Time: 3 hours **Marks: 80**

Instructions:

- Question No: 1 is compulsory.
- Answer any three from the remaining five questions.
- Figures to the right indicate full marks.
- Answers to questions should be grouped and written together.

Q1	**a)**	State the main factors which decide the choice of electrical drive	**20**
	b)	Illustrate dynamic braking and plugging in a DC series motor	
	c)	Prove that the energy loss during stopping by plugging is $\frac{3}{2}J\omega_{ms}^2$	
	d)	How to select a motor for continuous duty?	
Q2	**a)**	Explain in details the components of load torque.	**10**
	b)	A weight of 500 kg is being lifted up at a uniform speed of 1.5 m/s by a winch driven by a motor running at a speed of 1000 rpm. The moment of inertia of motor and winch are 0.5 and 0.3 kg-m^2 respectively. Calculate the motor torque and equivalent moment of inertia referred to the motor shaft. In the absence of weight, motor develops a torque of 100 N-m when running at 1000 rpm.	**10**
Q3	**a)**	Explain the operation of closed loop speed control scheme with inner current control loop. What are the various functions of inner current control loop	**10**
	b)	What do you understand by steady state stability? What is the main assumption? Derive the inequality constraints for steady state stability condition.	**10**
Q4	**a)**	Define intermittent periodic duty and short time duty. Derive over loading factor in both cases.	**10**
	b)	How a chopper fed DC separately excited DC motor operate in motoring and regenerative braking mode. Develop $\omega\ vs\ T$ relation and draw speed torque characteristics	**10**
Q5	**a)**	Describe the operation dynamic braking of an induction motor	**06**
	b)	Illustrate with neat circuit diagram the static rotor resistance control. Also show that the effective rotor resistance increased by $0.5R(1-\delta)$	**08**
	c)	What are the reasons for using load equalization in an electrical drive?	**06**
Q6	**a)**	Describe the operation of stepper motor along with its driver circuit	**10**
	b)	What is the basic principle of Direct torque control method? Explain with block diagram.	**06**
	c)	Derive fundamental torque equation and mention the significance of dynamic torque	**04**
