. Electrode-Electrolyte interface and types of bio-potential electrodes.	
2		Physiological Systems and Related Measurement	14
	2.1	Respiratory system- Physiology of respiration and measurements of respiratory related parameters	
	2.2	Cardiovascular system- Structure of Heart, Electrical and Mechanical activity of Heart, ECG measurements and Cardiac arrhythmias	
	2.3	Nervous system- Nerve cell, neuronal communication, nerve-muscle physiology, CNS, PNS. Generation of EEG and its measurement. Normal and abnormal EEG, evoked potential and epilepsy	
	2.4	Muscular system- Generation of EMG signal, specification and measurement.	
	Design of ECG amplifier		
3		Cardiovascular Measurement	08
	3.1	Blood Pressure- Direct and Indirect types. Blood Flow- Electromagnetic and Ultrasonic types. Blood Volume- Types of Plethysmography. (Impedance, Capacitive and Photoelectric) Cardiac Output- Flicks method, Dye-dilution and Thermo-dilution type. Heart sound measurement	
4		Life support Instruments	08
	4.1	Pacemaker- Types of Pacemaker, mode of pacing and its application. Defibrillator- AC and DC Defibrillators and their application. Heart Lung machine and its application during surgery. Haemodialysis system and the precautions to be taken during dialysis. Baby Incubator and its application	
5		Imaging Techniques	10
	5.1	X-Ray- Generation, X-ray tube and its control, X-ray machine and its application	
	5.2	CT Scan- CT Number, Block Diagram, scanning system and application. Ultrasound Imaging- Modes of scanning and their application	
	5.3	MRI- Concepts and image generation, block diagram and its application	
6		Significance of Electrical Safety	04
	6.1	Physiological effects of electrical current, Shock Hazards from electrical equipments and methods of accident prevention.

EXC806	Project - II	--	--	--	--	50	-	50	100	

Term Work:

The final year students have already under gone project assignment in their seventh semester and in this semester the students are expected to continue the project work of stage I.

The college should keep proper assessment record of the progress of project and at the end of the semester it should be assessed for awarding TW marks. The TW should be examined by approved internal faculty appointed by the head of the institute on the basis of following:

- Scope and objective of the project work.
- Extensive Literature survey.
- Progress of the work (Continuous assessment)
- Design, implementation, and analysis of the project work.
- Results, conclusions and future scope.
- Report in prescribed University format.

An approved external examiner and internal examiner appointed by the head of the institute together will assess during oral examination. The oral examination is a presentation by the group members on the project along with demonstration of the work done. In the examination each individual student should be assessed for his/her contribution, understanding and knowledge gained.
