UNIVERSITY OF MUMBAI

Bachelor of Engineering

Automobile Engineering

in

Final Year with effect from AY 2022-23

(REV- 2019 'C' Scheme) from Academic Year 2019-20

Under

FACULTY OF SCIENCE & TECHNOLOGY

(As per AICTE guidelines with effect from the academic year 2019–2020)

Syllabus for Approval

Sr. No.	Heading	Particulars
1	Title of the Course	Final Year B.E. in Automobile Engineering
2	Eligibility for Admission	After Passing Third Year Engineering as per the Ordinance 0.6243
3	Passing Marks	40%
4	Ordinances / Regulations (if any)	Ordinance 0.6243
5	No. of Years / Semesters	8 semesters
6	Level	Under Graduate
7	Pattern	Semester
8	Status	Revised
9	To be implemented from Academic Year	2022-2023

Date

Dr. S. K. Ukarande Associate Dean Faculty of Science and Technology University of Mumbai Dr Anuradha Muzumdar Dean Faculty of Science and Technology University of Mumbai

Preamble

To meet the challenge of ensuring excellence in engineering education, the issue of quality needs to be addressed, debated and taken forward in a systematic manner. Accreditation is the principal means of quality assurance in higher education. The major emphasis of accreditation process is to measure the outcomes of the program that is being accredited. In line with this Faculty of Science and Technology (in particular Engineering) of University of Mumbai has taken a lead in incorporating philosophy of outcome based education in the process of curriculum development.

Faculty resolved that course objectives and course outcomes are to be clearly defined for each course, so that all faculty members in affiliated institutes understand the depth and approach of course to be taught, which will enhance learner's learning process. Choice based Credit and grading system enables a much-required shift in focus from teacher-centric to learner-centric education since the workload estimated is based on the investment of time in learning and not in teaching. It also focuses on continuous evaluation which will enhance the quality of education. Credit assignment for courses is based on 15 weeks teaching learning process, however content of courses is to be taught in 12-13 weeks and remaining 2-3 weeks to be utilized for revision, guest lectures, coverage of content beyond syllabus etc.

There was a concern that the earlier revised curriculum more focused on providing information and knowledge across various domains of the said program, which led to heavily loading of students in terms of direct contact hours. In this regard, faculty of science and technology resolved that to minimize the burden of contact hours, total credits of entire program will be of 171, wherein focus is not only on providing knowledge but also on building skills, attitude and self learning. Therefore, in the present curriculum skill based laboratories and mini projects are made mandatory across all disciplines of engineering in second and third year of programs, which will definitely facilitate self learning of students. The overall credits and approach of curriculum proposed in the present revision is in line with AICTE model curriculum.

The present curriculum has been implemented for Second Year of Engineering from the academic year 2020-21. Subsequently this will be carried forward for Third Year and Final Year Engineering in the academic years 2021-22 and 2022-23 respectively.

Dr. S. K. Ukarande Associate Dean Faculty of Science and Technology University of Mumbai

Dr Anuradha Muzumdar Dean Faculty of Science and Technology University of Mumbai

Incorporation and implementation of Online Contents from NPTEL/ Swayam <u>Platform</u>

The curriculum revision is mainly focused on knowledge component, skill based activities and project based activities. Self learning opportunities are provided to learners. In the revision process this time in particular Revised syllabus of 'C' Scheme wherever possible additional resource links of platforms such as NPTEL, Swayam are appropriately provided. In an earlier revision of curriculum in the year 2012 and 2016 in Revised scheme 'A' and 'B' respectively, efforts were made to use online contents more appropriately as additional learning materials to enhance learning of students.

In the current revision based on the recommendation of AICTE model curriculum overall credits are reduced to 171, to provide opportunity of self learning to learner. Learners are now getting sufficient time for self learning either through online courses or additional projects for enhancing their knowledge and skill sets.

The Principals/ HoDs/ Faculty members of all the Institutes are required to motivate and encourage learners to use additional online resources available on platforms such as NPTEL/ Swayam. Learners can be advised to take up online courses, on successful completion they are required to submit certification for the same. This will definitely help learners to facilitate their enhanced learning based on their interest.

Dr. S. K. Ukarande Associate Dean Faculty of Science and Technology University of Mumbai

Dr Anuradha Muzumdar Dean Faculty of Science and Technology University of Mumbai

Preface

Engineering education in India, in general, is being revamped so as to impart the theoretical knowledge along with industrial exposure. It is our attempt, when we are introducing a new curriculum; to bridge the industry-academia gap. To enable this, we have introduced components such as skill-based laboratories and project-based learning. We trust that this will allow the learner to apply knowledge gained in previous and current semesters to solve problems for gaining better understanding. What once were pure mechanical systems have now been transformed into multidisciplinary systems of mechatronics, electronics and computer science. Interdisciplinary knowledge is gaining importance as we are moving towards automated world as technology advances. Keeping this in mind the curriculum has been designed in a way so that learner shall be acquainted with many Interdisciplinary subjects.

Automobile Engineering is one of the fastest growing sectors, with lots of inventions and innovations happening. The graduating Automobile Engineers can contribute in the areas such as engines, transmission, safety and stability, energy and alternate energy etc. The challenges for our budding engineers would be manifold, when electric vehicles are already gaining popularity and driverless cars becoming a reality.

Engineers develop new technological solutions. During the engineering design process, the responsibilities of the engineer may include defining problems, conducting and narrowing research, analyzing criteria, finding and analyzing solutions, and making decisions. The Program Educational Objectives proposed for the undergraduate program in Automobile Engineering are listed below;

- 1. To prepare the stake holder to exhibit leadership qualities with demonstrable attributes in lifelong learning to contribute to the societal needs.
- 2. To make ready the stake holder to pursue higher education for professional development
- 3. To help the stake holder to acquire the analytical and technical skills, knowledge, analytical ability attitude and behavior through the program
- 4. To prepare the stakeholders with a sound foundation in the mathematical, scientific and engineering fundamentals
- 5. To motivate the learner in the art of self-learning and to use modern tools for solving real life problems and also inculcate a professional and ethical attitude and good leadership qualities
- 6. To Prepare the stake holder to able to Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

We trust this revised version of syllabus come up to the expectations of all stakeholders. We wish to place on record our sincere thanks and appreciations to the various contributors from the academia and industry for their most learned inputs in framing this syllabus.

- 1. To study basic and advance Automotive Electronics systems.
- 2. To acquaint with working of different Automotive Electronics systems and subsystems.
- 3. To familiarize basic and advance electronics technologies like Battery, Modern Energy storage methods, 48-volt technology etc.

Course Outcomes: After completion of this course, Learner will be able to...

- 1. Illustrate working of different batteries and modern Energy storage methods used in automobiles.
- 2. Demonstrate working of Charging system used in automobiles.
- 3. Illustrate working of starting system and drives used in automobiles.
- 4. Draw and Interpret lighting and wiring systems in automobile.
- 5. Comprehend working of different Automotive & Communication Protocols and actuators used in automobiles.
- 6. Elaborate working of Automotive Diagnostics with its procedure and equipment used.

Course Code	Course Name	Credits
AEC702	Vehicle Dynamics	03

- 1. To familiarize with basic concepts of vehicle dynamics.
- 2. To analyze the vehicle in context of ride, handling and longitudinal dynamics of vehicle.
- 3. To get acquainted with simulation process using software in the domain of vehicle dynamics.

Course Outcomes: After completion of this course, Learner will be able to...

- 1. Analyze the vehicle directional stability.
- 2. Enumerate the suspension systems, tire dynamics & directional stability of the vehicle.
- 3. Develop physical and mathematical models to predict the dynamic response of vehicles
- 4. Demonstrate the ride characteristic of the vehicle.
- 5. Analyze the vehicle roll behaviour
- 6. Comprehend the various trends in Vehicle Dynamics.

Module	Content	Hrs.		
1	Introduction	4		
	History of Road and Off-Road Vehicle dynamics, Road Load, Aerodynamics-			
	Drag, Side force, Lift force, Rolling Resistance Total Road Loads, Introduction			
	about Longitudinal vehicle Dynamics			
2	Tyres	6		
	SAE Tyre axis system, Tyre forces, Moments, Lateral force V/S Slip Angle,			
	Aligning Torque V/S Slip Angle, Tyre Construction, Tractive Properties,			
	Cornering Properties, Camber Thrust, Aligning Moment, Combined braking and			
	Cornering, Conicity and Ply Steer, Tire Vibration, Tyre Properties affecting			
	Vehicle Roll over, Introduction to Magic Tyre Formula, Tyre testing on various			
2	road surfaces	0		
3	Suspension	8		
	Solid Axles, Independent suspensions, Variable Rate Leaf Spring., Anti Squat and Anti Pitch Suspension Geometry, Anti Dive Suspension Geometry,			
	Equalizing Suspension, Roll Centre Analysis, Motion Analysis of Wheel			
	Suspension, semi active and Active Suspensions			
4	Vertical Dynamics	10		
	Lumped mass, Equation of Simple Spring Mass System with to degrees of	10		
	freedom system, pitch and bounce motion frequencies, Conjugate Points, Elastic,			
\square	Dynamic, doubly Conjugate Points, Calculation of Conjugate Points			
	Sources for vehicle vibration, vibration isolation, Effects of damping the vibration,			
	vibration absorbers.			
5	Lateral Dynamics	6		
	Steering geometry, Front wheel geometry, Steering system forces and moments,			
	Steering system effects, Influence of front wheel drive, four wheel steering,			
	Suspension effect of cornering, High speed cornering, understeer, oversteer,			
	Jack Knifing of articulated vehicles			
6	Recent Trends in Vehicle dynamics	4		
	Vehicle dynamic Control (ESP and active steering), Actuators, Sensors for			
	Automobile Control, Sensors for Detecting Vehicle Environment, Central Tyre			
	Inflation system.			

Assessment:

Internal Assessment for 20 marks:

Consisting of Two Compulsory Class Tests

First test based on approximately 40% of content and second test based on remaining contents (approximately 40% but excluding contents covered in Test I)

End Semester Examination:

Weightage of each module in end semester examination will be proportional to number of respective lecture hours mentioned in the syllabus.

Question paper will comprise of total six questions, each carrying 20 marks

- 1. Question 1 will be compulsory and should cover maximum contents of the syllabus
- 2. **Remaining questions will be mixed in nature** (for example if Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3)
- 3. Only three out of the remaining questions to be solved.

Course Code	Course Name	Credits
AEDLO7032	Alternate Fuels and Emission Control	03

- 1. To broaden the knowledge of alternate fuels,
- 2. To understand the manufacturing and performance characteristics of alternate fuels
- 3. To broaden the understanding of performance of single and multi cylinder diesel and petrol engines
- 4. To introduce emission tests procedure

Course Outcomes: After completion of this course, Learner will be able to...

- 1. To Identify different alternate automotive fuels
- 2. Understand gaseous fuel technology in internal combustion applications.
- 3. Identify the advantage and disadvantages of Alternative Fuels
- 4. Understand various emission source in SI and CI Engine
- 5. Understand different emission control technique

1 Introduction	4
	4
Overview of Alternative Fuel, History of Fuel, Need for alternate	
availability and comparative properties of alternate fuels, classificat	ion of
alternative fuels.	
2 Gaseous Fuels - CNG, LPG, BIOGAS, LNG & HCNG: Availability, prop	
modifications required in SI engines, performance and emission character	eristics,
storage, handling & dispensing, safety aspects.	
Synthetic fuels:	
Di-Methyl Ether (DME), Diethyl Ether (DEE), and Gas to Liquid	
Availability, properties, modifications required in CI engines, performan emission characteristics, storage, handling and dispensing, safety aspects.	ce and
Hydrogen and Fuel cells - Production methods, properties, performan	ce and
emission characteristics, storage and handling, safety aspects, classifi	
description of fuel cell systems, fuel cell components, properties of fuel cell	
3 Liquid Fuels	7
Sustainable mobility, emission scenario & norms, emission sources & o	-
greenhouse gases & control, petroleum reserves & refining, fuel properties	
effects on performance & emission characteristics	
Bio fuels:	
Biodiesel, Ethanol and straight vegetable oils (SVO), Manufacturing pro-	cess of
alcohol, blending of methanol and ethanol, types of vegetable oils for	engine
application, their effects on performance & emission characteristics.	
4 Emissions From SI Engines	8
Emission formation in S.I. engines, hydrocarbons, carbon monoxide, nitric	
& lead, effects of design & operating variables on emission formation, cont	U
of emission formation in engines, thermal reactors, catalytic converters, cl	
canister control for evaporative emission, positive crank case ventilation sys	
5 Emissions From CI Engines	8
Diesel combustion, stages, direct & indirect combustion, emission form	
particulate matter & smoke, effect of operating variables on emission form PM & NOx trade-off,Exhaust Gas Recirculation (EGR), air injection,	
number effect, emission after-treatment devices like DOC, DPF, SCR &	
Adsorber.	

6	Emission Measurement And Test Procedure				
	Measurement & instrumentation for HC, CO, CO2, NOx & PM, smoke meters,				
	and calibration checks on emission equipment's, dilution tunnel technique for				
	particulate measurement, emission test procedures on engine & chassis				
	dynamometers, constant volume sampling procedure.				

6

Assessment:

Internal Assessment for 20 marks: Consisting Two Compulsory Class Tests First test based on approximately 40% of contents and second test based on remaining contents (approximately 40% but excluding contents covered in Test I). Duration of each test shall be one hour.

End Semester Examination: Weightage of each module in end semester examination will be proportional to number of respective lecture hours mentioned in the curriculum.

- 1. Question paper will comprise of total six questions, each carrying 20 marks
- 2. Question 1 will be compulsory and should cover maximum contents of the curriculum
- 3. Remaining questions will be mixed in nature (for example if Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3)

Course Code	Course Name	Credits
AEDLO 7042	Tire Technology	03

- 1. To understand Tire Materials and Tire Manufacturing processes in detail.
- 2. To study effect of effect of Tire on Grip and Rolling resistance
- 3. To understand Future tire technologies in Passenger and Commercial vehicles.

Course Outcomes: Upon successful completion of this course, the learner will be able to

- 1. Understand basics of Tire construction and factors influencing tire design
- 2. Explain tread design and tread wear mechanisms.
- 3. Describe the Tire casing construction
- 4. Understand use of Natural Rubber as Tire Material and Describe Tire Manufacturing Process
- 5. Interpret how Tire Grip works on Dry and Wet surfaces.
- 6. Understand the effect of Tire on Rolling resistance and Fuel savings.

Module	Content	Hrs.
1	Introduction to Tyres - The Global Tire Industry, Tire Technology, Tire Construction, Mission Profile and Design Envelopes, Dimensions and Nomenclature, Tire Speed and Load Rating, Trends in Tire Sizes, Secondary Factors Influencing Tire Design. ,Off-Road Tires , Farm Tires	06
2	Tire Tread Technology -Introduction, Tread Compounds, Radial Tire Tread Design Parameters, Tire Footprint Pressure, Tread Extrusion Contour, Tread Radius, Tread Wear Mechanisms	06
3	Tire Casing Construction -Introduction, Casing Components, Belt Design, Casing Construction, Inner Liner and Barrier, Ply ,Sidewall, Bead,Apex (Bead Filler), Chafer (Toe Guard), Shoulder Wedge, Model Compound Line-up.	06
4	Radial Tire Materials -Polymers used in tires, Natural Rubber and Grades(TSL-L,5,10,20,50), properties of natural rubber compounds, synthetic elastomers used in tires, Carbon black and its properties, Vulcanization systems, Pressing aids. Tire Manufacturing - Component Preparation, Electron beam radiation process, Tire building, Tire curing, Final Finish, Impact on Environment due to Tire Manufacturing.	06
5	Tire grip on Road Surface -How Road Surface affects Grips, Generation of grip forces in contact patch, Grip on wet surfaces, Grip and Vehicle Handling, Testing tire grip.	08
6	Rolling resistance and Fuel Saving -Tires Contribution to fuel efficiency, Fuel saving and reduction of exhaust emission, Viscoelastic material and energy dissipation, Measurement of Tire rolling resistance-As per standard ISO8767 and 9948 and Laboratory Measurement Future trends- In Passenger Car Tires and Commercial Vehicle Tires.	08

- 1. To familiarize the students with the need, benefits and components of PLM
- 2. To acquaint students with Product Data Management & PLM strategies
- 3. To give insights into new product development program and guidelines for designing and developing a product
- 4. To familiarize the students with Virtual Product Development

Course Outcomes: Learner will be able to...

- 1. Gain knowledge about phases of PLM, PLM strategies and methodology for PLM feasibility study and PDM implementation.
- 2. Illustrate various approaches and techniques for designing and developing products.
- 3. Apply product engineering guidelines / thumb rules in designing products for moulding, machining, sheet metal working etc.
- 4. Acquire knowledge in applying virtual product development tools for components, machining and manufacturing plant

-		
Module	Content	Hrs.
01	Introduction to Product Lifecycle Management (PLM): Product Lifecycle	10
	Management (PLM), Need for PLM, Product Lifecycle Phases, Opportunities of	
	Globalization, Pre-PLM Environment, PLM Paradigm, Importance & Benefits of	
	PLM, Widespread Impact of PLM, Focus and Application, A PLM Project,	
	Starting the PLM Initiative, PLM Applications	
	PLM Strategies: Industrial strategies, Strategy elements, its identification,	
	selection and implementation, Developing PLM Vision and PLM Strategy,	
	Change management for PLM	
02	Product Design: Product Design and Development Process, Engineering Design,	09
	Organization and Decomposition in Product Design, Typologies of Design	
	Process Models, Reference Model, Product Design in the Context of the Product	
	Development Process, Relation with the Development Process Planning Phase,	
	Relation with the Post design Planning Phase, Methodological Evolution in	
	Product Design, Concurrent Engineering, Characteristic Features of Concurrent	
	Engineering, Concurrent Engineering and Life Cycle Approach, New Product	
	Development (NPD) and Strategies, Product Configuration and Variant	
	Management, The Design for X System, Objective Properties and Design for X	
	Tools, Choice of Design for X Tools and Their Use in the Design Process	
03	Product Data Management (PDM): Product and Product Data, PDM systems	05
	and importance, Components of PDM, Reason for implementing a PDM system,	
	financial justification of PDM, barriers to PDM implementation	
04	Virtual Product Development Tools: For components, machines, and	05
	manufacturing plants, 3D CAD systems and realistic rendering techniques, Digital	
	mock-up, Model building, Model analysis, Modeling and simulations in Product	
	Design, Examples/Case studies	
05	Integration of Environmental Aspects in Product Design: Sustainable	05
	Development, Design for Environment, Need for Life Cycle Environmental	
	Strategies, Useful Life Extension Strategies, End-of-Life Strategies, Introduction	
	of Environmental Strategies into the Design Process, Life Cycle Environmental	
	Strategies and Considerations for Product Design	
06	Life Cycle Assessment and Life Cycle Cost Analysis: Properties, and	05
	Framework of Life Cycle Assessment, Phases of LCA in ISO Standards, Fields of	

Application and Limitations of Life Cycle Assessment, Cost Analysis and the Life Cycle Approach, General Framework for LCCA, Evolution of Models for Product	
Life Cycle Cost Analysis	

Assessment:

Internal Assessment for 20 marks:

Consisting Two Compulsory Class Tests

First test based on approximately 40% of contents and second test based on remaining contents (approximately 40% but excluding contents covered in Test I)

End Semester Examination:

Weightage of each module in end semester examination will be proportional to number of respective lecture hours mentioned in the curriculum.

- 1. Question paper will comprise of total six questions, each carrying 20 marks
- 2. Question 1 will be compulsory and should cover maximum contents of the curriculum
- **3. Remaining questions will be mixed in nature** (for example if Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3)
- 4. Only Four questions need to be solved.

Course Code	Course Name	Credits
ILO7012	Reliability Engineering	03

- 1. To familiarize the students with various aspects of probability theory
- 2. To acquaint the students with reliability and its concepts
- 3. To introduce the students to methods of estimating the system reliability of simple and complex systems
- 4. To understand the various aspects of Maintainability, Availability and FMEA procedure

Course Outcomes: Learner will be able to...

- 1. Understand and apply the concept of Probability to engineering problems
- 2. Apply various reliability concepts to calculate different reliability parameters
- 3. Estimate the system reliability of simple and complex systems
- 4. Carry out a Failure Mode Effect and Criticality Analysis

Module	Content	Hrs.
01	Probability Theory: Probability: Standard definitions and concepts; Conditional	08
01	Probability, Baye's Theorem.	00
	Probability Distributions: Central tendency and Dispersion; Binomial, Normal,	
	Poisson, Weibull, Exponential, relations between them and their significance.	
	Measures of Dispersion: Mean, Median, Mode, Range, Mean Deviation,	
	Standard Deviation, Variance, Skewness and Kurtosis.	
02	Reliability Concepts: Reliability definitions, Importance of Reliability, Quality	08
	Assurance and Reliability, Bath Tub Curve.	
	Failure Data Analysis: Hazard rate, failure density, Failure Rate, Mean Time To	
	Failure (MTTF), MTBF, Reliability Functions.	
	Reliability Hazard Models: Constant Failure Rate, Linearly increasing, Time	
	Dependent Failure Rate, Weibull Model. Distribution functions and reliability	
	analysis.	
03	System Reliability: System Configurations: Series, parallel, mixed configuration,	05
	k out of n structure, Complex systems.	
04	Reliability Improvement: Redundancy Techniques: Element redundancy, Unit	08
	redundancy, Standby redundancies. Markov analysis.	
	System Reliability Analysis – Enumeration method, Cut-set method, Success	
	Path method, Decomposition method.	
05	Maintainability and Availability: System downtime, Design for Maintainability:	05
	Maintenance requirements, Design methods: Fault Isolation and self-diagnostics,	
	Parts standardization and Interchangeability, Modularization and Accessibility,	
	Repair Vs Replacement.	
	Availability – qualitative aspects.	
06	Failure Mode, Effects and Criticality Analysis: Failure mode effects analysis,	05
	severity/criticality analysis, FMECA examples. Fault tree construction, basic	
	symbols, development of functional reliability block diagram, Fault tree analysis	
	and Event tree Analysis

Course Code	Course Name	Credits
ILO7013	Management Information System	03

- 1. The course is blend of Management and Technical field.
- 2. Discuss the roles played by information technology in today's business and define various technology architectures on which information systems are built
- 3. Define and analyze typical functional information systems and identify how they meet the needs of the firm to deliver efficiency and competitive advantage
- 4. Identify the basic steps in systems development

Course Outcomes: Learner will be able to...

- 1. Explain how information systems Transform Business
- 2. Identify the impact information systems have on an organization
- 3. Describe IT infrastructure and its components and its current trends
- 4. Understand the principal tools and technologies for accessing information from databases to improve business performance and decision making
- 5. Identify the types of systems used for enterprise-wide knowledge management and how they provide value for businesses

Module	Content	Hrs.	
01	Introduction To Information Systems (IS): Computer Based Information Systems,	4	
	Impact of IT on organizations, Importance of IS to Society. Organizational		
	Strategy, Competitive Advantages and IS		
02	Data and Knowledge Management: Database Approach, Big Data, Data	7	
	warehouse and Data Marts, Knowledge Management		
	Business intelligence (BI): Managers and Decision Making, BI for Data analysis		
	and Presenting Results		
03	Ethical issues and Privacy: Information Security. Threat to IS, and Security	7	
	Controls		
04	Social Computing (SC): Web 2.0 and 3.0, SC in business-shopping, Marketing,	7	
	Operational and Analytic CRM, E-business and E-commerce – B2B B2C. Mobile		
	commerce.		
05	Computer Networks Wired and Wireless technology, Pervasive computing, Cloud	6	
	computing model.		
06	Information System within Organization: Transaction Processing Systems,	8	
	Functional Area Information System, ERP and ERP support of Business Process.		
	Acquiring Information Systems and Applications: Various System development		
	life cycle models.		

Assessment:

Internal Assessment for 20 marks:

Course Code	Course Name	Credits
ILO7014	Design of Experiments	03

- 1. To understand the issues and principles of Design of Experiments (DOE)
- 2. To list the guidelines for designing experiments
- 3. To become familiar with methodologies that can be used in conjunction with experimental designs for robustness and optimization

Course Outcomes: Learner will be able to...

- 1. Plan data collection, to turn data into information and to make decisions that lead to appropriate action
- 2. Apply the methods taught to real life situations
- 3. Plan, analyze, and interpret the results of experiments

Module	Content	Hrs.
01	Introduction	06
	1.1 Strategy of Experimentation	
	1.2 Typical Applications of Experimental Design	
	1.3 Guidelines for Designing Experiments	
	1.4 Response Surface Methodology	
02	Fitting Regression Models	08
	2.1 Linear Regression Models	
	2.2 Estimation of the Parameters in Linear Regression Models	
	2.3 Hypothesis Testing in Multiple Regression	
	2.4 Confidence Intervals in Multiple Regression	
	2.5 Prediction of new response observation	
	2.6 Regression model diagnostics	
	2.7 Testing for lack of fit	
03	Two-Level Factorial Designs	07
	3.1 The 2 ² Design	
	3.2 The 2 ³ Design	
	3.3 The General ² Design	
	3.4 A Single Replicate of the 2 ^k Design	
	3.5 The Addition of Center Points to the 2 ^k Design,	
	3.6 Blocking in the 2 th Factorial Design	
04	3.7 Split-Plot Designs	07
04	Two-Level Fractional Factorial Designs	07
	4.1 The One-Half Fraction of the 2 ^k Design	
	 4.2 The One-Quarter Fraction of the 2^k Design 4.3 The General 2^{kp} Fractional Factorial Design 	
	4.4 Resolution III Designs	
	4.5 Resolution IV and V Designs	
	4.6 Fractional Factorial Split-Plot Designs	
05	Response Surface Methods and Designs	07
0.5	5.1 Introduction to Response Surface Methodology	07
	5.2 The Method of Steepest Ascent	
	5.3 Analysis of a Second-Order Response Surface	
	5.4 Experimental Designs for Fitting Response Surfaces	
06	Taguchi Approach	04
	6.1 Crossed Array Designs and Signal-to-Noise Ratios	
	6.2 Analysis Methods	
	6.3 Robust design examples	
L		1

Course Code	Course Name	Credits
ILO7015	Operations Research	03

- 1. Formulate a real-world problem as a mathematical programming model.
- 2. Understand the mathematical tools that are needed to solve optimization problems.
- 3. Use mathematical software to solve the proposed models.

Course Outcomes: Learner will be able to...

- 1. Understand the theoretical workings of the simplex method, the relationship between a linear program and its dual, including strong duality and complementary slackness.
- 2. Perform sensitivity analysis to determine the direction and magnitude of change of a model's optimal solution as the data change.
- 3. Solve specialized linear programming problems like the transportation and assignment problems, solve network models like the shortest path, minimum spanning tree, and maximum flow problems.
- 4. Understand the applications of integer programming and a queuing model and compute important performance measures

Module	Content	Hrs.
Module 01		
02	 Problems, Gomory's cutting plane Algorithm, Branch and Bound Technique. Introduction to Decomposition algorithms. Queuing models: queuing systems and structures, single server and multi-server models, Poisson input, exponential service, constant rate service, finite and infinite negative. 	05
03	infinite population Simulation: Introduction, Methodology of Simulation, Basic Concepts, Simulation Procedure, Application of Simulation Monte-Carlo Method: Introduction, Monte-Carlo Simulation, Applications of Simulation, Advantages of Simulation, Limitations of Simulation	05
04	Dynamic programming . Characteristics of dynamic programming. Dynamic programming approach for Priority Management employment smoothening, capital budgeting, Stage Coach/Shortest Path, cargo loading and Reliability problems.	05
05	Game Theory. Competitive games, rectangular game, saddle point, minimax (maximin) method of optimal strategies, value of the game. Solution of games	05

	with saddle points, dominance principle. Rectangular games without saddle point – mixed strategy for 2 X 2 games.	
06	Inventory Models : Classical EOQ Models, EOQ Model with Price Breaks, EOQ with Shortage, Probabilistic EOQ Model,	05

Assessment:

Internal Assessment for 20 marks:

Consisting Two Compulsory Class Tests

First test based on approximately 40% of contents and second test based on remaining contents (approximately 40% but excluding contents covered in Test I)

IL07017	Disaster Management and Mitigation Measures	03
Course Code	Course Name	Credits

- 1. To understand physics and various types of disaster occurring around the world
- 2. To identify extent and damaging capacity of a disaster
- 3. To study and understand the means of losses and methods to overcome /minimize it.
- 4. To understand role of individual and various organization during and after disaster
- 5. To understand application of GIS in the field of disaster management
- 6. To understand the emergency government response structures before, during and after disaster

Course Outcomes: Learner will be able to...

- 1. Get to know natural as well as manmade disaster and their extent and possible effects on the economy.
- 2. Plan of national importance structures based upon the previous history.
- 3. Get acquainted with government policies, acts and various organizational structure associated with an emergency.
- 4. Get to know the simple do's and don'ts in such extreme events and act accordingly.

Module	Content	Hrs.
01	Introduction	03
	Definition of Disaster, hazard, global and Indian scenario, general perspective,	
	importance of study in human life, Direct and indirect effects of disasters, long	
	term effects of disasters. Introduction to global warming and climate change.	
02	Natural Disaster and Manmade disasters:	09
	2.1 Natural Disaster: Meaning and nature of natural disaster, Flood, Flash flood,	
	drought, cloud burst, Earthquake, Landslides, Avalanches, Volcanic eruptions,	
	Mudflow, Cyclone, Storm, Storm Surge, climate change, global warming, sea	
	level rise, ozone depletion	
	2.2 Manmade Disasters: Chemical, Industrial, Nuclear and Fire Hazards. Role	
	of growing population and subsequent industrialization, urbanization and	
	changing lifestyle of human beings in frequent occurrences of manmade	
	disasters.	
03	Disaster Management, Policy and Administration	06
	3.1 Disaster management: meaning, concept, importance, objective of disaster	
	management policy, disaster risks in India, Paradigm shift in disaster	
	management.	
	3.2 Policy and administration:	
	Importance and principles of disaster management policies, command and co-	
	ordination of in disaster management, rescue operations-how to start with and	
	how to proceed in due course of time, study of flowchart showing the entire	
	process.	0.6
04	Institutional Framework for Disaster Management in India:	06
	4.1 Importance of public awareness, Preparation and execution of emergency	
	management program. Scope and responsibilities of National Institute of Disaster	
	Management (NIDM) and National disaster management authority (NDMA) in	
	India. Methods and measures to avoid disasters, Management of casualties, set up	
	of emergency facilities, importance of effective communication amongst different	
	agencies in such situations.	
	4.2 Use of Internet and softwares for effective disaster management. Applications	
	of GIS, Remote sensing and GPS in this regard.	

05	Financing Relief Measures:	09
	5.1 Ways to raise finance for relief expenditure, role of government agencies and	
	NGO's in this process, Legal aspects related to finance raising as well as overall	
	management of disasters. Various NGO's and the works they have carried out in	
	the past on the occurrence of various disasters, Ways to approach these teams.	
	5.2 International relief aid agencies and their role in extreme events.	
06	Preventive and Mitigation Measures:	06
	6.1 Pre-disaster, during disaster and post-disaster measures in some events in	
	general	
	6.2 Structural mapping: Risk mapping, assessment and analysis, sea walls and	
	embankments, Bio shield, shelters, early warning and communication	
	6.3 Non Structural Mitigation: Community based disaster preparedness, risk	
	transfer and risk financing, capacity development and training, awareness and	
	education, contingency plans.	
	6.4 Do's and don'ts in case of disasters and effective implementation of relief	
	aids.	

Assessment:

Internal Assessment for 20 marks:

Consisting Two Compulsory Class Tests

First test based on approximately 40% of contents and second test based on remaining contents (approximately 40% but excluding contents covered in Test I)

End Semester Examination:

Weightage of each module in end semester examination will be proportional to number of respective lecture hours mentioned in the curriculum.

- 1. Question paper will comprise of total six questions, each carrying 20 marks
- 2. Question 1 will be compulsory and should cover maximum contents of the curriculum
- **3. Remaining questions will be mixed in nature** (for example if Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3)
- 4. Only Four questions need to be solved.

(Learners are expected to refer reports published at national and International level and updated information available on authentic web sites)

Course Code	Course Name	Credits
ILO7018	Energy Audit and Management	03

- 1. To understand the importance energy security for sustainable development and the fundamentals of energy conservation.
- 2. To introduce performance evaluation criteria of various electrical and thermal installations to facilitate the energy management
- 3. To relate the data collected during performance evaluation of systems for identification of energy saving opportunities.

Course Outcomes: Learner will be able to...

- 1. To identify and describe present state of energy security and its importance.
- 2. To identify and describe the basic principles and methodologies adopted in energy audit of an utility.
- 3. To describe the energy performance evaluation of some common electrical installations and identify the energy saving opportunities.
- 4. To describe the energy performance evaluation of some common thermal installations and identify the energy saving opportunities
- 5. To analyze the data collected during performance evaluation and recommend energy saving measures

Module	Content	Hrs.
01	Energy Scenario:	
	Present Energy Scenario, Energy Pricing, Energy Sector Reforms, Energy	
	Security, Energy Conservation and its Importance, Energy Conservation Act-2001	04
	and its Features. Basics of Energy and its various forms, Material and Energy	
	balance	
02	Energy Audit Principles:	08
	Definition, Energy audit- need, Types of energy audit, Energy management	
	(audit) approach-understanding energy costs, Bench marking, Energy	
	performance, Matching energy use to requirement, Maximizing system	
	efficiencies, Optimizing the input energy requirements, Fuel and energy	
	substitution. Elements of monitoring& targeting; Energy audit Instruments; Data	
	and information-analysis.	
	Financial analysis techniques: Simple payback period, NPV, Return on investment	
	(ROI), Internal rate of return (IRR)	
03	Energy Management and Energy Conservation in Electrical System:	10
4	Electricity billing, Electrical load management and maximum demand Control;	
-	Power factor improvement, Energy efficient equipments and appliances, star	
	ratings.	
	Energy efficiency measures in lighting system, Lighting control: Occupancy	
	sensors, daylight integration, and use of intelligent controllers.	
	Energy conservation opportunities in: water pumps, industrial drives, induction	
01	motors, motor retrofitting, soft starters, variable speed drives.	10
04	Energy Management and Energy Conservation in Thermal Systems:	10
•	Review of different thermal loads; Energy conservation opportunities in: Steam	
	distribution system, Assessment of steam distribution losses, Steam leakages,	
	Steam trapping, Condensate and flash steam recovery system.	
	General fuel economy measures in Boilers and furnaces, Waste heat recovery, use	
	of insulation- types and application. HVAC system: Coefficient of performance,	
	Capacity, factors affecting Refrigeration and Air Conditioning system	
	performance and savings opportunities.	

University of Mumbai

05	Energy Performance Assessment:	04
	On site Performance evaluation techniques, Case studies based on: Motors and	
	variable speed drive, pumps, HVAC system calculations; Lighting System:	
	Installed Load Efficacy Ratio (ILER) method, Financial Analysis.	
06	Energy conservation in Buildings:	03
	Energy Conservation Building Codes (ECBC): Green Building, LEED rating,	
	Application of Non-Conventional and Renewable Energy Sources	

Assessment:

Internal Assessment for 20 marks:

Consisting Two Compulsory Class Tests

First test based on approximately 40% of contents and second test based on remaining contents (approximately 40% but excluding contents covered in Test I)

End Semester Examination:

Weightage of each module in end semester examination will be proportional to number of respective lecture hours mentioned in the curriculum.

- 1. Question paper will comprise of total six questions, each carrying 20 marks
- 2. Question 1 will be compulsory and should cover maximum contents of the curriculum
- 3. Remaining questions will be mixed in nature (for example if Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3
- 4. Only Four questions need to be solved.

Course Code	Course Name	Credits
ILO7019	Development Engineering	03

1. To understand the characteristics of rural Society and the Scope, Nature and Constraints of rural

Development.

- 1. To study Implications of 73rd CAA on Planning, Development and Governance of Rural Areas
- 2. An exploration of human values, which go into making a 'good' human being, a 'good' professional, a 'good' society and a 'good life' in the context of work life and the personal life of modern Indian professionals
- 3. To understand the Nature and Type of Human Values relevant to Planning Institutions

Course Outcomes: Learner will be able to...

- 1. Apply knowledge for Rural Development.
- 2. Apply knowledge for Management Issues.
- 3. Apply knowledge for Initiatives and Strategies
- 4. Develop acumen for higher education and research.
- 5. Master the art of working in group of different nature.
- 6. Develop confidence to take up rural project activities independently

Module	Content	Hrs.
01	Introduction to Rural Development Meaning, nature and scope of development;	08
	Nature of rural society in India; Hierarchy of settlements; Social, economic and	
	ecological constraints for rural development Roots of Rural Development in India	
	Rural reconstruction and Sarvodaya programme before independence; Impact of	
	voluntary effort and Sarvodaya Movement on rural development;	
	Constitutional direction, directive principles; Panchayati Raj - beginning of	
	planning and community development; National extension services.	
02	Post-Independence rural Development Balwant Rai Mehta Committee - three tier	04
	system of rural local Government; Need and scope for people's participation and	
	Panchayati Raj; Ashok Mehta Committee - linkage between Panchayati Raj,	
	participation and rural development	
03	Rural Development Initiatives in Five Year Plans Five Year Plans and Rural	06
	Development; Planning process at National, State, Regional and District levels;	
	Planning, development, implementing and monitoring organizations and agencies;	
	Urban and rural interface - integrated approach and local plans; Development	
	initiatives and their convergence; Special component plan and sub-plan for the	
	weaker section; Micro-eco zones; Data base for local planning; Need for	
	decentralized planning; Sustainable rural development.	
04	Post 73rd Amendment Scenario 73rd Constitution Amendment Act, including - XI	04
	schedule, devolution of powers, functions and finance; Panchayati Raj institutions	
	- organizational linkages; Recent changes in rural local planning; Gram Sabha -	
	revitalized Panchayati Raj; Institutionalization; resource mapping, resource	
	mobilization including social mobilization; Information Technology and rural	
	planning; Need for further amendments.	
05	Values and Science and Technology Material development and its values; the	10
	challenge of science and technology; Values in planning profession, research and	
	education.	
	Types of Values Psychological values — integrated personality; mental health;	
	Societal values — the modern search for a good society; justice, democracy, rule	

	of law, values in the Indian constitution;	
	Aesthetic values — perception and enjoyment of beauty; Moral and ethical values;	
	nature of moral judgment; Spiritual values; different concepts; secular spirituality;	
	Relative and absolute values;	
	Human values— humanism and human values; human rights; human values as	
	freedom, creativity, love and wisdom.	
06	Ethics Canons of ethics; ethics of virtue; ethics of duty; ethics of responsibility;	04
	Work ethics;	
	Professional ethics; Ethics in planning profession, research and education	

Assessment:

Internal Assessment for 20 marks:

Course Code	Name of the Course	Credit
AEL701	Vehicle Maintenance Lab	01

- 1. To identify and layout the physical facilities necessary for an automotive service and maintenance workshop
- 2. To identify the equipment and tools necessary for the operation of an automotive service and maintenance workshop
- 3. To define the different job positions that are needed in the automotive service and maintenance workshop
- 4. To identify some of the fundamental traits of human behaviour in the automotive service industry.
- 5. To familiarize with fault diagnosis techniques used in automobiles.
- 6. To acquaint with the procedure to operate machine and equipment of a modern automotive service and maintenance workshop.

Course Outcomes: After completion of this course, Learner will be able to...

- 1. Draw layout of automobile workshop and its usefulness.
- 2. Identify the various equipment and tools necessary for the operation of an automotive repair shop
- 3. Identify the various faults in the engine system on an actual vehicle in the workshop.
- 4. Perform Computerized Wheel alignment operation.
- 5. Perform Wheel Balancing operation.
- 6. Perform removal and re-fitting of the tyre using an automatic tyre changer.

Term Work:

A) List of Experiments: The laboratory Experiments should be based on the following:

- 1. Prepare a layout of an automobile service and maintenance workshop.
- 2. Prepare the list of different types of tools & instruments and statements/records required for the repair and maintenance works.
- 3. Detect faults using fault diagnosis techniques/equipment such as scanners in Engine/ electrical/electronic ignition systems.
- 4. Identify and rectify faults in the electrical systems such as Starting system and charging system.
- 5. Identify and rectify faults in the electrical systems such as Headlights, Side lamps or Parking lights, Electric horns.
- 6. Perform wheel balancing on a computerized wheel balancer.
- 7. Perform wheel alignment activity to set proper steering geometry
- 8. Perform removal and refitting of the tyre using an automatic tyre changer

B) Mini Project/Case Study: The students are expected to carry out a mini project/case study in a group of 2-3 to acquire soft skills as well as diagnostics expertise as required in a modern automotive workshop.

Assessment: Term Work:

Term work shall consist of experiments from the list.

The distribution of marks for term work shall be as follows:

Laboratory work (Experiments):	15 marks
Mini Project/Case Study:	05 marks
Attendance:	05 marks

The final certification and acceptance of term work ensure the satisfactory performance of laboratory work and minimum passing in the term work.

End Semester Practical/Oral Examination:

- 1. Pair of Internal and External Examiner should conduct practical/viva based on the list of experiments
- Distribution of marks for practical/viva examination shall be as follows:
 Practical performance: 15 marks
 Oral: 10 marks
- 1. Evaluation of practical examination to be done based on the experiment performed and the output of the experiment during practical examination.

Students work along with evaluation report to be preserved till the next examination

AEL702	Vehicle Dynamics lab	01
Course Code	Name of the Course	Credits

- 1. To familiarize with basic concepts of vehicle dynamics.
- 2. To acquaint with simulation process using software in domain of vehicle dynamics.

Course Outcomes: After completion of this course, Learner will be able to...

- 1. Plot performance characteristic curves for shock absorber.
- 2. Simulate ride behaviour using quarter car model
- 3. Simulate ride behaviour using half car model
- 4. Simulate using different road profiles for quarter car and half car model.
- 5. Calculate drag coefficient for different vehicles
- 6. Perform test on chassis dynamometer

Term work:

Term work shall consist of minimum 5 exercises, from the list, 6 assignments covering maximum portion of the syllabus (one on each module) or case study or mini project based on topics related to vehicle Dynamics. The case study or mini project is assigned for group of students and number of students in a group should not be more than two. The introduction of vehicle dynamics systems using any of the Dynamics software (like CARSIM etc) can be given to the students as a part of term work.

List of Experiments:

- 1. To plot characteristic curves for shock absorber.
- 2. Simulation of Quarter car model for pitch and bounce.
- 3. Simulation of Quarter car model for different road profiles
- 4. Simulation of Half car model for pitch and bounce.
- 5. Simulation of Half car model for different road profiles.
- 6. Experimental studies of measurements of drag and lift coefficient for different geometry vehicle using wind tunnel apparatus.
- 7. To perform test on chassis dynamometer

Term work:

The distribution of marks for term work shall be as follows:

- 1. Laboratory work (5 Experiments) :10 marks
- 2. Case study/ Mini Project: 10 marks
- 3. Attendance: 05 marks

Practical and oral Examination:

Pair of Internal and External Examiner should conduct practical/Oral based on contents. Distribution of marks for practical and oral examination shall be as follows:

Practical performance 15 marks

Oral 10 marks

Evaluation of practical examination to be done based on the experiment performed and the output of the experiment during practical examination.

Students work along with evaluation report to be preserved till the next examination

Course Code	Course Name	Credit
AEL 703	Industrial Skills	01

Course Rationale: This course has been designed to prepare final year automobile engineering students for placements, as well as to build computer skills and advanced soft skills to make them ready for a career in the industry.

Course Objectives:

- 1. To familiarize students with basic computer/IT skills in the industry.
- 2. To practice soft skills and communication to be industry-ready.
- 3. To inculcate critical thinking and problem-solving abilities for efficient team and project outcomes.
- 4. To be prepared for campus placements by practicing aptitude, logical reasoning, Group discussion and personal interview rounds.

Course Outcomes: At the end of the course, the learners will be able to

- 1. Skillfully prepare and edit documents and slides on MS Word and MS PowerPoint etc.
- 2. Execute functions on MS Excel.
- 3. Learn how to navigate tasks and execute functions in G-suite.
- 4. Understand and practice metacognitive skills of creativity and problem solving.
- 5. Hone team building and leadership skills.
- 6. Perform well in campus placement rounds by practicing Aptitude, Logical reasoning, Group Discussion and Personal Interviews.

Module	List of Experiments and Activities	No. of Lab			
mouule	List of Experiments and Activities	sessions			
		(*2hrs)			
1	Computer/IT skills	6			
1.1	Basics of Computers- Desktop/Laptop operations				
1.2	Microsoft Office				
1.2.1	MS Word- Assignment to Create and use various commands in a				
	Word document (Page setup, text formatting, templates, SmartArt,				
	Title and Ribbon bar, Editing etc.)				
1.2.2	MS Excel-Assignment to Create and tabulate a spreadsheet (Excel-				
	data analysis, charts, pivot tables, VBA, etc.)				
1.2.3	MS- Power point- Assignment to design and use a Presentation				
	Software (MSPPT, Prezi, etc. – Presentation design, templates,				
	custom slides, animation, graphs, charts, troubleshooting etc.)				
1.2.4	MS Outlook (Navigation, archiving, tasks distribution, filters,				
	scheduling etc.)				
1.3	G-Suite (Gmail, G-Meet, Calendar, Sheets, Docs, Slides etc.)				
1.4	An introduction to the typesetting package LATEX.				
2	Aptitude and Logical Reasoning	2			
2.1	Aptitude – Aptitude training, types of questions, mock tests				
2.2	Logical Reasoning – Verbal and Non-verbal reasoning, Types of				
	questions, Mock tests				
3	Developing Metacognitive skills	2			
3.1	Task orientation and Goal setting (can be based on Final year				
3.2	Project):				
	Creativity and Problem-solving				
4	Collaborative Techniques: Team building skills	1			
4.1	Activities on Team building				
4.2	Case studies on Leadership, Decision making and Team building				

5	GD – PI	2]
5.1	Group Discussion – Factual, Strategic, Abstract, Case study, Picture		
5.2	based		
	Personal Interview–Types of Interview Questions, Strategies, Sample answers, Mock Interviews		

Assignments: Assignments and activities should enable a steady progress in developing the aforementioned skills. A record of the conducted activities can be attached in journal as image printouts, and write up of case studies.

- 1. Application of MS Office skills (Individual)
 - Create and edit Word documents
 - Create and execute MS Excel functions
 - Create and enhance MS PPT
- 2. Writing a simple document in LATEX editor and running the typesetter program to produce finished document
- 3. Aptitude and Logical reasoning tests/practice sheets
- 4. Team building skills: Activities/Tasks to be performed as a team of 3 or 4 students.
- 5. Group Discussions

Case studies on problem-solving to be done as a team activity. Personal Interview questionslog book

Assessment: Total – 50 Marks

Marks distribution will be as follows:

FINAL TERM WORK – 25 Marks

Assignments (Journal) – 20 Marks

Attendance - 05 Marks

ORALS/Written – 25 Marks

- 1. Aptitude Test (Written) 15 Marks
- 2. Mock Interview (Orals) 10 Marks

AEP701	Major Project I	03
Course Code	Course Name	Credit

Course Objectives: The course aims:

The Project work facilitates the students to develop and prove Technical, Professional and Ethical skills and knowledge gained during graduation program by applying them from problem identification, analyzing the problem and designing solutions.

Course Outcomes:

- 1. Students will be able to develop the understanding of the problem domain through extensive review of literature.
- 2. Students will be able to identify and analyze the problem in detail to define its scope with problem specific data.
- 3. Students will be able to identify various techniques to be implemented for the selected problem and related technical skills through feasibility analysis.
- 4. Students will be able to design solutions for real-time problems that will positively impact society and environment.
- 5. Students will be able to develop clarity of presentation based on communication, teamwork and leadership skills.
- 6. Students will be able to inculcate professional and ethical behavior.

Guidelines:

•

1. Project Topic Selection and Allocation:

- Project topic selection Process to be defined and followed:
 - Project orientation can be given at the end of sixth semester.
 - Students should be informed about the domain and domain experts whose guidance can be taken before selecting projects.
 - Student's should be recommended to refer papers from reputed conferences/ journals like IEEE, Elsevier, ACM etc. which are not more than 3 years old for review of literature.
 - Students can certainly take ideas from anywhere, but be sure that they should evolve them in the unique way to suit their project requirements. Students can be informed to refer Digital India portal, SIH portal or any other hackathon portal for problem selection.
- Topics can be finalized with respect to following criterion:
 - **Topic Selection**: The topics selected should be novel in nature (Product based, Application based or Research based) or should work towards removing the lacuna in currently existing systems.
 - **Technology Used:** Use of latest technology or modern tools can be encouraged.

Students should not repeat work done previously (work done in the last three years).

- Project work must be carried out by the group of at least 2 students and maximum 4.
- The project work can be undertaken in a research institute or organization/Industry/any business establishment. (out-house projects)
- The project proposal presentations can be scheduled according to the domains and should be judged by faculty who are expert in the domain.
- Head of department and senior staff along with project coordinators will take decision regarding final selection of projects.
- Guide allocation should be done and students have to submit weekly progress report to the internal guide.
- Internal guide has to keep track of the progress of the project and also has to maintain attendance report. This progress report can be used for awarding term work marks.

• In case of industry/ out-house projects, visit by internal guide will be preferred and external members can be called during the presentation at various levels

2. Project Report Format:

At the end of semester, each group need to prepare a project report as per the guidelines issued by the University of Mumbai.

A project report should preferably contain at least following details:

- Abstract
- Introduction
- Literature Survey
- Survey of Existing systems
- Limitations of Existing systems or research gaps
- Motivation (Challenges that are encouraging to choose the problem)
- Problem Statement and Proposed Solution
- Scope of the system
- Proposed System
 - General Workflow/Block diagram
- Analysis and Modeling (only applicable diagrams)
- Design
 - Architectural View
 - o Algorithms/ Methodology
- Experimental Set up
 - Details of Database or details about input to systems or selected data
 - Performance Evaluation Parameters (for Validation)
 - Software and Hardware Set up
 - Implementation Plan for Next Semester
 - Timeline Chart for Term1 and Term-II (Project Management tools can be used.)
- Summary
- References

Desirable

•

• Students can be asked to undergo some Certification course (for the technical skill set that will be useful and applicable for projects.)

3.Term Work:

Distribution of marks for term work shall be done based on following:

a. Weekly Log Report

b. Project Work Contribution

c. Project Report (Spiral Bound) (both side print)

d. Term End Presentation (Internal)

The final certification and acceptance of TW ensures the satisfactory performance on the above aspects.

4. Oral & Practical:

Oral &Practical examination (Final Project Evaluation) of Project 1 should be conducted by Internal and External examiners approved by University of Mumbai at the end of the semester.

Suggested quality evaluation parameters are as follows:

- 1. Quality of problem selected
- 2. Clarity of problem definition and feasibility of problem solution
- 3. Relevance to the specialization / industrial trends
- **4.** Originality
- 5. Clarity of objective and scope
- 6. Quality of analysis and design
- 7. Quality of written and oral presentation
- 8. Individual as well as team work

University of Mumbai
