Q. P. Code: 27286

(3 Hours)

(Marks: 80)

N.B.: (1) Answer any four questions out of the six questions.

(2) Figures to the right indicate full marks.

(3) Illustrate answers with neat sketches where ever required.

(4) Answers to the questions should be grouped and written together.

(5) Assume suitable data if required.

Consider the problem for Graphical Method (a) 1.

> Min. $Z = -X_1 + 2 X_2$ Subject to, $-X_1 + 3X_2 \le 10$ $X_1 + X_2 \le 6$ $X_1 - X_2 \leq 2$ $X_1 X_2 \ge 0$

Discuss the advantages and limitations of simulation (b)

10

10

10

Solve by Big M method 2. (a) Minimize z $20 X_1+10 X_2$

Subject to $X_1 + X_2 \le 40$

 $4 X_1 + 3 X_2 \ge 60$ $3 X_1 + X_2 \ge 30$ $X_1, X_2 \ge 0$

- The annual demand of a product made by a company is 10,000units to a 10 certain stockiest. The cost of placing an order is Rs.300. The item costs (b) Rs. 20 per piece and the inventory cost per unit is 20% of the item cost. The storage cost is given as Rs 25/unit/year. Compute:
 - Economic Order Quantity i. .
 - Total Cost of keeping the inventory
 - Maximum inventory that can be held.
- Solve the following problem by Dual simplex method (a)

10

 $Min.Z = X_1 + X_2$ $2X_1 + X_2 \ge 2$ $-X_1 - X_2 \geq 1$

Explain in detail the structure of queuing system describing each element 10 (b) of queue with suitable example.

Determine the optimum basic feasible solution to the following transportation problem. Find basic feasible solution by Vogel's Approximation Method and optimum solution by "uv" method.

150 B. B. B.	5	d and optimum solution by uv me

Q. P. Code: 27286

Solve the following Assignment problem for minimization (b)

4	1	1	n
		4	v

	I	II	III IV S V
1	11	17	8 3 3 16 3 20 20
2	9	7	12: 5 6 6 15
3	13	16	15 12 16
4	21	24	17 28 26
5	14	10	12 11 13

5. (a) Use two phase simplex method to solve following problem

Maximize $Z = 5 X_1 + 3 X_2$

Subject to the constraints $2X1 + X_2 \le 1$

$$X_1 + 4 \ X_2 \ge 6$$

 $X_1, X_2 \ge 0$

(b) Provide the optimum job sequencing involving three machines M₁, M₂ and M₃

(order M₁, M₂ M₃) for the following:

Job		J1	J2	J3	J4	J50 4
Time on	M ₁	7	12	11	93	8 30 0
Machines	M_2	8	9	5.00	6	7 30
	M_3	4155	13	9 6 8	10	14

- 6. (a)
- 1. Consider the LPP and solve by Simplex method

10

Maximize $Z = 4X_1 + 3X_2 + 6X_3$

Subject to

$$2X_1 + 3X_2 + 2X_3 \le 440$$

$$4X_1 + 32X_3 \le 470$$

$$2X_1 + 5X_2 \le 430$$

$$X_1, X_2, X_3 \ge 0$$

The profit for three markets as a function of sales effort expended, as given 10 in the table. How will you distribute a given number of salesmen, so as to

achieve maximum profit?

No. of salesmen	2000	Markets	
	I Solar	II	III
0	40	50	50
	£ × 42	60	60
2	50	65	70
3	60	75	80
6 6 6 6 6 6 6 6 6 6 6 6 6 6 6 6 6 6 6	66	85	88
5, 5, 5	75	95	105
6	82	110	115
1. 1. 1. 1. 1. 1. 1. 1. 1. 1. 1. 1. 1. 1	90	120	130
