i Question number 1 is compulsory
ii Attempt any three questions from Q2 to Q6
iii Assume suitable data wherever required
iv Figures to the right indicate full marks for that question

Marks

15

A What do you mean by resolving power of diffraction grating ? What is it's significance ?

B What is population inversion in Laser system? What is it's Significance?
C An optical fibre refractive index 1.48 and 1.41 respectively of core ,clad Calculate i) Critical angle ii) Numerical Aperture iii) Maximum Incidence angle

D Find the divergence of a Vector field $\vec{F}=4 \mathrm{x} \hat{\imath}+2 \mathrm{y} \hat{\jmath}+3 \mathrm{z} \hat{k}$
E Calculate the velocity of a particle at which it should move so that its mass will increase by $25 \%$ of its rest mass.

F What are nanomaterials \& what are their different types

A What is plane transmission Grating? Explain its spectral response
A plane transmission Grating has 5000 lines $/ \mathrm{cm}$.
i) Determine the Highest order of spectrum observed if incident light is having wavelength of $6010 \AA^{\circ} \mathrm{ii}$ ) If the opaque spaces between the slits are made three times the transparent space and the maximum order is three, Find which order of spectra will be absent .

B With neat and labelled diagrams explain the construction and working of a
Nd-Yag laser.

## Attempt all questions

## 15

A What are Galilean transformations? Obtain transformation equations for coordinate, velocity and acceleration.

B Explain the term 'curl of a vector and state its significance'. Show that the divergence of the curl of a vector is zero.

Attempt all three questions ( 5 marks each)
15
A What do you understand by resolving power? How can the resolving power of a grating be increased? Find maximum resolving power of a grating of width 3 cm , illuminated by a laser beam of wavelength $6000 \AA^{\circ}$ having 6000 lines per cm .

B What is the divergence of a vector field? Find the divergence of a field $\mathrm{F}=$ $x z \hat{i}+y^{2} z^{3} \hat{\jmath}-x y z k$ at a point (3, -1,2). Interpret the result you obtain.

C With a neat labelled diagram explaining the construction and working of an Scanning electron microscope. (SEM)

## Attempt all three questions (5 marks each)

A Obtain Ampere's circuital law for static magnetic field in differential and integral form

B What is time dilation? Express it mathematically. The length of a moving rod is found to be one fourth of its length when at rest. What is the speed of the rod relative to the observer?

C What is Holography? With neat diagram explain reconstruction process of a hologram.

Attempt three questions ( 5 marks each)

## Write short Notes on

A Application of fibre optics in communication
B Applications of Nano technology in various fields
C Applications of Lasers in industry
