Preamble

To meet the challenge of ensuring excellence and NEP 2020 policy in engineering education, the issue of quality needs to be addressed, debated, and taken forward systematically. Accreditation is the principal means of quality assurance in higher education. The major emphasis of the accreditation process is to measure the outcomes of the program that is being accredited. In line with this Faculty of Science and Technology (in particular Engineering) of the University of Mumbai has taken the lead in incorporating the philosophy of NEP 2020 education in the process of curriculum development.

The second-year engineering course is a core training program to impart scientific and logical thinking training to learners in general, with a choice of course selection from the program core course, multidisciplinary minor, and vocational skill-enhanced course. Simultaneously, the objectives of NEP 2020 demand nurturing the core program and skills required for the Information Technology Branch of engineering in the learner. Keeping this in view, a pool of courses is offered in Core Courses covering fundamentals required to understand core and modern engineering practices and emerging trends in technology. Considering the shift in pedagogy and the convenience of a stress-free learning process, a choice-based subject pool is offered in the coursework under the heads of Information Technology in Engineering for open electives and multidisciplinary minor courses in the third and fourth semesters. Essentially, to give a glimpse of trends in the industry under vocational and enhanced skill practices, the pool is offered to nurture and develop creative skills in contemporary industrial practices. Criteria met in the structure is the opportunity for learners to choose the course of their interest in all disciplines.

Program Core Course Cover Electronics Engineering core courses. Also, OE and MDM where a pool of subjects are given for selection. Considering the present scenario, diverse choices need to be made available to fulfill the expectation of a learner to aspire for a career in the field of current trends of Technology and interdisciplinary research. Ability enhancement can be achieved in Undergraduate training by giving an objective viewpoint to the learning process and transitioning a learner from a rote learner to a creative professional. for the purpose Design Thinking is introduced in the First Semester to orient a journey learner to become a skilled professional. Considering the NEP-2020 structure of award of Certificate & Diploma at multiple exit-point pools of Vocational skills is arranged for giving exposure to the current Industry practices.

The faculty resolved that course objectives and course outcomes are to be clearly defined for every course so that all faculty members in affiliated higher education institutes understand the depth and approach of the course to be taught, which will enhance the learner‟s learning process. NEP 2020 grading system enables a much-required shift in focus from teacher-centric to continuous-based learner-centric education since the workload estimated is based on the investment of time in learning and not in teaching. It also focuses on continuous evaluation, which will enhance the quality of education. Credit assignment for courses is based on a 15-week teaching-learning process for NEP 2020, however, the content of courses is to be taught in 12-13 weeks, and the remaining 2-3 weeks are to be utilized for revision, tutorial, guest lectures, coverage of content beyond the syllabus, etc.

There was a concern that in the present system, the second-year syllabus must not be heavily loaded to the learner and it is of utmost importance that the learner entering into the second year of an engineering course should feel at ease by lowering the burden of syllabus and credits. This is necessary for a learner to get accustomed to the new environment of a college and to create a bond between the teacher and the learner. The present curriculum will be implemented for the Second Year of Engineering from the academic year 2054-26. Subsequently, this system will be carried forward for Third Year and Final Year Engineering in the academic years 2026-27, and 2027-28, respectively.

Course Objectives:

1. To build a strong foundation in mathematics, provide students with the mathematics fundamentals necessary to formulate, solve and analyse complex engineering problems.
2. To prepare the students to apply reasoning informed by contextual knowledge to engineering practice, and to work as part of teams on multi-disciplinary projects.

Pre-requisite Course Codes	BSC101-Applied Mathematics-I, BSC102-Applied Mathematics-II	
Course Outcomes	After the successful completion, students should be able to	
	CO1	Understand the concept of Laplace transform and its application to solve the real integrals in engineering problems.
	CO2	Understand the concept of inverse Laplace transform of various functions and its applications in engineering problems.
	CO3	Expand the periodic function by using Fourier series for real life problems and complex engineering problems.
	CO4	Apply the concept of vector spaces and orthogonalization process in Engineering Problems
	CO5	Apply the concepts Linear transformations in image processing.
	CO6	Apply the concepts of Eigen values and Eigen vectors to concepts of PCA and image processing.

Module No.	Topics	References	No. of Hours
01	**Laplace Transforms:** 1.1 Definition of Laplace transform, Condition of Existence of Laplace transform. 1.2 Laplace Transform (L) of Standard Functions like e^{at}, sin(at), cos(at), sinh(at), cosh(at) and t^n, n ≥ 0. 1.3 Properties of Laplace Transform: Linearity, First Shifting theorem, change of scale Property, multiplication by t, Division by t, Laplace Transform of derivatives and integrals (Properties without proof). 1.4 Evaluation of integrals by using Laplace Transformation.	[1], [3]	5
02	**Inverse Laplace Transform:** 2.1 Inverse Laplace Transform, Linearity property, use of standard formulae tofind inverse Laplace Transform, finding Inverse Laplace transform usingderivatives. 2.2 Partial fractions method to find inverse Laplace transform. 2.3 Inverse Laplace transform using Convolution theorem (without proof).	[1], [3]	4
03	**Fourier Series:** 3.1 Dirichlet‟s conditions, Definition of Fourier series and Parseval‟s Identity (without proof). 3.2 Fourier Series on interval (c, c+2l). 3.3 Half range Sine and Cosine Series.	[1], [3]	5
04	**Vectors spaces**: 4.1 Vectors spaces in N dimensional, Finite dimensional Vector spaces, Linear Span, Basis, dimension, Subspace, Cauchy Schwartz Inequality 4.2 Inner Product spaces, Norm, Orthogonal Vectors, Orthogonal Projection and Orthogonal Complements, Gram Schmidt Orthogonalization Process	[2], [4]	4
05	**Linear Transformation:** 5.1 Linear Transformation, types of linear operators (Reflection Projection, Rotation, Contraction, Dialtion, shear), Kernel & Range of Linear Transformation, Rank Nullity Theorem (without proof) 5.2 Matrix of a linear Transformation, Composition of Liner Transformation and Inverse of liner transformation 5.3. Effect of Change of Bases on Linear Operators	[2], [4]	4
06	**Matrix: Eigen values & Eigen vectors:** 6.1 Characteristic equation, Eigen values and Eigen vectors, Example based on properties of Eigen values and Eigen vectors. (Without Proof). 6.2. Similarity of Matrices, Diagonalization of Matrices and Functions of Square matrices	[2], [4]	4
			26

8. Linear Algebra, F. Stephen Friedberg, Arnold Insel, Lawrence Spence, Prentice Hall of India.

Term Work:

General Instructions:

1. Batch wise tutorials are to be conducted. The number of students per batch should be as per University pattern for practicals.
2. Students must be encouraged to write 6 class tutorials on entire syllabus.

Tutorial Guidelines:

Tutorial should be conducted batch wise. Tutorial work will be graded from 20 marks .

Distribution of Term work Marks

1	Attendance	5
2	Class tutorials	20

Course Code	Course Name	Teaching Scheme (Hrs/week)			Credits Assigned

		Theory	20	20	60		100	

Pre-requisite Course Codes	ESC 102,BSC102, BSC202,
Course Outcomes	After the successful completion students should be able to
	CO1 Demonstrate semiconductor applications
	CO2 Students will be understand working characteristics of various semiconductor devices
	CO3 Students will be able to perform dc analysis/design electronic Circuits using BJT DC analysis.
	CO4 Students will be able to perform ac analysis of BJT amplifier circuits.
	CO5 Students will be understand the operation and bias circuits of MOSFET.
	CO6 Students will be understand AC analysis of MOSFET circuits.

Module No.	Unit No.	Topics	Reference	Hrs.
Module 1	1	**Clippers & Clampers**		6Hrs
	1.1	Theoretical description of basic structure & construction of p n junction diode, symbol, operation under zero bias, forward bias & reverse bias, avalanche breakdown, V-I characteristics & temperature effects (no mathematical analysis or numerical examples).	1,2	
	1.2	Application of P-N junction diode as clippers & clampers (different types of configurations with input-output waveforms & transfer characteristics; theoretical description & analysis of each circuit; numerical examples)		
Module 2	2	**Rectifiers & Filters**		6Hrs
	2.1	Rectifiers: Working & mathematical analysis of full – wave center tapped rectifier & bridge type rectifier (mathematical analysis include expressions for the DC / average & RMS output voltage, DC / average & RMS output current & ripple factor; numerical examples included)	1,2	
	2.2	Filters: Capacitor (C), Inductor (L), Inductor – Capacitor (LC), C-L-C (π) with circuit diagram, waveforms, working / operation & expression for ripple factor (theoretical description only – no analysis or numerical examples to be included)		

Module 3	**3**	**Bipolar Junction Transistor Based Circuits**	1,2 3, 4	8 Hrs
	3.1	DC Circuit Analysis: DC load line and region of operation, common bipolar transistor configurations, biasing circuits, bias stability and compensation, analysis and design of biasing circuits.		
	3.2	AC Analysis of BJT Amplifiers: AC load line, small signal models (h-parameter model, Hybrid-pi model), graphical analysis, ac equivalent circuits and analysis to obtain voltage gain, current gain, input impedance, output impedance of CE, CB and CC amplifiers.		
	3.3	Design of CE Amplifier		
Module 4	**4**	**MOSFET Based Circuits**		8 Hrs
	4.1	DC Circuit Analysis: DC load line and region of operation, common-MOSFETs configurations, analysis and design of biasing circuits	1,2 ,3,4	
	4.2	AC Analysis: AC load line, small-signal model of MOSFET at high and low frequency and its equivalent circuit, small-signal analysis of MOSFET amplifiers, common-source, source follower, common gate.		
	4.3	Design of CS Amplifier using MOSFETS		
Module 5	**5**	**Power Amplifier**		5Hrs
	5.1	Introduction to power amplifiers, difference between voltage and power amplifiers.	2,5,6,7	
	5.2	Classification of Class A, Class-B, Class- AB, Class-C power amplifiers, power amplifier using MOSFET		
Module 6	**6**	**Power Electronic Devices**		6Hrs
	6.1	Introduction to power electronic devices and its needs.	9,10	
	6.2	Introduction, scope and application, construction and characteristics of thyristors, power MOSFET, IGBT, IGCT and GTO,		
	6.3	Applications of power electronic devices		
			Total	**39**

Course Assessment:

Theory:

IA1: 20 Marks written examination for one hour

		Theory	20	20	60		100	

Pre-requisite Course Codes	C Programming (VSEC102)	
Course Objectives	1. To understand basic linear and non-linear data structures. 2. To implement various operations on Arrays, linked list, stack, queue, binary tree, and graph. 3. To study different sorting and searching techniques. 4. To analyze efficient data structures to solve real world problems.	
Course Outcomes	After the successful completion students should be able to	
	CO1	Implement various linear data structures.
	CO2	Implement various nonlinear data structures.
	CO3	Perform operations on data structures
	CO4	Analyze appropriate sorting and searching techniques for a given problem.
	CO5	Develop solutions for real world problems by selecting appropriate data structure and algorithms.
	CO6	Analyze the complexity of the given algorithms.

Module No.	Unit No.	Topics	Reference	Hrs
1		**Introduction to Data Structures and Algorithms**	3,6,8	3
	1.1	Introduction to Data Structures, Types of Data Structures – Linear and Nonlinear, Operations on Data Structures.		
	1.2	Introduction to Analysis of Algorithms, characteristics of algorithms, Time and Space complexities, Asymptotic notations.		
2		**Stack and Queues**	1,2,3,4	5
	2.1	Introduction,Basic Stack Operations, Representation of a Stack using Array, Applications of Stack: Infix to Postfix Conversion and Postfix Evaluation.		
	2.2	Queue, Operations on Queue, types of queues.		
3		**Linked List**	3,5,7,9	5
	3.1	Introduction, Representation of Linked List, Linked List v/s Array, Types of Linked List - Singly Linked List, Doubly Linked List and		

		Circular Linked List, Operations on Singly Linked List. Implementation of Stack and Queue using Singly Linked List.		
4		**Trees**	3, 5, 6, 8	5
	4.1	Introduction, Tree Terminologies, Binary Tree, Types of Binary Tree, Representation of Binary Trees, Binary Tree Traversals, Binary Search Tree, Operations on Binary Search Tree, Applications of Binary Tree- Huffman Encoding.		
5		**Graphs**	3, 5, 6, 8	3
	5.1	Introduction, Graph Terminologies, Representation of graph (Adjacency matrix and adjacency list), Graph Traversals – Depth First Search (DFS) and Breadth First Search (BFS), Application – Topological Sorting.		
6		**Introduction to Sorting and Searching**	3, 5, 6, 8	5
	6.1	Introduction to Searching: Linear search, Binary search Sorting Techniques: Bubble, Insertion, selection, Quick Sort, Merge Sort, Comparison of sorting Techniques.		
	6.2	Hashing Techniques, Different Hash functions, Collision & Collision resolution techniques: Linear and Quadratic probing.		
			Total	**26**

Course Assessment:

Pre-requisite Course Codes	**ESC102: Basic Electrical & Electronics Engineering**	
Course Objectives	Course Objectives: 1. To evaluate electrical networks using various techniques, including nodal, mesh analysis and network theorems. 2. To analyze circuits in time and frequency domain using tools for network analysis and mathematical approaches. 3. To apply network synthesis techniques for two port parameters and network functions, including Foster and Cauer forms. 4. To apply the realizability concept and synthesize passive networks.	
	After the successful completion students should be able to	
Course Outcomes	CO1	Apply the basic concepts, laws, and methods of analyzing DC networks and solve complex electric circuits using network theorems.
	CO2	Apply the fundamental concepts of coupled circuits, including self and mutual inductance, coupling coefficient and analyze the behavior of coupled circuits.
	CO3	Analyze electrical circuits in time domain, including R-C, R-L and R-L-C circuits using differential equations and identify and describe the characteristics of circuit responses, including transient and steady-state response.
	CO4	Apply the fundamental concepts of frequency domain and its application in solving electrical networks.
	CO5	Evaluate transfer function model of system using two port network parameters.
	CO6	Synthesize electrical networks using passive elements.

Module No.	**Unit No.**	**Topics**	**Reference**	**Hrs.**
1		**Analysis of DC Circuits**		4
	1.1	**Analysis of DC circuits with dependent sources using:** Kirchhoff‟s Laws, Mesh Analysis, Supermesh Analysis, Node Analysis, Supernode Analysis.		
	1.2	**Application of Network Theorems to DC Circuits:** Thevenin‟s Theorem, Norton‟s Theorem, Maximum Power Transfer Theorem.		
2		**Magnetic Circuits**		3
	2.1	**Analysis of Coupled Circuits:** Self and mutual inductances, coefficient of coupling, dot convention, equivalent circuit, solution using loop analysis.		
3		**Time Domain Analysis of Electrical Networks**		4
	3.1	**Time Domain Analysis of RLC Circuits:** Initial and final conditions in network elements, Solution of first and second order differential equations for series and parallel R-L, R-C, R-L-C		

		circuits, Transient and steady state response.		
4		**Frequency Domain Analysis of Electrical Networks**		3
	4.1	**Frequency Domain Analysis of RLC Circuits:** S-domain representation, Applications of Laplace Transform in solving electrical networks.		
5		**Two Port Networks**		6
	5.1	**Network Functions:** Driving point and Transfer Function, Poles and Zeros, Analysis of ladder networks		
	5.2	**Two Port Parameters:** Open circuit, Short circuit, Transmission and Hybrid parameters, relationships among parameters, reciprocity and symmetry conditions.		
6		**Synthesis of Electrical Networks**		6
	6.1	**Realizability Concept:** Hurwitz polynomial, Concept of positive real function, testing for necessary and sufficient conditions for positive real functions.		
	6.2	**Synthesis of RC, RL, LC circuits:** Concepts of synthesis of RC, RL, LC driving point functions, Foster and Cauer forms.

Pre-requisite Course Codes	**ESL 102 BEEE Lab, BSL2012 Semiconductor Physics Lab**	
Laboratory Objectives	1.	To deliver a hands-on approach for studying electronic devices
	2	To comprehend characteristics of electronic devices; thereby understanding their behavior
	3.	To analyze & calculate inherent parameters of electronic devices through experimental approach
	4.	To introduce modern software simulation tools for modeling & simulation of electronic devices
Laboratory Outcomes	After the successful completion students should be able to	
	LO1	Understand and analyze the operation of clippers and clampers in shaping and modifying waveforms.
	LO2	Simulate basic electronic circuits through software simulation
	LO3	Analyze electronic circuits using BJT and FET (DC & AC analysis)
	LO4	Verify the performance of the designed amplifier through theoretical analysis, simulation, and practical implementation
	LO 5	Study of static characteristic of power devices through software simulation

Laboratory Experiments:

Sr. No.	Title of experiment	Hardware /Software	Module	Reference
1.	To perform Clippers and Clampers.	Hardware	1	oftware
2.	To perform Full wave/Bridge rectifier with LC/pi filter.	Hardware	2	
3.	SPICE simulation of Full wave/Bridge rectifier with LC/pi filter.	Software	2	
4.	Compare different Biasing Circuits of BJT	Hardware/S	3	

1,3

1,3

5.	To perform AC, DC, Transient and frequency response of single stage CE amplifiers.	Hardware/Software	3	1,2,3
6	Design CE amplifier for a given specification	Hardware/Software	3	1,2,3
7	Compare different Biasing Circuits of MOSFETS	Hardware/Software	4	1,2,3
8.	To perform AC, DC, Transient and frequency response of single stage CS MOSFET amplifiers.	Hardware/Software	4	1,2,3
9.	Design of CS Amplifier for a given specification	Hardware/Software	4	1,2,3
10.	Study of Power Amplifier	Software	5	1,2
11.	Study of static characteristics of SCR	Software	6	1,2
12.	Study of static characteristic of Triac and Diac	Software	6	1,2

Laboratory Assessment:

Assessment:

Term Work: Term Work shall consist of at least 10 to 12 practicals based on the above list. Also, Term work Journal must include at least 2 assignments.

Term Work Marks: 25 Marks (Total marks) = 15 Marks (Experiment) + 5 Marks (Assignments) + 5 Marks (Attendance)

Practical/ Oral Exam: An Oral examination will be held based on the above syllabus.

Recommended Books:

[1] David A Bell, "Laboratory Manual for Electronic Devices and Circuits", 4th edition, PHI, 2001.

[2] Muhammed H Rashid, "SPICE for circuits and electronics using PSPICE", 2nd edition, PHI, 1995

[3] Mithal. G.K, "Practicals in Basic Electronics", G K Publishers Private Limited, 1997.

Term Work:

At least 10 experiments covering the entire syllabus of PCL 302 (Electronic Devices and circuits Lab) should be set to have well predefined inference and conclusion. This must include **50%** Hardware and **50%** Simulation experiments. The experiments should be student centric and attempts should be made to make the experiments meaningful and interesting. Experiments must be graded from time to time. The grades should be converted into marks as per the Credit and Grading System manual and should be added and averaged. The grading and term work assessment should be done based on this scheme. The final certification and acceptance of term work ensures satisfactory performance of laboratory work and minimum passing marks in term work. Practical and Oral exam will be based on the entire syllabus.

Note:

Suggested List of Experiments is indicative. However, flexibility lies with individual course instructors to design and introduce new, innovative and challenging experiments, (limited to maximum 30% variation to the suggested list) from within the curriculum, so that the fundamentals and applications can be explored to give greater clarity to the students and they can be motivated to think differently.

Course Code	Course Name	Teaching Scheme (Hrs/week)			Credits Assigned

		25		25			50	

Pre-requisite Course Codes	PCL201X	
Laboratory Outcomes	After the successful completion students should be able to:-	
	LO 1	To Implement and analyze time and space complexity in sorting
	LO 2	To find minimum and maximum element of an array using divide and conquer strategy
	LO 3	To identify and implement an algorithm to be used in the construction of communication networks
	LO4	Identify and implement an algorithm to be used in disaster management

Module. No.	Exp. No	Name of the experiment
1	1	**Sorting:** Implement and analyze time and space complexity of Modified bubble, Insertion and Selection sort to display exam result of students based on their total marks scored.
2	2	**Divide and Conquer:** Implement and analyze time and space complexity of Quick and Merge sort to display records of an employee working in any organization based on their work experience.
	3	**Divide and Conquer: (Any one)** I. Implement and Analyze time and space complexity of multiplying long Integers using divide and conquer strategy. I. Implement and Analyze time and space complexity of finding minimum and maximum element of an array using divide and conquer strategy
3	4	**Greedy Strategy**: **(Any 2)** I. Identify and implement an algorithm to be used to solve the challenge faced by airline and shipping companies of maximizing revenue while adhering to weight and space constraints when loading cargo onto airplanes or ships.determine the optimal selection and allocation of cargo items based on their values (revenue) and weights, ensuring efficient use of cargo space.
	5	I. Identify and implement an algorithm to be used in the construction of communication networks (telephone or internet networks) where a telecommunication company needs to lay down cables to connect several cities to establish a reliable network infrastructure. The company wants to minimize the cost of laying down cables while ensuring that all cities are

connected and there is no redundancy in the network.

		.Identify and implement an algorithm to be used by vending machines to determine the optimal combination of coins to give as change to customers.
4	6 7	**Dynamic Programming: (Any 2)** I.Identify and implement an algorithm to be used in disaster management and emergency response systems to find the shortest path for emergency vehicles, such as ambulances or fire trucks, to reach affected areas or victims. I.Identify and implement an algorithm to be used to compare DNA /RNA sequences to identify similarities and evolutionary relationships between organisms. .Identify and implement an algorithm to be used by city planners and urban developers to determine the shortest paths between all pairs of locations, such as residential areas, commercial centers, and public facilities, to improve accessibility, reduce traffic congestion, and enhance urban mobility.
5	**8**	**Backtracking: (Any 1)** I.Implement N queen problem I.Identify and implement an algorithm to be used for coloring regions on a map such that adjacent regions do not have same color.
6	**9**	**String Matching:** Identify and implement an algorithm to be used by search engines to quickly locate documents containing specific keywords or phrases, improving search efficiency and response time.

Laboratory Assessment:

Term Work: Term Work shall consist of at least 10 to 12 practicals based on the above list. Also, Term work Journal must include at least 2 assignments.

Term Work Marks: **25 Marks** (Total marks) = 15 Marks (Experiments) + 5 Marks (Assignments) + 5 Marks (Attendance)

Practical/ Oral Exam: An Oral examination will be held based on the above syllabus

Pre-requisite Course Codes	ESC102: Basic Electrical & Electronics Engineering	
Laboratory Objectives	1.	To analyze and solve electrical networks using nodal, mesh analysis and network theorems.
	2	To develop an ability to apply various methods of analysis of electrical circuits under transient and steady state conditions.
	3.	To design and implement simple electrical networks using synthesis techniques.
Laboratory Outcomes	After the successful completion students should be able to	
	LO 1	Apply basic concepts of electrical networks for analyzing DC Networks and theorems
	LO 2	Apply knowledge of various parameters to synthesize filter circuits
	LO 3	Apply knowledge of first order and second order system to solve time domain analysis of RLC circuits
	LO 4	Synthesize RLC circuits using frequency domain analysis
	LO 5	Evaluate various parameters of two port networks
	LO 6	Analyze the stability criteria and synthesize RC, RL & LC circuits

Laboratory Experiments:

Sr. No.	Title of experiment	Module	Reference
1.	Simulation of Nodal Analysis for DC Circuits / To verify Maximum Power Transfer Theorem.	1	
2.	Simulation of DC Circuit for determining Thevenin's Equivalent / To verify Thevenin‟s and Norton‟s Theorem.	1	
3.	To design Low pass, high pass, band pass and band stop filters and evaluate various parameters.	2	
4.	To plot the step response of the first order system and observe the effect of changing time constant in the first order system. (SCILAB / MATLAB)	3	
5.	To plot the step response of the second order system and evaluate time domain specifications. (SCILAB / MATLAB)	3	
6.	Simulation of R-L-C series Circuit.	4	

7.	To find pole zero plot of given transfer functions. (SCILAB / MATLAB)	5	
8.	Determination of Z and Y parameters of two port network	5	
9.	To determine the stability of a given system using Routh‟s criteria. (SCILAB / MATLAB)	6	
10.	Verification of Maximum Power Transfer Theorem (Virtual Laboratory): https://asnm-iitkgp.vlabs.ac.in/exp/maximum-power-transfer-theorem/	1	
11.	To study the behaviour of a series R-L-C circuit (Virtual Laboratory): https://asnm-iitkgp.vlabs.ac.in/exp/rlc-circuit-analysis/index.html	3	
12.	Experimental verification of frequency response of R-L-C series Circuit (Virtual Laboratory): https://asnm-iitkgp.vlabs.ac.in/exp/rlc-series-circuit/index.html	4	
13.	To determine Y, Z, h and ABCD parameters of single and cascaded two-Port networks experimentally and verify their interrelationships (Virtual Laboratory): https://asnm-iitkgp.vlabs.ac.in/exp/two-port-network/	5	

Please Note: The list of experiments is merely meant to serve as a guide and is not limited to, the instructors are free to add innovative and creative lab experiments, and the use of open-source software, simulation platforms, and virtual laboratories is encouraged.

Laboratory Assessment:

Assessment:

Term Work: Term Work shall consist of at least 8 practicals‟ based on the above list and not limited to. Also, Term work Journal must include at least 2 assignments or 2 Virtual Laboratories or 1 Mini Project / 1 Circuit development on the topics from the subject.

Term Work Marks: 25 Marks (Total marks) = 15 Marks (Experiment) + 5 Marks (Assignments / Virtual Laboratory / Mini Project / Circuit development on the topics from the subject) + 5 Marks (Attendance)

Practical/ Oral Exam: An Practical examination will be held based on the above syllabus.

		2	1	--	2	1	-	3
		Examination Scheme						
			IA1	IA2	ESE		Total	
		Theory	20	20	60		100	

Course Objectives:

1. To build a strong foundation in mathematics, provide students with the mathematics fundamentals necessary to formulate, solve and analyse complex engineering problems.
2. To prepare the students to apply reasoning informed by contextual knowledge to engineering practice, and to work as part of teams on multi-disciplinary projects.

Pre-requisite Course Codes	BSC101-Applied Mathematics-I, BSC102-Applied Mathematics-II	
Course Outcomes	After the successful completion, students should be able to	
	CO1	Find eigenvalues and eigenvectors of the matrix, apply Caley Hamilton theorem, find a matrix function, and distinguish derogatory and diagonalizable matrices.
	CO2	Reduce a quadratic form to canonical forms using congruent and orthogonal transformations and characterize it based on rank, index and class value.
	CO3	Identify vector spaces and their bases, calculate the norm and inner products, prove the associated properties, and find an orthogonal and orthonormal basis using the Gram-Schmidt process.
	CO4	Compute probability using probability distribution of discrete and continuous random variables, Binomial, Poisson, and Normal distributions.
	CO5	Apply testing of the hypothesis associated with the Sampling distribution of large samples, small samples and chi-square distribution.
	CO6	Apply the concept of correlation and regression, fitting the curve to estimate the parameters for a given data set.

Module No.	Topics	References	No. of Hours
01	**Linear Algebra (Theory of Matrices):** 1. Eigenvalues and eigenvectors and properties. 1.2 Cayley-Hamilton Theorem (without proof), Functions of Square Matrix. 1.3 Derogatory and non-derogatory matrices. 1.4 Similarity of matrices, diagonalizable and non-diagonalizable matrices.	[1], [3]	4
02	**Linear Algebra (Quadratic Forms):** 2.1 Quadratic forms over the real field, the linear transformation of quadratic form, reduction of quadratic form to canonical forms (diagonal and normal) using a congruent transformation. 2.2 Rank, index and signature of a quadratic form, Sylvester‟s law of inertia, value-class of a quadratic form-Definite, Semi-definite and Indefinite.	[1], [3]	4

	2.3 Reduction of quadratic form to canonical forms (diagonal and normal) using an orthogonal transformation.		
03	**Linear Algebra (Vector Space, Basis and Orthonormal Basis):** 2.1 Vector spaces over real field, subspaces. 2.2 Vectors in n-dimensional vector space, linear combinations, linear dependence and independence set of vectors, basis of a vector space. 2.3 Norm, inner product, distance between two vectors, angle between two vectors, orthogonal vectors, triangular and Cauchy-Schwarz inequality. 2.4 Orthogonal and orthonormal bases, Gram-Schmidt process to construct an orthonormal basis.	[1], [3]	4
04	**Probability:** 4.1 Discrete and continuous random variable with a probability distribution and density function. 4.2 Expectation, variance, moment generating function, raw and central moments, covariance, correlation coefficient and their properties. 4.4 Probability distribution: Binomial, Poisson and Normal distributions.	[2], [4]	5
05	**Probability Distribution and Sampling Theory:** 5.1 Sampling distribution, test of hypothesis, level of significance, critical region, one-tailed and two-tailed test, test of significance of mean and difference between the means of two samples for large samples. 5.2 Degree of freedom, Student‟s t-distribution, test of significance of mean and difference between the means of two samples for small samples. 5.3 Chi-Square Test: Test of goodness of fit, contingency table and test of independence of attributes, Yate‟s correction.	[2], [4]	5
06	**Statistical Techniques:** 6.1 Karl Pearson‟s coefficient of correlation. 6.2 Spearman‟s rank correlation coefficient (with repeated and non-repeated ranks). 6.3 Fitting of first and second degree curves. 6.4 Linear regression.	[2], [4]	4
	Total		**26**

Course Assessment:

Theory:

IA1: 20 Marks written one-hour examination should be conducted when approximately 40% of the syllabus is completed.
IA2: 20 Marks written one-hour examination should be conducted when approximately 80% of the syllabus is completed.

ESE: 60 Marks written two-hour examination should be conducted based on 100% of the syllabus.

End Semester Theory Examination:
1 Question paper will be worth 60 marks.
2 Question paper will have a total of five questions.
3 All questions have equal weightage and carry 20 marks each.
4 Any three questions out of five need to be solved.

Pre-requisite Course Codes	PC 302 Electronic Devices	
Course Outcomes	After the successful completion students should be able to	
	CO1	Evaluate performance of single or multi-stage MOSFET amplifier using frequency response.
	CO2	Analyze various performance parameters of op-amp.
	CO3	Examine the operation of OPAMP for different application
	CO4	Understand the theoretical principles, design concepts, and applications of oscillators and waveform generators in electronic circuits.
	CO5	Study the design and applications of comparators and the 555 timer in waveform generation and timing.
	CO6	Understand the Working of Power Amplifiers.

Module No.	Unit No.	Topics	Reference	Hrs
1		**Frequency Response of MOSFET Amplifiers**		6
	1.1	Low frequency response & analysis, effect of the coupling, bypass & load capacitances on single stage MOSFET amplifier for common source (CS) configuration (mathematical analysis & Numerical examples included)	R1, R3	
	1.2	High frequency response & analysis, effect of parasitic capacitances on MOSFET amplifier, high frequency equivalent circuit of MOSFET, Miller's theorem, effect of Miller's capacitance, unity gain bandwidth (mathematical analysis & numerical examples included).	R1, R3	
	1.3	Introduction to multi-stage amplifiers – need & necessity, different types of couplings (DC, R-C & transformer) with advantages & disadvantages, the MOSFET Cascode amplifier (theoretical description only)	R1, R3	
2		**Differential Amplifier and Op-amp**		9
	2.1	Basic MOSFET differential amplifier, DC characteristics, transfer characteristics, small signal (AC) analysis of only dual input balanced output (DIBO) for differential mode gain & common mode gain, Common mode rejection ratio (CMRR) & input resistance / impedance.	R1	
	2.2	MOSFET differential amplifier with an active load (theoretical description & only mathematical analysis (no numerical examples).	R1	
	2.3	The ideal operational amplifier (op-amp), internal block diagram of op-amp, characteristics of op-amp, ideal & practical op-amp parameters / specifications (no detailed description or any Analysis), mathematical model of op-amp, IC 741 op-amp with pin diagram & description.	R1, R7	

3		**Applications of Operational Amplifier**		8
	3.1	Open loop & closed loop configurations (theoretical description only), the concept of virtual ground & virtual short.	R1, R2	
	3.2	Types of negative feedback – voltage series, voltage shunt, current series & current shunt (theoretical description only), the op-amp inverting amplifier & op-amp non-inverting amplifier (mathematical analysis for derivation of output voltage only, numerical examples & designing)	R2, R3	
	3.3	Adder, summing amplifier, averaging circuit, subtractor, integrator (ideal), differentiator (ideal), difference amplifier, current amplifier & 3 op-amp instrumentation amplifier (only mathematical analysis for derivation of output voltage with numerical examples & designing included)	R2, R7	
	3.4	Current to voltage converters (I to V) & voltage to current converters (V to I) – floating load &grounded load (mathematical analysis only – no numerical).	R2, R7	
4		**Oscillators and Waveform Generator**		5
	4.1	Oscillators: RC phase shift oscillator, Wein bridge oscillator & the crystal oscillator (theoretical description only–no mathematical analysis), numerical example & design problem on RC phase shift oscillator & Wien bridge oscillator	R2, R4	
	4.2	Waveform Generators: square wave generator & triangular wave generator (only theoretical description – no mathematical analysis or designing examples).	R2, R4, R7	
5		**Application based Integrated Circuits**		6
	5.1	Comparators: Inverting comparator, non-inverting comparator, zero crossing detector (ZCD) & Schmitt Trigger (numerical examples & designing problem on the inverting Schmitt Trigger for both symmetrical& non-symmetrical configurations), window detector / comparator (theoretical description only).	R2, R7	
	5.2	C 555 timer internal block diagram & pin configuration, operation in Astable&MonostableMultivibrator with mathematical analysis & numerical examples, design problems on Astable&MonostableMultivibrator, applications in Astable&Monostable configuration	R2, R7	
6		**Power Amplifiers**		5
	6.1	Power MoSFETs, Heat Sinks, Class A, Class B, Class AB, Class C, Operation and power efficiency	R2, R4, R7	
	6.2	Class AB output stage with diode biasing, Vbe Multiplier biasing, Input Buffer Transistors, Darlington Configurati	R2, R4, R7	
Total				**39**

Course Assessment:

Theory:

IA1: One hours 20 Marks written examination for one hour
IA2: One hours 20 Marks written examination for one hour
ESE: Two hours 60 Marks written examination for two hours

Pre-requisite Course Codes: PC 303 Data Structure and Algorithms

Course Outcomes	After the successful completion students should be able to	
	CO1	Understand the notion of mathematical thinking, mathematical proofs and to apply them in problem solving.
	CO2	Reason Logically.
	CO3	Perform operations with Sets, Relations, Functions, Graphs and their applications.
	CO4	Design Deterministic Finite Automata (DFA) and Non-deterministic Finite Automata (NFA) and Pushdown Automata with understanding of power and limitations.
	CO5	Design Context Free Grammar and perform the operations like simplification and normal forms.
	CO6	Apply Discrete Structures and Automata Theory concepts into solving real world computing problems in the domain of Formal Specification, Verification, Artificial Intelligence etc.

Module No.	Unit No.	Topics	Reference	Hrs.
1	**Set Theory and Logic**		T1,2 R1,2,5	7
	1.1	Set Theory: Fundamentals - Sets and Subsets, Venn Diagrams, Operations on sets, Laws of Set Theory, Power Set, Principle of Inclusion and Exclusion, Mathematical Induction.		
	1.2	Propositions and Logical operations, Truth tables, Equivalence, Implications		
	1.3	Laws of Logic, Normal Forms, Inference, Predicates and Quantifiers		
2	**Relations and Functions**		T 1,2 R 1,2, ,4,6	9
	2.1	Relations- Definition, Properties of Relations, Types of binary relations (Equivalence and partial ordered relations),		
	2.2	Closures, Poset, Hasse diagram and Lattice Functions-Definition, Types of Functions (Injective, Surjective and Bijective)		
	2.3	Identity and Inverse Functions, Pigeonhole Principle, Extended Pigeonhole Principle		
3	**Graph Theory**		T-3,4 R 6,7,8,9	5
	3.1	Graphs and their basic properties - degree, path, cycle, subgraphs, Types of graphs.		

	3.2	Definitions, Paths and circuits: Eulerian and Hamiltonian, Planner Graph.		
	3.3	Isomorphism of graphs, Dijkstra Shortest Path Algorithm, Trees, Types of Trees		
4	**Finite Automata**		T-3,4 R 6,7,8,10	6
	4.1	Introduction of Automata and its applications		
	4.2	Deterministic Finite Automata (DFA) and Nondeterministic Finite Automata (NFA): Definitions, transition diagrams and Language recognizers, NFA to DFA Conversion.		
	4.3	Eliminating epsilon-transitions from NFA. FSM with output: Moore and Mealy machines.		
5	**Regular Expression (RE) and Regular Grammar (RG)**		T-3,4 R 6,7,8,10	6
	5.1	Regular Grammar and Regular Expression (RE): Definition, Equivalence and Conversion from RE to RG and RG to RE.		
	5.2	Equivalence of RE and FA, Converting RE to FA and FA to RE. Applications of RE and RG.		
6	**Context Free Grammar (CFG) and Push Down Automata (PDA)**		T-3,4 R 6,7,8,10	6
	6.1	Grammars: Chomsky hierarchy, CFG-Definition, Sentential forms, Leftmost and Rightmost derivations.		
	6.2	Context Free languages (CFL): Parsing and Ambiguity. CFLs: Simplification and Applications.		
	6.3	Normal Forms: Chomsky Normal Form (CNF)		
	6.4	PDA- Definition, Transitions (Diagrams, Functions and Tables), Design of PDA with Graphical Notation and Instantaneous Descriptions.

		--	--	2	--	--	1	1
		Examination Scheme						
		Term work		Orals			Total	
		25		25			75	

Pre-requisite Course Codes	Electronic Devices Laboratory	
Laboratory Objectives	1.	To practically analyze& compute performance parameters of various electronic circuits
	2	To familiarize with principles of designing of practical electronic circuits as per given specifications
	3.	To develop overall approach for students from selection of integrated circuit, specification, functionality and applications
Laboratory Outcomes	After the successful completion students should be able to	
	LO 1	Experimentally evaluate performance of amplifiers through frequency response
	LO 2	Analyze differential amplifiers for various performance parameters
	LO 3	Implement practically various applications and circuits based on operational amplifiers.

Laboratory Experiments:

Sr. No.	Title of experiment	Module	Reference
1.	To implement single stage MOSFET CS amplifier and study its frequency response	1	R1, R3
2.	To implement CS-CG MOSFET Cascode amplifier and study its frequency response.	1	R1, R3
3.	To determine input and output impedance of CS amplifier with and without feedback.	1	R1, R3
4.	To study Op-amp as Differential amplifier.	2	R1, R7
5.	To measure parameters of Op-amp.	2	R1, R7
6.	To study Inverting and Non-inverting configuration of Op-amp.	3	R7
7.	To study and calculate frequency of oscillations of Wien bridge oscillator	4	R2, R4
8.	To study and calculate frequency of oscillations of RC Phase shift oscillator	4	R2, R4

9.	To study voltage gain of three Op-amp instrumentation amplifier	5	R2, R7
10.	To study the operational amplifier as summing amplifier.	5	R2, R7
11.	To determine upper and lower threshold voltage in Schmitt trigger using IC 741.	6	R2, R4, R7
12.	To study and implement Astable multi-vibrator using 555 timer IC.	6	R2, R7
13.	To study Op-amp as comparator and zero crossing detector	6	R2, R4, R7

Laboratory Assessment:

Assessment:
Term Work: Term Work shall consist of at least 10 to 12 practical‟s based on the above list. Also, Termwork Journal must include at least 2 assignments.
Term Work Marks: 25 Marks (Total marks) = 15 Marks (Experiment) + 5 Marks (Assignments) + 5 Marks(Attendance)
Practical/ Oral Exam: An Oral examination will be held based on the above syllabus.

Pre-requisite Course Codes: **Python** programming		
Laboratory Objectives	1.	To familiarize learners with Python's basic syntax, variables, data types, operators, and input/output functions.
	2	To introduce learners with file handling, exception management, and Python packaging.
	3.	To reinforce the understanding and application of GUI.
	4	To explore advanced libraries such as Numpy, Pandas, Matplotlib, Seaborn, Scipy.
	5	To explore data visualization tools.
	6	To introduce and demonstrate the use of DJANGO for web applications.
Laboratory Outcomes	After the successful completion students should be able to	
	LO 1	Identify the fundamental Python programming to design object- oriented programs with Python classes
	LO 2	Demonstrate the file handling operations like reading, writing to create the programs
	LO 3	Express proficiency in the handling Python libraries to Design GUI Applications
	LO 4	Design interactive visualizations that allow users to explore data creatively
	LO 5	Develop interactive projects with the help of Machine learning libraries to develop different applications
	LO 6	Create the web development applications with the help of DJANGO.

DETAILED SYLLABUS:

Module No. 1	Unit No.	Introduction to Creative Coding with Python	Reference	Hrs.
1		**Python Programming Basics**	R1	**04**
	1.1	Basic Syntax and Data Types - Variables and data types, Operators, Input and output, Data Structures- list, tuple, set and dictionary Understanding the Syntax Transition: From C to Python		
	1.2	Conditional Statements: if, else, elif , Loops: for and while loop Functions- Defining functions, Parameters and return values, Scope and lifetime of variables.		
2		**Functions, File I/O Handling and Classes**	R1, R2	**04**
	2.1	File Input/Output: Files I/O operations, Read / Write Operations, File Opening Modes, with keywords, Moving within a file, Manipulating files and directories, OS and SYS modules		
	2.2	Classes and Objects, Public and Private Members, Class Declaration and Object Creation, Object Initialization, Class Variables and methods, Accessing Object and Class Attributes. Intricacies of Classes and Objects, Inheritance, Constructor in Inheritance, Exception Handling, Link list, Stack, Queues.		
3		**Graphical User Interface and Image processing**	R3	**06**
	3.1	Graphical User Interface using Tkinter Library module, creating simple GUI; Buttons, Labels, entry fields, widget attributes.		
	3.2	Database: Sqilite database connection, Create, append, update, delete records from database using GUI.		
	3.3	Basic Image Processing using OpenCV library, simple image manipulation using image module.		
4		**Numpy, Pandas, Matplotlib, Seaborn, Scipy and Data Science**	R3, R4	**08**
	4.1	Introduction to Numpy, Creating and Printing Ndarray, Class and Attributes of Ndarray, Basic operation, Copy and view, Mathematical Functions of Numpy		
	4.2	Introduction to Pandas, Understanding Dataframe, View and Select Data, Missing Values, Data Operations, File read and write operation.		
	4.3	Introduction to Matplotlib library, Line properties, Plots and subplots, Types of Plots, Introduction to Seaborn		
	4.4	Introduction to Scipy, Scipy Sub packages – Integration and Optimization, Eigen values and Eigen Vectors, Statistic, Weave and IO.		
	4.5	Dataframes, Data analysis commands, Data visualization: Line chart, Bar Diagram, Histogram, Pie chart		
5		**Web Development**	R3, R4, R5	**04**
	5.1	Introduction to web development application, Web Architecture and applications.		
	5.2	Introduction to DJANGO Framework: History of DJANGO, DJANGO-Design philosophies, DJANGO features and Environment set up.		
			Total	**26**

Laboratory Experiments:

The following experiments serve as samples to illustrate the application of concepts covered in each unit. Instructors are encouraged to modify and adapt these experiments to meet the specific needs of the course and the learning objectives. It is essential to ensure that the fundamental concepts and skills outlined in each unit are adequately covered, even with modifications

Sr. No.	Title of experiment	Module	Reference
1.	1. Write python programs to understand expressions, variables, quotes, basic math operations, list, tuples, dictionaries, arrays etc. 2. Write Python program to implement byte array, range, set and different STRING Functions (len, count, lower, sorted etc) 3. Write a Python program to implement control structures. 4. Assume a suitable value for distance between two cities (in km). 5. Write a program to convert and print this distance in meters, feet, inches and centimeter.	Module 1	R1
2.	1. Write python program to understand different File handling operations 2. Create 3 lists – a list of names, a list of ages and a list of salaries. 3. Generate and print a list of tuples containing name, age and salary from the 3 lists. From this list generate 3 tuples – one containing all names, another containing all ages and third containing all salaries. 4. Write Python program to implement classes, object, Static method and inner class 5. If any integer is given as in input through the keyboard, write a program to find whether it is odd or even number. 6. Write a program that prints square root and cube root of numbers from 1 to 10, up to 4 decimal places. Ensure that the output is displayed in separate lines, with number center-justified and square and cube roots right-justified. 7. Write a program to find the factorial value of any number entered through the keyboard.	Module 2	R2
3.	1. Write Python program to create, append, update, delete records from database using GUI.	Module 3	R3

	2. Write Python program to obtain histogram of any image 3. Write Python Program to split color image in R,G,B and obtain a. individual histograms. 4. Write Python program for histogram equalization 5. Write Python Program for edge detection 6. Write Python Program for image segmentation 7. Write Python program to implement GUI Canvas application using Tkinter 8. Write Python program to implement GUI Frame application using Tkinter		
4.	1. Write Python program to study define, edit arrays and perform arithmetic operations. 2. Write python program to study selection, indexing, merging, joining, concatenation in data frames 3. Evaluate the dataset containing the GDPs of different countries to: • Find and print the name of the country with the highest GDP • Find and print the name of the country with the lowest GDP • Print text and input values iteratively • Print the entire list of the countries with their GDPs • Print the highest GDP value, lowest GDP value, mean GDP, value, standardized GDP value, and the sum of all the GDPs 4. Analyze the Federal Aviation Authority (FAA) dataset using Pandas to do the following: • View: aircraft make name, state name, aircraft model name, text information, flight phase, event description type, fatal flag • Clean the dataset and replace the fatal flag NaN with "No". • Find the aircraft types and their occurrences in the dataset • Remove all the observations where aircraft names are not available • Display the observations where fatal flag is "Yes" 5. Analyze the "auto mpg data" and draw a pair plot using seaborn library for mpg, weight, and origin. (a) Origin: This dataset was taken from the StatLib library maintained at Carnegie Mellon University. • Number of Instances: 398 • Number of Attributes: 9 including the class attribute • Attribute Information: • mpg: continuous • cylinders: multi-valued discrete • displacement: continuous • horsepower: continuous • weight: continuous • acceleration: continuous • model year: multi-valued discrete • origin: multi-valued discrete • car name: string (unique for each instance) 6. Write python program to use SciPy to solve a linear algebra problem.	Module 4	R4,5,6
5.	1. Write python program to study linear regression 2. Write python program to study multiple linear regression	Module 5	R4,5,6

	3. Write python program to study logistic regression 4. Write python program to study Support Vector Machine 5. Write python program to study decision tree algorithm 6. Write python program to study two-way communication between client and server.		

Laboratory Assessment:

Assessment:

Term Work: Term Work shall consist of at least 10 to 12 practicals‟ based on the above list. Also, Term work Journal must include at least 2 assignments.

Term Work Marks: 25 Marks (Total marks) = 15 Marks (Experiment) + 5 Marks (Assignments) + 5 Marks (Attendance)

Practical/ Oral Exam: An Oral examination will be held based on the above syllabus.

Pre-requisite Course Codes		
Course Outcomes	After the successful completion students should be able to	
	CO1	Identify and address community needs and challenges which help learners to develop problem-solving skills and creativity in finding innovative solutions.
	CO2	Enhance their cultural competence and ability to work effectively in multicultural settings
	CO3	Critically think on complex issues considering multiple view points
	CO4	Demonstrate collaboration, team work, civic engagement, empathy, and compassion while engaging directly with community
	CO5	Develop a lifelong commitment to social justice and making a positive impact in the world

This course requires students to participate in field-based learning/projects generally under the supervision of faculty. The curricular component of „community engagement and service" involve activities that would expose students to the socio-economic issues in society so that the theoretical learnings can be supplemented by actual life experiences to generate solutions to real-life problems. At the end of the course, it is expected that students will have valuable learnings in terms of enhanced communication skills, increased cultural competence, improved critical thinking, leadership skills, collaboration skills, empathy & compassion, civic engagement, problem-solving skills, self-reflection & personal growth, and long-term commitment to social justice. It is expected that 26-30 hours of contact time per credit in a semester (52 to 60 hours in a semester for 2 credits) along with 13-15 hours of activities such as preparation for community engagement and service, preparation of reports, etc., and independent reading and study.

Other Guidelines to students for successful Community Engagement:

Community engagement is the process of working collaboratively with and through groups of people affiliated by geographic proximity, special interest, or similar situations to address issues affecting the well-being of those people It is a powerful vehicle for bringing about environmental and behavioural changes that will improve the health of the community and its members. It often involves partnerships and coalitions that help mobilize resources and influence systems, change relationships among partners, and serve as catalysts for changing policies, programs, and practices. Community engagement project is different as compared to traditional consultation. It is a regular engagement of community for achieving an identified goal or vision. It recognizes the role of community engagement in its broadest sense in the development of local democracy, while noting that the focus of the report is on the practice of community engagement as it relates to local authority activity. Communication, diplomacy, patience, and flexibility are essential to engage with a community.

For successful engagement conditions include: Shared and defined purpose. Willingness to collaborate. Commitment to contributing. Participation of the right people. Open and credible process. Involvement of a champion with credibility and clout. Ensure that the engagement process is complex but manageable. Initially the team will: Discuss and define the initiative and its potential impact. Set the purpose and goals for community engagement. Define the community. Know and respect the community‟s characteristics. Develop a relationship with the community, build trust, work with formal and informal leadership, find the community gatekeeper, identify the project champion, meet with the local organizations, and learn the assets and challenges for that community keeping in mind the 17 sustainable development goals. Find the common interests. The following four phases provide broad outline for the community engagement process:

Phase-I: **Outreach**

Go to the community instead of having the community come to you. Invite the stakeholders to a conversation. Create a constructive environment for dialogue allowing time to get to know the participants remembering that the community‟s time is valuable and must be respected. Identify the person or the organization that has convened the group and will provide initial leadership and organizational management. Outline the purpose and process for the conversation. Use a facilitator when appropriate. Define the issue and why it is important. Outline what is broken and focus on what is working. Is the issue a people problem or a situation problem? Can the problem be solved with technical expertise or will it require something else? Determine the interest and merit in hosting future discussions.

Phase-II: **Gather Facts, Brainstorm and Select**

Create an environment for discussion where people are comfortable asking questions, expressing doubts, and brainstorming new ideas. Gather the facts related to the issue and its impact. Use a SWOT, appreciative inquire, asset mapping, and other tools during the factfinding stage. Clarify the issue‟s alignment with the community‟s values and ethics. Establish the common ground on which conversations will be based. Brainstorm and gather alternative solutions. Ask the “what if” questions. Spend time discussing the options and the potential impact. Allow the process to equip the participants to see the change, feel the change, and then be prepared to change. Select the best practice/solution. If required use decision-making tools to reduce the number of options.

Phase-III: **Plan and Review**

Write the implementation action plan. Include the evaluation procedure that will answer the question “What will it look like when the change has happened?”. Discuss the proposal with the appropriate stakeholders searching for insight and response. Use the feedback to assess and revise the plan. Stay focused on the solution.

Phase-IV: **Implement and Evaluate**

Implement the plan. Remember, groups want a rapid success. Identify an action that will provide a “meaningful win” within the “immediate reach.” Evaluate the impact. Report the status to the community and gather feedback. Revise the plan and evaluate again. Keep the participants informed through discussion agendas, written summaries of previous discussions, goals/assignments for the next discussion, and progress reports providing accountability for delivering what was promised.

Vertical – 5

Course Code	Course Name	Teaching Scheme (Contact Hours)			Credits Assigned			
		Theory	Pract.	Tut.	Theory	Pract.	Tut.	Total
2993511	Entrepreneurship Development	2*	2	-	-	-	-	2

Course Code	Course Name	Examination Scheme						
		Theory Marks				Term Work	Practical/ Oral	Total

2993511	Entrepreneurship Development	--	--	--	--	50	--	50

Note: * Two hours of practical class to be conducted for full class as demo/discussion/theory.

Lab Objectives:

1. To introduce students to entrepreneurship concepts and startup development.
2. To develop business idea generation, validation, and business model preparation.
3. To provide hands-on experience in market research, financial planning, and business pitching.
4. To enhance problem-solving and decision-making skills in entrepreneurial ventures.
5. To familiarize students with government schemes and support systems for entrepreneurs.
6. To develop communication and presentation skills required for business pitching.

Lab Outcomes:

Upon successful completion of this course, students will be able to:

1. Understand the fundamental concepts of entrepreneurship and business models.
2. Conduct market research and develop business plans.
3. Utilize financial planning and cost analysis for startups.
4. Apply entrepreneurial skills to identify and solve business challenges.
5. Develop prototypes using open-source software for business operations.
6. Pitch business ideas effectively with structured presentations.

DETAILED SYLLABUS

Sr. No.	Module	Detailed Content	Hours	LO Mapping
0	**Prerequisite**	Fundamentals of communication and leadership skills.	01	--
I	**Introduction to Entrepreneurship**	Definition, Characteristics, and Types of Entrepreneurs. Entrepreneurial Motivation and Traits. Start-up Ecosystem in India. Challenges in Entrepreneurship	**02**	**LO1**
II	**Business Idea Generation & Validation**	Ideation Techniques: Design Thinking, Brainstorming, Mind Mapping. Business Model Canvas (BMC). Market Research & Customer Validation. Minimum Viable Product (MVP) Concept.	**04**	**LO2**

III	**Business Planning & Strategy**	Writing a Business Plan. SWOT Analysis and Competitive Analysis. Financial Planning and Budgeting. Risk Assessment and Management	**04**	**LO3**
IV	**Funding and Legal Framework**	Sources of Funding: Bootstrapping, Angel Investors, Venture Capital Government Schemes & Start-up India Initiatives. Business Registration & Legal Formalities. Intellectual Property Rights (IPR) & Patents	**05**	**LO4**

		Test 1	Test 2	Avg.					
2993512	Environmental Science	20	20	40	60	2	--	--	100

Rationale:

Most of the engineering branches are offspring of applied sciences, and their practices have a significant impact on the environment. Understanding environmental studies is essential for engineers to develop sustainable solutions, minimize ecological footprints, and promote responsible resource management. This course equips students with the knowledge of ecosystems, biodiversity, pollution control, and environmental laws, enabling them to integrate sustainability into engineering practices.

Course Objectives:

1. To understand the scope, importance, and role of environmental studies in public awareness and health.
2. To study different natural resources, their issues, and sustainable conservation.
3. To understand ecosystem types, structures, and functions.
4. To explore biodiversity, its importance, threats, and conservation.
5. To learn about pollution types, causes, effects, and control measures.
6. To understand environmental challenges, sustainability, and ethics.

Course Outcomes:

1. Explain the significance of environmental studies and the role of IT in environment and health.
2. Describe resource types, associated problems, and conservation methods.
3. Classify ecosystems and explain their role in ecological balance
4. Analyze biodiversity levels and conservation strategies, especially in India.
5. Explain pollution impacts and suggest preventive measures.
6. Discuss environmental issues and propose sustainable solutions.

DETAILED SYLLABUS:

Unit Name	Topic Name	Topic Description	No of Lecture

Module-I	The Multidisciplinary Nature of Environmental Studies	Definition, scope and importance. Need for public awareness, Role of information technology in environment and human health. Human population and the environment: Population growth, variation among nations. Population Explosion-family welfare program. Environment and human health Women and child welfare	2
Module-II	Natural Resources	Renewable and non-renewable resources. Natural resources & associated problems: a) Forest resources: b) Water resources: Natural resources & associated problems c) Mineral resources: d) Food resources: e) Energy resources: Role of an individual in conservation of natural resources: f) Equitable use of resources for sustainable lifestyles.	2
Module-III	Ecosystems	Concepts of an ecosystem. Introduction, types, characteristic features, structure and function of the following ecosystem: a. Forest ecosystem b. Grassland ecosystem c. Desert ecosystem d. Aquatic ecosystem (ponds, streams, lakes, rivers, oceans, estuaries). Case study on various ecosystems in India.	2
Module-IV	Biodiversity and its Conservation	Introduction-Definition: genetic species and ecosystem diversity. Bio-geographical classification of India Value of biodiversity: Consumptive use, productive use, social, ethical, aesthetic and option values, Bio-diversity at global, national, local levels India as a mega diversity nation Case study on Bio diversity in India.	3
Module-V	Environmental Pollution Definition	Causes, effects and control measures of: a) Air pollution b) Water pollution c) Soil pollution. Solid waste management: Causes, effect and control measures of urban and industrial wastes. Role of an individual in prevention of pollution, Case study on Pollution Disaster management: floods, earthquake, cyclone and landslides. Carbon Credits for pollution prevention	3
Module-VI	Social Issues and Environment	From unsustainable to sustainable development Urban problems related to energy, Water conservation, rain water harvesting, watershed management. Environmental ethics: issues and possible solution. Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies. Consumerism and waste products. Environment protection act. Public awareness Case study on Environmental Ethics	3

Assessment:
Internal Assessment (IA) for 20 marks:

- IA will consist of Two Compulsory Internal Assessment Tests. Approximately 40% to 50% of syllabus content must be covered in First IA Test and remaining 40% to 50% of syllabus content must be covered in Second IA Test

➢ **Question paper format**

- Question Paper will comprise of a total of **six questions each carrying 20 marksQ.1** will be **compulsory** and should **cover maximum contents of the syllabus**
- **Remaining questions** will be **mixed in nature** (part (a) and part (b) of each question must be from different modules. For example, if Q.2 has part (a) from Module 3 then part (b) must be from any other Module randomly selected from all the modules)
- A total of **Three questions** needs to be answered

Course Code	Course Name	Teaching Scheme (Contact Hours)			Credits Assigned			
		Theory	Pract.	Tut.	Theory	Pract.	Tut.	Total
2994511	**Business Model Development**	2*+2	-	-	2	-	-	2

Course Code	Course Name	Examination Scheme						
		Theory Marks				Term Work	Practical/ Oral	Total
		Internal assessment			End Sem. Exam			
		Test	Test 2	Avg. of 2 Tests				
2994511	**Business Model Development**	--	--	--	--	25	25	50

Lab Objectives:

1. To introduce a learner to the entrepreneurship and its role in economic development
2. To familiarize a learner with the start-up ecosystem and government initiatives in India
3. To explain the process of starting a business
4. To familiarize a learner to the building blocks of a business
5. To teach a learner to plan their own business with the help of Business Model Canvas

Lab Outcomes:

The learner will be able to:

1. discuss the role of entrepreneurship in the economic development of a nation and describe the process of starting a business
2. describe start-up ecosystems in Indian and global context
3. identify different types of business models
4. identify customer segments, channels and customer relationship components for a particular business
5. identify key activities, key partners and key resources for a particular business
6. develop a financial plan for a business with the help of cost structure and revenue model
7. prepare a complete Business Model Canvas for their own business / busine

DETAILED SYLLABUS:

Sr. No.	Module	Detailed Content	Hours	LO Mapping
0	Prerequisite	Basic Design Thinking principles	1	L2
I	1	Introduction to entrepreneurship: Definition, the role of entrepreneurship in the economic development, the entrepreneurial process, Women entrepreneurs, Corporate entrepreneurship, Entrepreneurial mindset **Self-learning Topics:** Case studies: Henry Ford https://www.thehenryford.org/docs/default-source/default-document-library/default-document-library/henryfordandinnovation.pdf?sfvrsn=0 The Tatas: How a Family Built a Business and a Nation by Girish Kuber, April 2019, Harper Business	**4**	**L2, L3**

II	2	Entrepreneurship Development: Types of business ownerships: Proprietorship, Public and Private Companies, Co-operative businesses, Micro, Small and Medium Enterprises (MSME): Definition and role of MSMEs in economic development	5	L2, L3
III	3	**Start-up financing:** Cost and revenue models, Sources of start-up fundings: Angel investors, Venture capitalists, Crowd funding, Government schemes for start-up funding **Self-learning Topics:** Successful business pitching	4	L2, L3
IV	4	**Intellectual Property Rights (IPR):** Types of IPR: Patents, trademarks and copyrights, Patent search and analysis, Strategies for IPR protection, Ethics in technology and innovation	**4**	**L2,L3**
V	**5**	**Business Model Development:** Types of business models, Value proposition, Customer segments, Customer relationships, Channels, Key partners, Key activities, Key resources, Prototyping and MVP **Self-learning Topics:** The Art of the Start 2.0: The Time-Tested, Battle-Hardened Guide for Anyone Starting Anything by Guy Kawasaki	**4**	**L5, L6**
VI	**6**	**Digital Business Management:** Digital Business models (Subscription, Freemium *etc*), Digital marketing: Search Engine Optimization (SEO), Search Engine Marketing (SEM), Social media and influencer marketing, Disruption and innovation in digital business **Self-learning Topics:** Case study: Airbnb https://www.prismetric.com/airbnb-business-m		**L2, L3**

List of Experiments.

The lab activities are to be conducted in a group. One group can be formed with 4-5 students. A group has to develop a Business Model Canvas and a digital prototype (Web App/ mobile app). Weekly activities are to be conducted as follows:

Sr No	Lab activities	Hrs
01	Problem identification (Pain points, Market survey)	2
02	Design a digital solution for the problem (Ideation techniques)	2
03	Preparing a business model canvas: Value proposition, Key partners, Key resources, Key activities	2
04	Preparing a business model canvas: Customer segment, Customer relationships and channels	2
05	Preparing a business model canvas: Cost and Revenue structure	2
06	Prototype development: Low fidelity	2
07	Prototype development: Customer feedback	2
08	Prototype development: High fidelity	2
09	Presentation of high-fidelity prototype	2
10		2

Sr No	List of Assignments / Tutorials	Hrs
01	Presentation on case study of a failed business model	2
02	Presentation on case study of a woman entrepreneur	2

Assessment:

Term Work: Term Work shall consist of 10 lab activities based on the above list. Also, Term work journal must include any 2 assignments from the above list.

Term Work Marks: 25 Marks (Total marks) = 15 Marks (Experiment) + 5 Marks (Assignments) + 5 Marks (Attendance)

Oral Exam: An oral exam will be held based on the above syllabus.

Course Code	Course Name	Teaching Scheme (Contact Hours)			Credits Assigned			
		Theory	Pract.	Tut.	Theory	Pract.	Tut.	Total
2994512	Design Thinking	-	2*+2 Hours Batch-Wise	-	-	2	-	2

Course Code	Course Name	Examination Scheme

		Internal assessment			End Sem.			
		Test1	Test 2	Avg. of 2 Tests	Exam			
2994512	Design Thinking	--	--	--	--	25	25	50

Lab Objectives:

1. To introduce a learner to the principles of Design Thinking
2. To familiarize a learner with the process (stages) of Design Thinking
3. To expose a learner to various case studies of Design Thinking

Lab Outcomes:

Students will be able to …

1. compare traditional approach to problem solving with the Design Thinking approach and discuss the principles of Design Thinking
2. define a user persona using empathy techniques
3. frame a problem statement using various Design Thinking tools
4. use ideation techniques to generate a pool of solutions for a problem
5. create prototypes using different techniques
6. test the prototypes and gather feedback for refining the prototype

DETAILED SYLLABUS:

Sr. No.	Module	Detailed Content	Hours	LO Mapping
0	Prerequisite	No perquisites	-	-

I	1	**Introduction to Design Thinking:** Definition, Comparison of Design Thinking and traditional problem-solving approach, Need for Design Thinking approach, Key tenets of Design Thinking, 5 stages of Design Thinking (Empathize, Define, Ideate, Prototype, Test) **Self-learning Topics:** Design thinking case studies from various domains https://www.design-thinking-association.org/explore-design-thinking-topics/external-links/design-thinking-case-study-index	5	**L1, L2**

II	**2**	**Empathy:** Foundation of empathy, Purpose of empathy, Observation for empathy, User observation technique, Creation of empathy map **Self-learning Topics:** Creation of empathy maps https://www.interaction-design.org/literature/topics/empathy-mapping	5	**L2, L3**
III	3	**Define:** Significance of defining a problem, Rules of prioritizing problem solving, Conditions for robust problem framing, Problem statement and POV **Self-learning Topics:** Creating a Persona – A step-by-step guide with tips and examples https://uxpressia.com/blog/how-to-create-persona-guide-examples	**5**	**L2, L3**
IV	4	**Ideate:** What is ideation? Need for ideation, Ideation techniques, Guidelines for ideation: Multi-disciplinary approach, Imitating with grace, Breaking patterns, Challenging assumptions, Looking across value chain, Looking beyond recommendation, Techniques for ideation: Brainstorming, Mind mapping **Self-learning Topics:** How To Run an Effective Ideation Workshop: A Step-By-Step Guide https://uxplanet.org/how-to-run-an-effective-ideation-workshop-a-step-by-step-guide-d520e41b1b96	**5**	**L3, L7**

V	5	**Prototype:** Low and high-fidelity prototypes, Paper prototype, Story board prototype, Scenario prototype	**3**	**L6**
VI	6	**Test:** 5 guidelines of conducting test, The end goals of test: Desirability, Feasibility and Viability, Usability testing	**3**	**L4, L5**

Textbooks:

3.	Usability Testing https://www.interaction-design.org/literature/topics/usability-testing

List of Experiments.

The experiments are to be performed in groups. A practical batch may be divided into groups of 4-5 students.

Sr No	List of Experiments	Hrs
01	Customer Journey Mapping: Visualize the steps users take to interact with a product or service. Map out the customer journey from discovering a product to making a purchase and using the product. Identify pain points and opportunities for improvement.	2
02	Stakeholder mapping: Identify all relevant stakeholders in a project. Create a stakeholder map, categorizing stakeholders based on their influence and interest. Include management of relationships with key stakeholders.	2
03	"How Might We" Problem Framing: Transform user insights into actionable problem statements. After empathizing with users, turn challenges into "How Might We" statements that define the problem without prescribing a solution.	2
04	Brainstorming Session: Generate a pool of ideas in a creative, non-judgmental environment. Using ideation techniques like mind mapping and brainwriting, students brainstorm as many solutions as possible to their "How Might We" problem statements.	2
05	Affinity Diagramming: Organize group ideas to find patterns and insights. After brainstorming, students will categorize their ideas into themes by placing sticky notes on a wall and moving them into groups based on similarities.	2
06	Rapid Prototyping: Create quick, low-fidelity versions of solutions. Use materials like paper, cardboard, and markers to build a prototype of their solution within 30 minutes. The focus is on speed and functionality, not aesthetics.	2
07	Wireframing: Create a visual guide for digital interfaces for mobile app / web app for the problems identified in earlier lab sessions. Students will sketch wireframes of the user interface for their product or service. Use tools like Balsamiq or paper and pen for low-fidelity wireframes.	2
08	Role-Playing: Walk through a prototype from the user‟s perspective. Students act as both users and designers, role-playing scenarios where they interact with their prototype (Developed in earlier lab sessions). Gather feedback from participants on how to improve the experience.	2
09	Usability Testing: Evaluation of the effectiveness and user-friendliness of a prototype (developed in earlier lab sessions). Students will have peers or target users test their prototypes, observe how they interact with it, and collect feedback on any issues or improvements needed.	2
10	Feedback Loop and Iteration: Refine solutions based on user feedback. After usability testing, students will refine their prototypes. Document changes made based on feedback and discuss how continuous iteration improves the design.	2

Sr No	List of Assignments (Any two)	Hrs
01	Create an empathy map for a target user group. Break them into four sections: *Says, Thinks, Feels, and Does*. Interview users or research their experiences to fill in the map.	3
02	Based on research, students will create user personas including demographic details, motivations, pain points, and goals. Each group will present their persona to the class.	3
03	Consider 3 examples of real-life products which have good design and bad design. Write down reasons why do you think they are good or bad designs. May take user survey to support your work.	3
04	Study any open-source design thinking tool and write a brief report about it.	3

Assessment:

Term Work: Term Work shall consist of 10 lab activities based on the above list. Also, Term work journal must include any 2 assignments from the above list.

Term Work Marks: 25 Marks (Total marks) = 15 Marks (Experiment) + 5 Marks (Assignments) + 5 Marks (Attendance)

Oral Exam: An oral exam will be held based on the above syllabus.

Vertical – 6

(Open Electives and MDM Courses)

Course Code	Course Name	Teaching Scheme (Hrs/week)			Credits Assigned			
		L	T	P	L	T	P	Total
OE301	**Introduction to IoT and Applications**	2	--	--	2	--	--	2
		Examination Scheme						
			IA1	**IA2**	**ESE**		**Total**	
		Theory	20	20	60		100	

Course Objectives:

1. Define the Internet of Things (IoT) and its key characteristics.
2. Explore the conceptual framework and architectural views of IoT systems.
3. Identify the technologies and components that enable IoT implementations.
4. Understand communication protocols and design principles for connected devices.
5. Examine various sensor and actuator technologies used in IoT applications.
6. Apply IoT design methodologies through case studies in smart living and connected commerce.

Course Outcomes	After the successful completion students should be able to	
	CO1	Articulate the fundamental concepts and significance of IoT.
	CO2	Analyze and differentiate between various IoT technologies and protocols.
	CO3	Design and implement basic IoT applications using appropriate sensors and actuators.
	CO4	Evaluate the effectiveness of IoT solutions in real-world scenarios.
	CO5	Conduct case studies to assess the impact of IoT on smart living and commerce.
	CO6	Collaborate on innovative IoT projects, demonstrating practical application of learned concepts.

Module No.	Unit No.	Topics	Reference	Hrs.
1	**Introduction to Internet of Things**		1,2	6
	1.1	Definition and characteristics, IoT conceptual framework		
	1.2	IoT architectural View		
	1.3	Technology behind IoT – server end technology, Major components of IoT system, Development too, ls and Open-source Framework for IoT implementation, APIs and device Interfacing Components, platforms, and Integration tools, M2M		
2	**Design Principles for Connected Devices and Web Connectivity**		1,2	6
	2.1	Overview of NFC, RFID, Bluetooth, Bluetooth LE, Zigbee, Wi-Fi, GSM		
	2.2	Constrained RESTful Environment (CoRE), CoAP, REST, HTTP, HTTPS, and web-sockets		
	2.3	Internet connectivity		
3	**Sensors and Actuators**		1,2	4
	3.1	Sensor technology – Analog and digital sensors, temperature sensor, humidity sensor, distance sensor, light sensor, acceleration sensor		
	3.2	Participatory sensing, Industrial IoT		
	3.3	Actuators – LED, Piezoelectric vibrator , piezoelectric speaker, motor, relay switch		

4	**IoT Platforms Design Methodology**		1,2	4
	4.1	10 step IoT design Methodology		
	4.2	Case study: IoT system for Weather Monitoring		
5	**Case Studies Based on Smart Living**		1,2	4
	5.1	Smart lighting, gas/smoke detection		
	5.2	Smart parking, emergency response		
	5.3	Smart irrigation, wearable electronics for health and fitness monitoring		
6	**Case studies based on Connected Commerce**		1,2	4
	6.1	Inventory management, smart payment		
	6.2	Fleet tracking		
Total				**26**

Course Assessment:

Theory: **IA1:** One hours 20 Marks written examination for one hour
IA2: One hours 20 Marks written examination for one hour
ESE: Two hours 60 Marks written examination for two hours

			IA1	IA2	ESE		Total	
		Theory	20	20	60		100	

Course Objectives:

1. To introduce Robotics and discuss the Functional concepts of Robots
2. To explore and learn Configurations of Robots and their Kinematics
3. To introduce path planning techniques for Robotics
4. To explore sensors and understand the concepts of drives and grippers
5. To understand the applications of Robotics
6. To learn about Humanoid Robotics Technology and Social Robots

Course Outcomes	After the successful completion students should be able to	
	CO1	Understand the significance, social impact and future prospects of robotics and automation in various engineering applications.
	CO2	Understand the various configurations and kinematics of robots
	CO3	Know about various path planning techniques
	CO4	Learnt about sensors used in robots along with concepts of drives and grippers
	CO5	Explored the domains of applications for robotics
	CO6	Know about the Humanoid Robotics Technology and Social Robots.

Module No.	Topics	Reference	Hrs.
1	**Introduction:** Introduction to Robotics, Laws of robot, brief history of robotics, basic components of robot, robot specifications, classification of robots, human system and robotics, safety measures in robotics, social impact, Robotics market, and the future prospects, advantages and disadvantages of robots.	T1 T3 R6	4
2	**Configuration and Kinematics** Robot configurations: polar, cylindrical, Cartesian, and jointed arm configurations, Robot links and joints, Degrees of freedom: types of movements, vertical, radial and rotational traverse, roll, pitch and yaw, Wok volume/envelope, Robot kinematics: Introduction to direct and inverse kinematics, transformations and rotation matrix.	T1 T3 R3	4
3	**Sensors** Characteristics of sensing devices, Criterion for selections of sensors, Classification, & applications of sensors. Internal sensors: Position sensors, & Velocity sensors, External sensors Internal sensors: Position sensors, & Velocity sensors, External sensors: Proximity	T3 T5 R3	5

sensors, Tactile Sensors, & Force or Torque sensors

4	**Drives and Grippers:** Drives – Basic types of drives. Advantages and Disadvantages of each type. Selection / suitability of drives for Robotic application. Controllers, Types of Controllers, and introduction to close loop controller Grippers – Mechanisms for actuation, Magnetic gripper vacuum cup	T1 T5 R5	5
5	**Robotics Applications:** Material Handling: pick and place, palletizing and depalletizing, machining loading and unloading, welding & assembly, Medical, agricultural and space applications, unmanned vehicles: ground, Ariel and underwater applications, robotic for computer integrated manufacturing. Types of robots: Manipulator, Legged robot, wheeled robot, aerial robots, Industrial robots, Humanoids, Robots, Autonomous robots, and Swarm robots	T1 T3 R6	5
6	**Humanoid Robotics Technology and Social Robots:** Sensors in Humanoid Robot, Control of Humanoid Robot, actuation types for humanoid Robot, System Integration in Humanoid Robot, Social Robot, Need of Social Robots, Assistive and Social Robots in the Healthcare Sector and other, Case study On Humanoid Robot.	T4 T5 R5	5
Total			**26**

Course Assessment:

Theory:

IA1: One hours 20 Marks written examination for one hour
IA2: One hours 20 Marks written examination for one hour

ESE: Two hours 60 Marks written examination for two hours

Reference Books:

1. S. K. Saha, Introduction to Robotics, TATA McGraw Hills Education, 2014.
2. S. B. Nikku, Introduction to Robotics – Analysis, Control, Applications, 3rd edition, John Wiley & Sons Ltd., 2020.
3. Mikell Groover, Mitchell Weiss, Roger N. Nagel, Nicholas Odrey, Ashish Dutta, Industrial Robotics 2nd edition, SIE, McGraw Hill Education (India) Pvt. Ltd., 2012
4. Ganesh S Hegde, “A textbook on Industrial Robotics”, University science press, 3rdedition, 2017.
5. S.R. Deb, Robotics Technology and flexible automation, Tata McGraw-Hill Education, 2009.

Letter Grades and Grade Points:

Semester GPA/ Programme CGPA Semester/ Programme	% of Marks	Alpha-Sign/ Letter Grade Result	Grading Point
9.00 - 10.00	90.0 – 100	O (Outstanding)	10
8.00 - < 9.00	80.0 - < 90.0	A+ (Excellent)	9
7.00 - < 8.00	70.0 - < 80.0	A (Very Good)	8
6.00 - < 7.00	60.0 - < 70.0	B+ (Good)	7
5.50 - < 6.00	55.0 - < 60.0	B (Above Average)	6
5.00 - < 5.50	50.0 - < 55.0	C (Average)	5
4.00 - < 5.00	40.0 - < 50.0	P (Pass)	4
Below 4.00	Below 40.0	F (Fail)	0
Ab (Absent)	-	Ab (Absent)	0
