Item No. 143

AC23/7/2020 Item No. 143

UNIVERSITY OF MUMBAI

Syllabus for Approval

1	Title of the Course	S.Y of B.E in Instrumentation Engineering
2	Eligibility for Admission	After Passing First Year Engineering as per the Ordinance 0.6242
3	Passing Marks	40%
4	Ordinances / Regulations (if any)	Ordinance 0.6242
5	No. of Years / Semesters	8 semesters
6	Level	P.G. / U.G./-Diploma / Certificate (Strike out which is not applicable)
7	Pattern	Yearly / Semester (Strike out which is not applicable)
8	Status	New / Revised REV- 2019 'C' Scheme
9	To be implemented from Academic Year	With effect from Academic Year: 2020-2021

Date:

Dr. S.K.Ukarande Associate Dean Faculty of Science and Technology University of Mumbai Dr. Anuradha Majumdar Dean Faculty of Science and Technology University of Mumbai

Preamble

To meet the challenge of ensuring excellence in engineering education, the issue of quality needs to be addressed, debated and taken forward in a systematic manner. Accreditation is the principal means of quality assurance in higher education. The major emphasis of accreditation process is to measure the outcomes of the program that is being accredited. In line with this Faculty of Science and Technology (in particular Engineering) of University of Mumbai has taken a lead in incorporating philosophy of outcome based education in the process of curriculum development.

Faculty resolved that course objectives and course outcomes are to be clearly defined for each course, so that all faculty members in affiliated institutes understand the depth and approach of course to be taught, which will enhance learner's learning process. Choice based Credit and grading system enables a much-required shift in focus from teacher-centric to learner-centric education since the workload estimated is based on the investment of time in learning and not in teaching. It also focuses on continuous evaluation which will enhance the quality of education. Credit assignment for courses is based on 15 weeks teaching learning process, however content of courses is to be taught in 13 weeks and remaining 2 weeks to be utilized for revision, guest lectures, coverage of content beyond syllabus etc.

There was a concern that the earlier revised curriculum more focused on providing information and knowledge across various domains of the said program, which led to heavily loading of students in terms of direct contact hours. In this regard, faculty of science and technology resolved that to minimize the burden of contact hours, total credits of entire program will be of 170, wherein focus is not only on providing knowledge but also on building skills, attitude and self learning. Therefore in the present curriculum skill based laboratories and mini projects are made mandatory across all disciplines of engineering in second and third year of programs, which will definitely facilitate self learning of students. The overall credits and approach of curriculum proposed in the present revision is in line with AICTE model curriculum.

The present curriculum will be implemented for Second Year of Engineering from the academic year 2020-21. Subsequently this will be carried forward for Third Year and Final Year Engineering in the academic years 2021-22, 2022-23, respectively.

Dr. S. K. Ukarande Associate Dean Faculty of Science and Technology University of Mumbai Dr Anuradha Muzumdar Dean Faculty of Science and Technology University of Mumbai

Incorporation and Implementation of Online Contents from NPTEL/ Swayam Platform

The curriculum revision is mainly focused on knowledge component, skill based activities and project based activities. Self learning opportunities are provided to learners. In the revision process this time in particular Revised syllabus of 'C ' scheme wherever possible additional resource links of platforms such as NPTEL, Swayam are appropriately provided. In an earlier revision of curriculum in the year 2012 and 2016 in Revised scheme 'A' and 'B' respectively, efforts were made to use online contents more appropriately as additional learning materials to enhance learning of students.

In the current revision based on the recommendation of AICTE model curriculum overall credits are reduced to 171, to provide opportunity of self learning to learner. Learners are now getting sufficient time for self learning either through online courses or additional projects for enhancing their knowledge and skill sets.

The Principals/ HoD's/ Faculties of all the institute are required to motivate and encourage learners to use additional online resources available on platforms such as NPTEL/ Swayam. Learners can be advised to take up online courses, on successful completion they are required to submit certification for the same. This will definitely help learners to facilitate their enhanced learning based on their interest.

Dr. S. K. Ukarande Associate Dean Faculty of Science and Technology University of Mumbai Dr Anuradha Muzumdar Dean Faculty of Science and Technology University of Mumbai

PREAMBLE

Technical education in our country is progressing rapidly in manifolds. To maintain the quality of education a systematic approach is necessary, which can be obtained by building a strong technical base with the quality. Accreditation provides quality assurance in higher education and recognition to the institution or program, meeting certain specified standards. The main-focus of an accreditation process is to measure the program outcomes, essentially the range of skills and knowledge that a student will have at the time of graduation from the program. Faculty of Science & Technology of the University of Mumbai has taken a lead in incorporating a philosophy of outcome-based education in the process of curriculum development. The earlier syllabus was more focused on providing information and knowledge across various domains, which led to loading of students heavily, in terms of direct contact hours.

I, as a Chairman, Board of Studies in Instrumentation Engineering of University of Mumbai, happy to state here that, the revised curriculum focused on not only providing knowledge content but also on skill-based activities like attitudes, self-learning, and project-based activities. More than 30 senior faculty members from the different affiliated institutes of University of Mumbai were actively participated in this process. They are either Heads of Departments or their senior representatives from the Department of Instrumentation Engineering. The salient features of revised syllabus of Instrumentation Engineering, REV 2019 'C' Scheme are:

- 1. The overall credits and approach of the curriculum proposed in the present revision are in line with AICTE model curriculum.
- 2. Course objectives and course outcomes are framed as per NBA guidelines (Bloom's Taxonomy) and are clearly defined for each course.
- 3. Detailed guidelines are presented to understand the depth and the approach to course to be taught, which will enhance learner's learning process.
- 4. The credit and grading system enables a learner-centric education since the workload estimated is based on the investment of time in learning and not in teaching.
- 5. Minimizes the burden of contact hours, total credits of the entire program will be approximately 172. Learners are now getting sufficient time for self-learning either through online courses or additional projects for enhancing their knowledge and skillsets.
- 6. It also focuses on continuous evaluation which will enhance the quality of education.
- 7. Credit assignment for courses is based on 15 weeks teaching-learning process, however, the content of courses is to be taught in 12-13 weeks and the remaining 2-3 weeks to be utilized for revision, guest lectures, coverage of content beyond the syllabus, etc.
- 8. The revised curriculum emphasizes on skill-based laboratories and project-based learning by introducing mini projects in the second and third year of programs, which will facilitate self-learning of students.

Course Objectives	 The course is aimed To familiarize with the Laplace Transform, Inverse Laplace of various functions, and its applications. To acquaint with the concept of Fourier Series, its complex functions enhance the problem solving skills To familiarize the concept of complex variables, C-R equation harmonic functions, its conjugate and mapping in complex pp To understand the basics of Linear Algebra and its application To use concepts of vector calculus to analyze and model eng problems. 	form and ons, olane. ons
Course Outcomes	 On successful completion of course learner/student will be able of a solution of the solution of	integrals in functions in or real life using basic

Pre-requisite: Engineering Mathematics-I, Engineering Mathematics-II, Scalar and Vector Product: Scalar and vector product of three and four vectors.

Module	Detailed Contents	Hrs.
	Module: Laplace Transform	
	1.1 Definition of Laplace transform, Condition of Existence of Laplace transform.	
01	 Laplace Transform (L) of Standard Functions like e^{at}, sin(at), cos(at), sinh(at), cosh(at) and tⁿ, n ≥ 0. Properties of Laplace Transform: Linearity, First Shifting theorem, Second Shifting Theorem, change of scale Property, multiplication by t, Division by t, Laplace Transform of derivatives and integrals (Properties without proof). 	
	1.4 Evaluation of integrals by using Laplace Transformation.	
	Self-learning Topics: Heaviside's Unit Step function, Laplace Transform of Periodic functions, Dirac Delta Function.	
	Module: Inverse Laplace Transform	
	2.1 Inverse Laplace Transform, Linearity property, use of standard formulae to find inverse Laplace Transform, finding Inverse Laplace transform using derivatives.	CO-2
02	2.2 Partial fractions method to find inverse Laplace transform.	
	2.3 Inverse Laplace transform using Convolution theorem (without proof).	6
	Self-learning Topics: Applications to solve initial and boundary value problems involving ordinary differential equations.	
	Module: Fourier Series:	
	3.1 Dirichlet's conditions, Definition of Fourier series and Parseval's Identity (without proof).	CO-3
03	3.2 Fourier series of periodic function with period 2π and $2l$.	
	3.3 Fourier series of even and odd functions.	7
	3.4 Half range Sine and Cosine Series.	7
	Self-learning Topics: Complex form of Fourier Series, Orthogonal and orthonormal set of functions. Fourier Transform.	
	Module: Complex Variables:	
	4.1 Function $f(z)$ of complex variable, limit, continuity and differentiability of $f(z)$ Analytic function, necessary and sufficient conditions for $f(z)$ to be analytic (without proof).	CO-4
04	4.2 Cauchy-Riemann equations in cartesian coordinates (without proof).	
	4.3 Milne-Thomson method to determine analytic function $f(z)$ when real part (u) or Imaginary part (v) or its combination (u+v or u-v) is given.	7
	4.4 Harmonic function, Harmonic conjugate and orthogonal trajectories	
	Self-learning Topics: Conformal mapping, linear, bilinear mapping, cross ratio, fixed points and standard transformations.	

	Module: Linear Algebra: Matrix Theory	
	5.1 Characteristic equation, Eigen values and Eigen vectors, Example based on properties of Eigen values and Eigen vectors. (Without Proof).	CO-5
05	5.2 Cayley-Hamilton theorem (Without proof), Examples based on verification of Cayley- Hamilton theorem and compute inverse of Matrix.	
	5.3 Similarity of matrices, Diagonalization of matrices. Functions of square matrix	6
	Self-learning Topics: Application of Matrix Theory in machine learning and google page rank algorithms, derogatory and non-derogatory matrices.	
	Module: Vector Differentiation and Integral	
	6.1 Vector differentiation: Basics of Gradient, Divergence and Curl (Without Proof).	
06	6.2 Properties of vector field: Solenoidal and irrotational (conservative) vector fields.6.3 Vector integral: Line Integral, Green's theorem in a plane (Without Proof),	
	Stokes' theorem (Without Proof) only evaluation.	6
	Self-learning Topics: Gauss' divergence Theorem and applications of Vector calculus.	

Term Work:

General Instructions:

- 1. Students must be encouraged to write at least 6 class tutorials on entire syllabus.
- 2. A group of 4 6 students should be assigned a self-learning topic. Students should prepare a presentation/ problem solving of 10-15 minutes. This should be considered as mini project in Engineering mathematics. This project should be graded for 10 marks depending on the performance of the students.

The distribution of Term Work marks will be as follows –

1.	Attendance (Theory and Tutorial)	05 marks
2.	Class Tutorials on entire syllabus	10 marks
3.	Mini project	10 marks

Assessment:

Internal Assessment Test:

Assessment consists of two class tests of 20 marks each. The first-class test (Internal Assessment I) is to be conducted when approx. 40% syllabus is completed and second class test (Internal Assessment II) when additional 35% syllabus is completed. Duration of each test shall be one hour.

End Semester Theory Examination:

- 1. Question paper will comprise of total 06 questions, each carrying 20 marks.
- 2. Total 04 questions need to be solved.
- 3. Question No: 01 will be compulsory and based on entire syllabus wherein 4 sub-questions of 5 marks each will be asked.
- 4. Remaining questions will be randomly selected from all the modules.
- 5. Weightage of each module will be proportional to number of respective lecture hours as mentioned in the syllabus.

Course Objectives	 The course is aimed 1. To introduce the students for the purpose of explaining the masystems, errors of measurement. 2. To understand the definition and classification of sensors and based of their principle of operation and their applications in industries. 3. To familiarize the student with the identification, classification, classification, classification of various transducers displacement, level, temperature, speed and vibration measurem 	transducers the various onstruction, used for
Course Outcomes	 On successful completion of course learner/student will be able to 1. Explain the measurement systems, sources errors of measurement 2. List and compare various standards used for set transducers/sensors. 3. Describe the working principles of various displacement set transducers. 4. Interpret and apply different temperature transducers/sensors for applications. 5. Formulate and Design the solutions for given applicate appropriate level sensors and transducer. 6. Apply the techniques of speed and vibration measurement industries. 	ent. lection of sensors and or industrial ions using

Prerequisite: Units and standards of measurement, concept of transducers (resistive, piezoelectric, pressure, optical and pyro sensors, etc.), Knowledge of basic measurement.

Details of Syllabus:

Module	Contents	Hrs.	CO Mapping
1.	Instrumentation System Units and standards of measurement, Introduction, block diagram, functional elements of measurement system, static and dynamic characteristics of transducer, Measurement and calibration systems- Requirement. sources of errors and their statistical analysis, standards and calibration.	04	CO1
2.	Sensor and Transducer: Definition, working principle, classification (active, passive, primary, secondary, mechanical, electrical, analog, digital), selection criteria, transducer specifications, test condition and operating conditions.	04	CO2
3.	 Displacement transducers: Resistive type transducers: potentiometer (linear and logarithmic), piezoresistive effect. Inductive type transducers: LVDT, RVDT (transfer function, linearity, sensitivity, source, frequency dependence, phase null, and signal conditioning). Capacitive type transducers: Linear and rotary (with change in distance between plates, change in dielectric constant and change in overlapping area) Digital transducer: translational and rotary encoders (absolute position and incremental position encoders). Proximity sensors: inductive, capacitive, optical, ultrasonic, hall-effect and magnetic. Pneumatic transducer: flapper- nozzle transducer. Comparative study for Displacement Transducers with applications, and materials for capacitive, resistive, inductive and ultrasonic transducers. 	14	CO3
4.	 Temperature transducers: Modes of heat transfer, laws of conduction, convection and radiation, Temperature scales, classification of Temperature Sensors, Overview of mechanical temperature Sensors (thermometer, thermostat). Resistance temperature detector (RTD): Principle, types, Configurations, construction and working of RTD, Material for RTD, Signal Measurement techniques for RTD, Comparative Response curves for RTD, 2 wire, 3wire and 4 wire RTD Element, Lead wire Compensation in RTD, self-heating effect, Specifications, advantages, disadvantages and applications of RTD and sums. 	Pyrometers: Principle, Construction and working of Radiation and optical pyrometers and its Applications. Comparative study for Temperature Transducers.		
5.	Level Transducers: working principle, types, materials, design criterion: float, displacers, bubbler, and DP- cell, ultrasonic, capacitive, microwave, radar, radioactive type, laser type transducers, level gages, resistance, thermal, TDR/ PDS type (Time domain reflectometry/ Phase difference sensors), solid level detectors, fiber optic level detectors, Level switches. Comparative study for Level Transducers.	08	CO5
6.	Speed and Vibration Measurement: stroboscopes, toothed rotor, eddy current, electromagnetic transducers (moving coil, moving magnet), AC and DC tachometers: Hall Effect proximity pickup, photoelectric, photo-reflective, pulse counting method. Seismic, LVDT, piezoelectric.	08	CO6

Internal Assessment:

Internal Assessment consists of two tests out of which, one should be a compulsory class test (on minimum 02 Modules) and the other is either a class test or assignment on live problems or course project.

Theory Examination:

- 1. Question paper will comprise of 6 questions, each carrying 20 Marks.
- 2. Total 4 questions need to be solved.
- 3. Question No. 1 will be compulsory and based on entire syllabus wherein sub questions of 4 to 5 marks will be asked.
- 4. Remaining questions will be mixed in nature.
- 5. In question paper weightage of each module will be proportional to number of respective lecture hours as mentioned in the syllabus.

Course Objectives	 The course is aimed To familiarize the student with basic electronic devices and circu To analyze the DC biasing circuits, low and high frequency AC various electronic devices. To introduce the students with basic construction and op differential and multistage amplifier. To design different types voltage regulators and discuss amplifiers. To employ various devices for industrial and consumer electronic 	analysis of peration of the power
Course Outcomes	 On successful completion of course learner/student will be able to a successful completion of diodes and formulate the DC analysis. Formulate and attribute BJT biasing techniques and its frequency. Apply the basic construction and characteristics of FET to analy and AC circuits. Utilize the basic construction and characteristics of MOSFET to the DC and AC circuits. Describe the Differential and multistage amplifier and its stages Discuss the power amplifiers and design power supply using on the provide the prov	ysis of BJT. y response. yze the DC o formulate in detail.

Pre-requisite: Introduction of PN junction

Details of Syllabus:

Module	Contents	Hrs.	CO mapping
1.	Bipolar Junction Transistor: Introduction to Diodes and its applications as Clipper and Clamper, Bipolar Junction Transistor, Device structure and physical operation, characteristics, the BJT as an amplifier and a switch, DC Analysis of BJT Circuits, Biasing BJT Amplifier Circuits, Stability Analysis.	08	CO1
2.	BJT AC Analysis: Amplification in AC domain, BJT transistor modelling, The r _e Transistor model, Hybrid equivalent model for CE configuration, Derivation of parameters trans-conductance, input resistances, voltage gain and current gain. Single stage BJT amplifiers CE configuration (with and without feedback), Small Signal equivalent circuit, frequency response of a CE amplifier, low frequency response, high frequency response.	08	CO2
3.	Field effect Transistors: Introduction to JFET, Types, Construction, Operation, Static Characteristics, Pinch off voltage, FET Volt-Ampere characteristics, FET Configurations (CS/CD/CG) and their Comparison. Biasing of FET. FET as an amplifier and its analysis (CS) and its frequency response.	06	CO3
4.	MOS Field effect Transistors: Introduction to MOSFET as basic element in VLSI, Device structure and physical operation, current – voltage characteristics, the MOSFET as an amplifier and a switch, DC Analysis of MOSFET Circuits, Biasing MOSFET Amplifier Circuits, frequency response of a CS amplifier, low frequency response.	06	CO4
5.	Differential and Multistage Amplifiers: Preview, the Differential Amplifier, Basic BJT Differential Pair (SIBO, SIUO, DIBO, DIUO), Capacitive coupled and Direct coupled multistage amplifier. Differential Amplifier with Active Load, Gain Stage and Simple Output Stage, Diff-Amp Frequency Response.	04	CO5
6.	 Power Amplifier: Definition and amplifier types, Series fed class A amplifier, Transformer coupled class A amplifier, Class B amplifier operation and circuits, Amplifier distortion, Push Pull Amplifier, Power supply design using 78xx series, 79xx series and adjustable voltage IC regulators like 723 and 317. Switched Mode Power Supply (SMPS) – Block diagram with advantages and disadvantages over conventional power supply. 	07	CO6

Internal Assessment:

Internal Assessment consists of two tests out of which, one should be compulsory class test (on Minimum 02 Modules) and the other is either a class test or assignment on live problems or Course project.

Theory Examination:

- 1. Question paper will comprise of 6 questions, each carrying 20 Marks.
- 2. Total 4 questions need to be solved.

3. Question No. 1 will be compulsory and based on entire syllabus wherein sub questions of 4 to 5 marks will be asked.

4. Remaining questions will be mixed in nature.

5. In question paper weightage of each module will be proportional to number of respective Lecture hours as mentioned in the syllabus.

Course Objectives	 The course is aimed To provide an understanding of the principles of digital electron of number systems. To give knowledge about combinational circuits. To describe working and design methods of sequential circuits. To familiarize with the basics of asynchronous sequential circuits techniques. To provide understanding of memory devices and state machines To make the students understand basic logic families and their approximation. 	and design
Course Outcomes	 On successful completion of course learner/student will be able to the second second	orm number gates with

Pre-requisite: Knowledge of number systems and Boolean logic.

Details of Syllabus:

Contents	Hrs.	CO mapping
 Binary number system: Binary Arithmetic, Binary codes: Weighted, BCD, 8421, Gray code, Excess 3 code, ASCII, Error detecting code. Reduction methods: Boolean laws, De-Morgan's Theorem, Minimization of Boolean expressions, Sum of Products (SOP), Product of Sums (POS), Karnaugh map Minimization, Don't care conditions. 	06	CO1
Design of combinational logic circuits: Adders, Subtractors, Code conversion, Parity checker, Magnitude comparators, BCD adder, Multiplexer, Demultiplexer, Encoder and Decoder. Implementation of combinational logic circuits using Multiplexer and Demultiplexer. Hazards in logic circuits and its elimination.	10	CO2
Sequential logic circuits : Flip flops- SR, D and Master slave JK, T, Realization of one flip flop using other flip flops, Asynchronous & Synchronous counters, Modulo n counter, shift registers.	06	CO3
Asynchronous sequential circuits: Circuit Design – primitive state / flow table, Minimization of primitive state table, state assignment, Excitation table, Excitation map, cycles.	05	CO4
Logic families: Basics of digital integrated circuits, basic operational characteristics and parameters. TTL, Schottky clamped TTL, tri-state gate ECL, IIL, MOS devices CMOS comparison of logic families. PMOS, NMOS and E2 CMOS, BiCMOS.	06	CO5
Memory and programmable logic devices: PROM / EPROM / EEPROM / EAPROM Programmable Logic Devices – Programmable Logic Array (PLA), Programmable Array Logic (PAL), Introduction to Complex Programmable Logic Device (CPLD), Field Programmable Gate Arrays (FPGA).	06	CO6

ISC305	Electrical Networks and Measurements	4
Course Objectives	 The course is aimed To introduce the concept of circuit elements lumped circuits, circureduction. To introduce the concept of circuit elements and analyze DC and using various theorems. To analyze the transient response of series and parallel A.C. circ To analyze two port model of circuit and evaluate its parameters To synthesize the circuits using different techniques. To demonstrate basic analog and digital Instruments. To identify the various techniques for measurement of R-L-C. 	AC circuits uits.
Course Outcomes	 On successful completion of course learner/student will be able to a straight of the straight of the	e electrical meters like as of analog

Prerequisite: Analysis of DC networks for independent sources, mesh, node analysis, network theorems, and fundamentals of RLC networks.

Detailed Syllabus

Module	Contents	Hrs.	CO mapping
1.	Network TheoremsAnalysis of networks with dependent sources: mesh analysis, nodal analysis, super mesh and super node concept, source transformation technique, superposition theorem, Thevenin's theorem, Norton's theorem, Maximum power transfer theorem. 	12	CO1
2.	Transient Analysis Initial Conditions in Elements, Solution of a First order and Second order differential equations, Transients in R-L, R-C and RLC Circuits.	08	CO2
3.	Network Functions and Two-Port parametersNetwork functions for one port and two port networks, driving point and transfer functions, ladder network, poles and zeros of network functions, time domain behaviour from pole-zero plot.Two-Port parameters, Open circuit, Short circuit, transmission and hybrid parameters, relationship between parameter sets, reciprocity and symmetry conditions, parallel connection of two port networks.	08	CO3
4.	Fundamentals of Network Synthesis. Causality and stability, Hurwitz polynomials, positive real functions, synthesis of one port networks with two kinds of elements. Properties and synthesis of L-C, R-C, R-L driving point impedances, synthesis of R-L-C function.	10	CO4
5.	Analog & Digital Meters D'Arsonaval galvanometers, PMMC and PMMI instruments. Shunts and multipliers, Construction and working principle of: ammeters, voltmeters, ohmmeters, power factor meter, energy meter, Q meters, Analog multimeters. Electronic Voltmeters, Digital Voltmeter and digital multimeter. CRO, Measurement of phase and frequency.	07	CO5
6.	Measurement of R, L, C Measurement of medium, low and high resistance, Megger AC bridges, measurement of self and mutual inductances (Maxwell and Hay Bridges). Measurement of capacitance (Schering Bridge). Derivations and numerical related to all bridges.	07	CO6

Internal Assessment Test:

Internal Assessment consists of two tests out of which, one should be compulsory class test (on Minimum 02 Modules) and the other is either a class test or assignment on live problems or Course project.

Course Objectives	 The course is aimed 1. To make students understand the Identification, construction principle of various transducers used for Displacement measurement, Level measurement and mi measurement. 2. To experimentally verify the principle and characteristics transducers. 	easurement, scellaneous
Course Outcomes	 On successful completion of course learner/student will be able to a successful completion of course learner/student will be able to a successful completion of course learner/student will be able to a successful complete the successful construction and successful construction and operation of various level transformed to a successful construction and operation of various level transformed to a successful construction and operation of various level transformed to a successful construction and operation of various level transformed to a successful construction and operation of various level transformed to a successful construction and operation of various level transformed to a successful construction and operation of various level transformed to a successful construction and operation of various level transformed to a successful construction and operation of various level transformed to a successful construction and operation of various level transformed to a successful construction and operation of various level transformed to a successful construction and operation of various level transformed to a successful construction and operation of various level transformed to a successful construction and operation of various level transformed to a successful construction and operation of various level transformed to a successful construction and operation of various level transformed to a successful construction and operation of various level transformed to a successful construction and operation of various level transformed to a successful construction and operation of various level transformed to a successful construction and operation of various level transformed to a successful construction and operation of various level transformed to a successful construction and operation of various level transformed to a successful construction and operation of various level transformed to a successful construction and operation of various level transformed to a successful construction and operation of various level t	measuring isplacement rs.

Syllabus: Same as that of Subject ISC302 Transducers-I

List of Experiments:

Contents	CO Mapping
Demonstrate the basic measurements techniques and Measuring Instruments.	CO1
Plot response curve for Flapper Nozzle system and validate the results with stand values.	CO2
Plot and validate the LVDT characteristics.	CO3
	Demonstrate the basic measurements techniques and Measuring Instruments. Plot response curve for Flapper Nozzle system and validate the results with stand values.

4.	Test and evaluate distance using ultrasound transducer.	CO3
5.	Measure and verify the given displacement using Potentiometer.	CO3
6.	Plot and validate the characteristics of RTD	CO4
7.	Draw and validate the characteristics of various Thermocouples.	CO4
8.	Draw and validate the characteristics of Thermistors.	CO4
9.	Test and compare temperature measurement with and without Thermo-well.	CO4
10.	Perform and validate Liquid Level Measurement using DP Cell	CO5
11.	Plot and validate performance characteristics of capacitive level sensor.	CO5
12.	Perform and distinguish Liquid Level Measurement using Tubular Level Gauge and ultra-sonic sensor.	CO5
13.	Plot the static characteristics of different proximity sensors.	CO6
14.	Demonstrate the Humidity measurement.	CO6

Any other experiments based on syllabus which will help students to understand topic/concept.

Practical/Oral Examination:

Practical Examination will be based on performing one Experiment in the Laboratory from the List of Experiments given in the syllabus & the Oral Examination will be based on ISC 302 Transducer-I

Term Work:

- 1) Minimum of **Ten** experiments covering all cos can be conducted during the semester for term work and practical examination.
- 2) Assignments based on syllabus which will help students to understand the Topic can be given during the semester as a support to Evaluate Term work.

The distribution of marks for term work shall be as follows:

Laboratory work (Experiments/assignments)	: 10 Marks
Laboratory work (journal)	: 10 Marks
Attendance (class Room plus Lab Practice)	: 05 Marks

The final certification and acceptance of term work ensures the satisfactory performance of Laboratory work and minimum passing in the term work.

Course Objectives	 The course is aimed To familiarize the student with basic electronic devices and circu To modal and analyze applications of diodes, bipolar and MC biasing circuits, AC analysis and low and high Frequency respon To experiment with differential and multistage amplifier. To design different types of power supply. 	OSFET, DC
Course Outcomes	 On successful completion of course learner/student will be able to DC analysis of BJT. Analyze BJT biasing techniques and frequency response. Plot and evaluate parameters using FET characteristics. Draw and evaluate parameters of MOSFET characteristics. Implement and simulate Differential amplifier configuration Design of power supply. 	to:

Syllabus: Same as that of Subject ISC303 Analog Electronics.

List of Experiments:

Sr. No	Contents	CO mapping
1.	Design the Diode circuit as Clipper and Clamper.	CO1
2.	Verify the input -output characteristics of BJT in CE configuration.	CO1
3.	Implementation of a biasing circuit for BJT and estimate the parameters.	CO1
4.	Plot and validate the frequency response of BJT amplifier.	CO2
5.	Analyse the JFET circuit and validate its transfer characteristics.	CO3
6.	Plot and validate the frequency response of FET amplifier.	CO3
7.	Analyse the MOSFET circuit and validate its transfer characteristics.	CO4
8.	Plot the frequency response of MOSFET amplifier	CO4
9.	Simulate the multistage amplifier and analyse its frequency response with the help of simulation software.	CO5
10.	Simulate the differential amplifier and analyse its frequency response with the help of simulation software.	CO5
11.	Simulate the class A power amplifier and analyse with the help of simulation software.	CO6
12.	Design of fixed voltage regulator using adjustable regulator IC.	CO6

Any other experiment based on syllabus which will help students to understand topic/concept.

Practical/Oral Examination:

Practical Examination will be based on performing one Experiment in the Laboratory from the List of Experiments given in the syllabus & the Oral Examination will be based on **ISC303 Analog Electronics.**

Term Work:

Term work shall consist of minimum 08 Experiments covering all COs and any 02 practical should be verified with simulation software.

The distribution of marks for term work shall be as follows:

Laboratory work (Experiments/assignments)	: 10 Marks
Laboratory work (journal)	: 10 Marks
Attendance (class Room plus Lab Practice)	: 05 Marks

The final certification and acceptance of term work ensures the satisfactory performance of Laboratory work and minimum passing in the term work

To give knowledge about combinational circuits, To describe working and design methods of sequential circuits. To familiarize with the basics of asynchronous sequential circuits techniques. To provide understanding of memory devices and state machines To make the students understand basic logic families and their approximation. 	s and design
Course Outcomes	 On successful completion of course learner/student will be able to 1. Demonstrate numerical values in various number systems as number conversions between different number systems. 2. Exemplify operation of logic gates using IEEE/ANSI standar Analyze and design, digital combinational circuits. 3. Design and validate sequential logic circuits. 4. Design and verify asynchronous sequential logic circuits. 5. Demonstrate nomenclature and technology in memory devices. 6. Analyze logic families and their application to design the digital 	nd perform rd symbols.

Syllabus: Same as that of Subject ISC304 Digital Electronics.

List of Experiments:

Sr. No	Detailed Contents	CO Mapping
1	Implement conversion of Gray/Binary code.	CO1
2	Truth table verification and implementation of all gates using Universal gates.	CO2
3	Implementation of half/ full adder/ Subtractor.	CO2
4	Implementation of magnitude comparator.	CO3
5	Realise full adder using 2:1 Multiplexer.	CO3
6	Realise full Subtractor using 2:1 Multiplexer.	CO3
7	Implementation of various flip-flops.	CO4
8	Design and implement RS flip flop into other flip flops.	CO4
9	Design and implement JK flip flop into other flip flops.	CO4
10	Design and implement modulo-n counter.	CO5
11	Design and implement ring counter.	CO5
12	Design and implement universal shift register.	CO5
13	Implement BCD to seven segments display.	CO6
14	Design finite state machine for a digital lock	CO6

Any other experiment based on syllabus which will help students to understand topic/concept.

Practical/Oral Examination:

Practical Examination will be based on performing one Experiment in the Laboratory from the list of Experiments given in the syllabus & the Oral Examination will be based on **ISC304 Digital Electronics.**

ISL304	Object Oriented Programming- Lab	1.5
Course Objectives	 The course is aimed 1. To learn the object-oriented programming concepts 2. To study various java programming constructs like mult exception handling, packages etc. 3. To explain components of GUI based programming 	ithreading,
Course Outcomes	 On successful completion of course learner/student will be able to Apply fundamental programming constructs. Illustrate the concept of packages, classes and objects. Elaborate the concept of strings arrays and vectors. Implement the concept of inheritance and interfaces. Implement the notion of exception handling and multithreading. Develop GUI based application 	:

Prerequisite: Structured Programming Approach

Details of Syllabus:

Module	Contents	Hrs.	CO Mapping
1	Introduction to Object Oriented Programming OO Concepts: Object, Class, Encapsulation, Abstraction, Inheritance, Polymorphism. Features of Java, JVM Basic Constructs/Notions: Constants, variables and data types, Operators and Expressions, Revision of Branching and looping	02	CO1
2	Classes, Object and Packages Class, Object, Method. Constructor, Static members and methods Passing and returning Objects Method Overloading, Packages in Java, creating user defined packages, access specifiers.	03	CO2
3	Array, String and Vector Arrays, Strings, String Buffer, Wrapper classes, Vector	02	CO3
4	Inheritance and Interface Types of Inheritance, super keyword, Method Overriding, abstract class and abstract method, final keyword, Implementing interfaces, extending interfaces	02	CO4
5	Exception Handling and Multithreading Error vs Exception, try, catch, finally, throw, throws, creating own exception, Thread lifecycle, Thread class methods, creating threads, Synchronization	02	CO5
6	GUI programming in JAVA Event Handling: Event classes and event listener Introduction to AWT: Working with windows, Using AWT controls- push Buttons, Label, Text Fields, Text Area, Checkbox and Radio Buttons.	02	CO6

Text books:

- 1. Herbert Schildt, 'JAVA: The Complete Reference', Ninth Edition, Oracle Press.
- 2. Sachin Malhotra and Saurabh Chaudhary, "Programming in Java", Oxford University Press, 2010

Reference Books:

- 3. 'JAVA Programming', Black Book, Dreamtech Press.

List of Experiments/ Assignments:

Sr. No.	Detailed Contents	CO mapping
1.	Program on various ways to accept data through keyboard and unsigned right shift operator.	CO1
2.	Program on branching, looping, labelled break and labelled continue.	CO1
3.	Program to create class with members and methods, accept and display details for single object.	CO2
4.	Program on constructor and constructor overloading	CO2
5.	Program on method overloading	CO2
6.	Program on passing object as argument and returning object	CO2
7.	Program on creating user defined package	CO2
8.	Program on 1D array	CO3
9.	Program on 2D array	CO3
10.	Program on String	CO3
11.	Program on String Buffer	CO3
12.	Program on Vector	CO3
13.	Program on single and multilevel inheritance (Use super keyword)	CO4
14.	Program on abstract class	CO4
15.	Program on interface demonstrating concept of multiple inheritance	CO4
16.	Program on dynamic method dispatch using base class and interface reference.	CO4
17.	Program to demonstrate try, catch, throw, throws and finally.	CO5
18.	Program to demonstrate user defined exception	CO5
19.	Program on multithreading	CO5
20.	Program on concept of synchronization	CO5
21.	Program to create GUI application without event handling using AWT controls	CO6
22.	Program to create GUI application without event handling using AWT controls	CO6
23.	Program to create GUI application without event handling using AWT controls	CO6
24.	Program to create GUI application with event handling using AWT controls	CO6
25.	Mini Project based on content of the syllabus. (Group of 2-3 students)	CO1-CO6

Any other experiment based on syllabus which will help students to understand concept.

Practical and Oral Examination:

Practical and Oral examination will be based on entire syllabus.

Term Work:

Term work shall consist of minimum 20 programs from the list of suggested programs, two assignments covering whole syllabus and one Mini-project of your choice.

The distribution of marks for term work shall be as follows:

Laboratory work (Performing Experiments): 10 Marks

Laboratory work (programs/ journal) : 05 Marks

Mini Project : 05 Marks

Marks Attendance : 05 Marks

The final certification and acceptance of term work ensures the satisfactory performance of laboratory work and minimum passing in the term work.

ISM301	Mini Project – 1 A	1.5
Course Objectives	 The course is aimed 1. To acquaint with the process of identifying the needs and converting the problem. 2. To familiarize the process of solving the problem in a group. 3. To acquaint with the process of applying basic engineering fundamentatempt solutions to the problems. 4. To inculcate the process of self-learning and research. 	-
Course Outcomes	 On successful completion of course learner/student will be able to Identify problems based on societal /research needs. Apply Knowledge and skill to solve societal problems in a grading of the proper inferences from available results through the experimental/simulations. Analyse the impact of solutions in societal and environmental for sustainable development. Use standard norms of engineering practices Excel in written and oral communication. Demonstrate capabilities of self-learning in a group, which learning. Demonstrate project management principles during project was 	roup. r leader. eoretical/ context eads to life

Guidelines for Mini Project

- Students shall form a group of 3 to 4 students, while forming a group shall not be allowed less than three or more than four students, as it is a group activity.
- Students should do survey and identify needs, which shall be converted into problem statement for mini project in consultation with faculty supervisor/head of department/internal committee of faculties.
- Students hall submit implementation plan in the form of Gantt/PERT/CPM chart, which will cover weekly activity of mini project.
- A log book to be prepared by each group, wherein group can record weekly work progress, guide/supervisor can verify and record notes/comments.
- Faculty supervisor may give inputs to students during mini project activity; however, focus shall be on self-learning.
- Students in a group shall understand problem effectively, propose multiple solution and select best possible solution in consultation with guide/ supervisor.
- Students shall convert the best solution into working model using various components of their domain areas and demonstrate.
- The solution to be validated with proper justification and report to be compiled in standard format of University of Mumbai.
- With the focus on the self-learning, innovation, addressing societal problems and entrepreneurship quality development within the students through the Mini Projects, it is preferable that a single project of appropriate level and quality to be carried out in two semesters by all the groups of the students. i.e. Mini Project 1 in semester III and IV. Similarly, Mini Project 2 in semesters V and VI.
- However, based on the individual students or group capability, with the mentor's recommendations, if the proposed Mini Project adhering to the qualitative aspects mentioned above gets completed in odd semester, then that group can be allowed to work on the extension of the Mini Project with suitable improvements/modifications or a completely new project idea in even semester. This policy can be adopted on case by case basis.

Guidelines for Assessment of Mini Project:

Term Work

• The review/ progress monitoring committee shall be constituted by head of departments of each institute. The progress of mini project to be evaluated on continuous basis, minimum two reviews in each semester.

- In continuous assessment focus shall also be on each individual student, assessment based on individual's contribution in group activity, their understanding and response to questions.
- Distribution of Term work marks for both semesters shall be as below;

0	Marks awarded by guide/supervisor based on log book	: 10
0	Marks awarded by review committee	: 10
0	Quality of Project report	: 05

Review/progress monitoring committee may consider following points for assessment based on either one year or half year project as mentioned in general guidelines.

One-year project:

- In first semester entire theoretical solution shall be ready, including components/system selection and cost analysis. Two reviews will be conducted based on presentation given by students group.
 - First shall be for finalisation of problem
 - Second shall be on finalisation of proposed solution of problem.
- In second semester expected work shall be procurement of component's/systems, building of working prototype, testing and validation of results based on work completed in an earlier semester.
 - First review is based on readiness of building working prototype to be conducted.
 - Second review shall be based on poster presentation cum demonstration of working model in last month of the said semester.

Half-year project:

In this case in one semester students' group shall complete project in all aspects including,

- Identification of need/problem
- Proposed final solution
- Procurement of components/systems
- Building prototype and testing

Two reviews will be conducted for continuous assessment,

- First shall be for finalisation of problem and proposed solution
- Second shall be for implementation and testing of solution.

University of Mumbai, Instrumentation Engineering, REV 2019 'C' Scheme

Assessment criteria of Mini Project.

Mini Project shall be assessed based on following criteria;

- 1. Quality of survey/ need identification
- 2. Clarity of Problem definition based on need.
- 3. Innovativeness in solutions
- 4. Feasibility of proposed problem solutions and selection of best solution
- 5. Cost effectiveness
- 6. Societal impact
- 7. Innovativeness
- 8. Cost effectiveness and Societal impact
- 9. Full functioning of working model as per stated requirements
- 10. Effective use of skill sets
- 11. Effective use of standard engineering norms
- 12. Contribution of an individual's as member or leader
- 13. Clarity in written and oral communication
- In **one year, project**, first semester evaluation may be based on first six criteria's and remaining may be used for second semester evaluation of performance of students in mini project.
- In case of **half year project** all criteria's in generic may be considered for evaluation of performance of students in mini project.

Guidelines for Assessment of Mini Project Practical/Oral Examination:

- Report should be prepared as per the guidelines issued by the University of Mumbai.
- Mini Project shall be assessed through a presentation and demonstration of working model by the student project group to a panel of Internal and External Examiners preferably from industry or research organisations having experience of more than five years approved by head of Institution.
- Students shall be motivated to publish a paper based on the work in Conferences/students competitions.

Mini Project shall be assessed based on following points;

- 1. Quality of problem and Clarity
- 2. Innovativeness in solutions
- 3. Cost effectiveness and Societal impact
- 4. Full functioning of working model as per stated requirements
- 5. Effective use of skill sets
- 6. Effective use of standard engineering norms
- 7. Contribution of an individual's as member or leader
- 8. Clarity in written and oral communication

Course Objectives	 The course is aimed To study the line and contour integrals and expansion of comfunction in a power series. To understand the basic techniques of statistics for dat Machine learning and AI. To study the probability distributions and expectations. To acquaint with the concepts of vector spaces used in machine learning and engineering problems. To familiarize with the concepts of Quadratic forms and Sin decomposition. To learn the concepts of Variations. 	ta analysis, the field of
Course Outcomes	 On successful completion of course learner/student will be able of the concepts of Complex Integration for evaluating computing residues & evaluate various contour integrals. Demonstrate the use of Correlation and Regression to the problems in data science, machine learning and AI. Illustrate understanding of the concepts of probability and for getting the spread of the data and distribution of probabil Apply the concept of vector spaces and orthogonalization Engineering Problems. Use the concept of Quadratic forms and Singular value decorvarious Engineering applications. Find the extremals of the functional using the concept of variation. 	g integrals, engineering expectation lities. process in nposition in

Pre-requisite: Engineering Mathematics-I, Engineering Mathematics-II, Engineering Mathematics-III, Binomial Distribution.

Module	Detailed Contents	Hrs.				
01	 Module: Complex Integration 1.1 Line Integral, Cauchy's Integral theorem for simple connected and multiply connected regions (without proof), Cauchy's Integral formula (without proof). 1.2 Taylor's and Laurent's series (without proof). 	CO-1				
	1.3 Definition of Singularity, Zeroes, poles of $f(z)$, Residues, Cauchy's Residue Theorem (without proof).	7				
	Self-learning Topics: Application of Residue Theorem to evaluate real integrations, Z- Transform.					
	Module: Statistical Techniques	CO-2				
02	 2.1 Karl Pearson's Coefficient of correlation (r). 2.2 Spearman's Rank correlation coefficient (R) (repeated and non-repeated ranks) 2.3 Lines of regression. 2.4 Fitting of first and second degree curves. 	6				
	Self-learning Topics: Covariance, fitting of exponential curve.					
	Module: Probability Distributions					
03	 2.1 Baye's Theorem, Random variable: Probability distribution for discrete and continuous random variables, Density function and distribution function. 3.2 Expectation, mean and variance. 3.3 Probability distribution: Poisson & normal distribution. 	CO-3				
	Self-learning Topics: Moments, Moment Generating Function, Applications of Probability Distributions in Engineering.	7				
	Module: Linear Algebra: Vector Spaces:-					
04	 4.1 Vectors in n-dimensional vector space, norm, dot product, The Cauchy Schwarz inequality (with proof), Unit vector. 4.2 Orthogonal projection, Orthonormal basis, Gram-Schmidt process for vectors. 4.3 Vector spaces over real field, subspaces. 					
	Self-Learning Topics:- Linear combinations, linear Dependence and Independence, QR decomposition.					

	Module: Linear Algebra: Quadratic Forms	
05	 5.1 Quadratic forms over real field, Linear Transformation of Quadratic form, Reduction of Quadratic form to diagonal form using congruent transformation. 5.2 Rank, Index and Signature of quadratic form, Sylvester's law of inertia, Value-class of a quadratic form-Definite, Semidefinite and Indefinite. 5.3 Reduction of Quadratic form to a canonical form using congruent transformations. 5.4 Singular Value Decomposition. Self-learning Topics: Orthogonal Transformations, Applications of Quadratic 	CO-5 7
	forms and SVD in Engineering.	
	Module: Calculus of Variations:	
	6.1 Euler- Lagrange equation (Without Proof), When F does not contain y, When F	CO-6
06	 does not contain x, When F contains x, y, y'. 6.2 Isoperimetric problems- Lagrange Method. 6.3 Functions involving higher order derivatives: Rayleigh-Ritz Method. 	6
	Self-Learning Topics:- Brachistochrone Problem, Variational Problem, Hamilton Principle, Principle of Least action, Several dependent variables.	0

Term Work:

General Instructions:

1. Students must be encouraged to write at least 6 class tutorials on entire syllabus.

2. A group of 4-6 students should be assigned a self-learning topic. Students should prepare a presentation/problem solving of 10-15 minutes. This should be considered as mini project in Engineering mathematics. This project should be graded for 10 marks depending on the performance of the students.

The distribution of Term Work marks will be as follows -

1.	Attendance (Theory and Tutorial)	05 marks
2.	Class Tutorials on entire syllabus	10 marks
3.	Mini project	10 marks

Assessment:

Internal Assessment Test:

Assessment consists of two class tests of 20 marks each. The first-class test (Internal Assessment I) is to be conducted when approx. 40% syllabus is completed and second class test (Internal Assessment II) when additional 35% syllabus is completed. Duration of each test shall be one hour.

End Semester Theory Examination:

- 1. Question paper will comprise of total 06 questions, each carrying 20 marks.
- 2. Total 04 questions need to be solved.
- 3. Question No: 01 will be compulsory and based on entire syllabus wherein 4 sub-questions of 5 marks each will be asked.
- 4. Remaining questions will be randomly selected from all the modules.
- 5. Weightage of each module will be proportional to number of respective lecture hours as mentioned in the syllabus.

	<u> </u>	
Subject Code	Subject Name	Credits
ISC402	Transducers-II	4
Course Objectives	 The course is aimed 1. To make students understand the construction, working prapplication of various transducers used for flow measurement measurement, pressure and vacuum measurement, force, torque measurement 2. To study electro-chemical sensors and transducers used for or viscosity measurement 	nent, strain e and power
Course Outcomes	 On successful completion of course learner/student will be able of 1. Explain working principle of strain gauges. 2. Demonstrate working principle of pressure transducers 3. Illustrate basic fundamentals of flow transducers. 4. List and identify flow transducers for flow measurement. 5. Describe the terminologies of electrochemical sensors and their a in industry. 6. Select sensors for force measurement, density, humidity, pH measurement. 	applications

Prerequisite: Units and standards of measurement, concept of transducers (resistive, piezoelectric, pressure, etc.), Knowledge of basic measurement.

Details of Syllabus:

Module	Contents	Hrs.	CO mapping
1.	Strain Measurement Introduction, types of strain gauge, gauge factor calculation, materials for strain gauge, resistance strain gauge bridges, temperature compensation and applications of strain gauges and its sums.	04	CO1
2.	 Pressure Measurement Pressure scales, units and relations, classification Primary pressure sensors - elastic elements like bourdon tube, diaphragm, bellows, properties and selection of elastic materials, Calibration using dead weight tester. Electrical/Secondary Pressure Transducers: Capacitive, piezo-electric and its material, variable reluctance, LVDT, strain gauge. High Pressure Measurement: Bulk modulus cell, Bridgeman type. Differential pressure measurement: Materials, construction and working of DP Cell. Pressure measurement using manometer: U-tube types, well type, inclined type, micro manometer and its sums. Vacuum Measurement Units and relations, McLeod gauge, Pirani gauge, thermocouple gauge 	14	CO2
3.	Fundamentals of flow measurement Properties of fluid, types of fluid, dimensionless numbers, types of fluid flow, continuity equation, Bernoulli's equation, hydrostatic law, Pascal's law, flow through pipes – major and minor losses, flow measurement through open channel-weirs and notches. Materials used for flow sensors, performance of materials, corrosion resistors, erosion, effect of vapour pressure	08	CO3
4.	Flow Measurement Head Type: Orifice, Venturi, Nozzle, Pitot tube, Annubar, characteristics of head type flow meters and its sums. Variable Area Type: Rotameter Velocity and Inertia based flowmeters: Turbine, Electromagnetic, Ultrasonic, Positive displacement, Anemometers, Mass flow measurement: Coriolis and Vortex flow meter Solid flow measurements.	14	CO4
5.	Electro-chemical Sensors: Terminology, equations, units. pH measurement-electrodes, measuring circuits, maintenance, temperature compensation, calibration. Conductivity measurement-probes and measuring circuits	06	CO5
6.	Force Measurement: Strain gauge, LVDT, piezoelectric. Torque: Torsion bar, strain gauge. Density Measurement – Displacement and float type densitometers Hydrometers, Radiation and Ultrasonic densitometers Viscosity Measurement – Capillary tube viscometer, Efflux type viscometer, Variable area viscometer University of Mumbai, Instrumentation Engineering, REV 2019 'C' Scheme	06	CO6

Internal Assessment:

Internal Assessment consists of two tests out of which, one should be compulsory class test (on minimum 02 Modules) and the other is either a class test or assignment on live problems or course project.

Theory Examination:

- 1. Question paper will comprise of 6 questions, each carrying 20 Marks.
- 2. Total 4 questions need to be solved.
- 3. Question No. 1 will be compulsory and based on entire syllabus wherein sub questions of 4 to 5 marks will be asked.
- 4. Remaining questions will be mixed in nature.
- 5. In question paper weightage of each module will be proportional to number of respective lecture hours as mentioned in the syllabus.
- 6. The weightage for numerical should be of maximum 25%.

Prerequisite: Knowledge of various sensors and basic electronics.

Details of Syllabus:

Module	Contents	Hrs.	CO mapping
	Fundamentals of Operational Amplifier		
1.	Block diagram of Operational amplifier, Ideal Op Amp, characteristics of op-amp, op-amp parameters, Operational amplifier open loop and closed loop configurations, Inverting and non-inverting amplifier.	04	CO1
	Linear Applications of Operational Amplifier		
2.	Amplifiers: Adder, subtractor, difference amplifier, Integrator, and practical integrator, , Differentiator and practical differentiator, Current to Voltage converter, voltage to current converter (grounded and floating load), Instrumentation amplifier with three Op-amps, and application of Op-Amp in Transducer Measurement System.	08	CO2
	Nonlinear Applications of Operational Amplifier		
3.	Comparator and its characteristics, Zero Crossing Detector (ZCD), Schmitt trigger, window detector, Sample and Hold Circuit, Peak to Peak Detector, Precision half wave and full wave rectifiers, Sine wave oscillators using op- amp.: Barkhausen criteria, Wein bridge oscillator, RC phase shift oscillator. Waveform Generators: Square wave generator and triangular wave generator, Design and applications of Multivibrators: Astable, Monostable using IC 555, PLL.	08	CO3
	Analog Signal Conditioning		
4.	Standard analog signals, Signal Level and bias changes, Linearization, conversion, filtering and impedance matching, concept of loading. Voltage divider, Wheatstone bridge circuits, Active filter.Guidelines for analog signal conditioning design and design based	04	CO4
	problems.		
	Digital Signal Conditioning	~-	
5.	Converters – ADCs and their different types, DACs and their different types, V to F and F to V converters. Characteristics of digital data – digitized value, sampled data system and linearization.	07	CO5
	Transducer Signal Conditioning		
6.	Signal Conditioning of Temperature, Pressure, optical, strain gauges, Displacement and piezoelectric transducers signal conditioning.	08	CO6
	Data logger circuit, Data acquisition system (Block Diagram Level)

Course Objectives	 The course is aimed The students should be able to learn the type of System, dyn physical systems, classification of control system, analysis at objective. The students should learn how to represent system by transfer and block diagram reduction method and Mason's gain formula The students should able to learn time response analysis and der their knowledge to frequency response. Students can be able to learn stability analysis of system using bode plot, polar plot, and Nyquist plot. 	nd design r function a. monstrate
Course Outcomes	 On successful completion of course learner/student will be able of 1. Identify open-loop and closed-loop control systems 2. Formulate mathematical model for the physical systems 3. Simplify representation of complex systems using reduction teed 4. Identify performance characteristics of first and second-order systems 5. Apply root-locus technique for stability analysis. 6. Analyze performance characteristics of systems using frequency methods. 	chniques. ystems.

Prerequisite: Knowledge of mathematics and network theory.

Details of Syllabus:

Module	Contents	Hrs.	CO mapping
1	Introduction Definition of control system and related terms, open loop and closed loop system, examples. Development of automatic control systems, classification of control system, examples	04	CO1
2	Mathematical Models of Physical Systems Definition of physical systems, principle of superposition and homogeneity, linear/non-linear, time variant/time invariant systems. Types of dynamic model, linear elements of electrical and mechanical systems.	06	CO2
3	TransferFunctionandFeedbackCharacteristicsDefinition of transfer function, sinusoidal transfer function, transferfunctions of physical systems, block diagram algebra, reduction rules,signal flow graphs-definition, construction, properties, and Mason's gainformula, effect of feedback, effect of disturbances signals.	09	CO3
4	Time Response Analysis Standard test signals, pulse and impulse function, step function, ramp function, parabolic function, sinusoidal function, dynamic response, time response of first order system, time response of second order system, specifications, steady - state error, system types and error constants, design specifications of second order system- desired close loop pole location and the dominant condition.	08	CO4
5	Stability Analysis and Root Locus Concept of stability, definitions, bounded input-bounded output stability, relative stability, necessary and sufficient conditions for stability, Routh stability criterion, relative stability analysis, root locus technique, applications, concept, construction of root loci, root loci of different systems, electrical RLC circuits, etc.	06	CO5
6	Frequency Response and Stability Analysis Correlation between time and frequency response, polar plots, Bode plots, Nyquist stability criterion, frequency response specifications, stability analysis using-bode, polar, definitions and significance of gain margin and phase margin.	06	CO6

2							

Prerequisite: Knowledge of sensors, Measurement system, basic control system and Electrical Engineering.

Details of Syllabus:

Module	Contents	Hrs.	CO mapping
1	 Pneumatic system components Pneumatic System Components: ISA symbols, Instrument Air and Plant Air. Air compressor system and its accessories. Directional control valves and special types of pneumatic valve such as Pilot-operated valves, Non- return valves, Flow control valves, Sequence valves, and Time delay valve, Linear actuators- Single-acting, Double-acting, and special type of double- acting cylinder, Rotary actuators- Air motors. Process Control Pneumatics: Volume boosters, Air relays, Pneumatic logic gates, Pneumatic Circuits-Standard Symbols used for developing pneumatic circuits, Sequence diagram. 	10	CO1
2	Hydraulic System Components: Hydraulic pumps(centrifugal, gear , lobe), Pressure regulation method, Loading valves, Hydraulic valves, Electro Hydraulic actuators, speed control circuits for Hydraulic actuators, Selection and comparison of pneumatic, hydraulic and electric systems.	04	CO2
3	Transmitters Need, specifications and classification of transmitters, Need for Standardization of signals, concept of live zero and dead zero, 2-wire; 3- wire and 4-wire transmitters and its calibration, Electronic versus pneumatic transmitters, Electronic type transmitters - temperature; Pressure (gauge); differential pressure; level(capacitive type); flow transmitter (magnetic); SMART /Intelligent transmitter; Block schematic and Comparison with conventional transmitter; applications of transmitters, Multivariable transmitter.	12	CO3
4	Process Control Valves & converters Need and specifications of Control Valve; Control valve terminology; Control valve constructional details; Air to Open(AO), Air to Close (AC); MOC (Material of construction); classification of control valve; applications, advantages, disadvantage of - Globe, Ball, Needle, Butterfly, Diaphragm, Pinch, Gate, Solenoid; Flow characteristics (Inherent and Installed); Valve positioners: necessity, types-motion balance and force- balance, Effect on Performance of control valve; Control Valve Actuators - Electrical, Pneumatic, Hydraulic, Electro-mechanical, and piston actuators; selection guidelines for control valve. Converters: Need for Converters and types, working of Pneumatic to Electrical and Electrical to Pneumatic converters.	14	CO4

5	 Industrial Control Components Panel Switches: Construction, symbolic representation, working, application of Toggle switches, Push buttons, Selector switches, DIP switches, Rotary switches, Thumbwheel switches, Drum switch, Limit switches, emergency push button, Tactile switch, Switch specifications. CAM SWITCHES MAGNETIC contactors, PILOT Light. Industrial switches: Temperature, Flow, Level and, Pressure Switch, Vibration switch. Control Relays: Construction, working, specifications, and applications of Electro-mechanical relay, Solid state relays. Interposing relays and Overload relays. Contactors/starters: Construction, working, specifications and applications of starters and contactors. Comparison between relays and starters /contactors. 	08	CO5
6	Auxiliary Process Control Components Alarm annunciators and its sequences; Temperature regulator, Flow regulator, stepper motor (working principle)	04	CO6

Internal Assessment:

Internal Assessment consists of two tests out of which, one should be compulsory class test (on minimum

02 Modules) and the other is either a class test or assignment on live problems or course project.

Theory Examination:

- 1. Question paper will comprise of 6 questions, each carrying 20 Marks.
- 2. Total 4 questions need to be solved.
- 3. Question No. 1 will be compulsory and based on entire syllabus wherein sub questions of 4 to 5 marks will be asked.
- 4. Remaining questions will be mixed in nature.
- 5. In question paper weight age of each module will be proportional to number of respective Lecture hours as mentioned in the syllabus.

ISL401	Process Contro Components - Lab				- 0	25	25		50
The course is aimed 1. To make students understand the construct application of various transducers used for measurement, pressure and vacuum measurement, pressure and vacuum measurement 2. To study electro-chemical sensors and transand viscosity measurement 3. To impart knowledge of different control of Hydraulic, Pneumatic and Electrical and the students to learn different production auxiliary process control components.							w measure ent, forc cers used om comp comparis	rement, s e, torque l for dens onents lik son.	train and ity ce
 Course Outcomes Course Outcomes On successful completion of course learner/student will be able to: Explain working principle of strain gauges, pressure transducers Learn Basic fundamentals of flow transducers identify types of flow and use different transducers for flow measurement. Explain the terminologies of electrochemical, density, humidity, p measurement sensors, and their applications in industry. Study, select and implement various pneumatic, hydraulic and electro-pneumatic system components and circuits. Apply knowledge to classify, select and use various Transmitter control valves and their accessories Describe the Need of Auxiliary process control components and study their industrial usage. 						flow y, pH itters,			

Syllabus: Same as that of Subject ISC402 Transducers-II and ISC405 Control System Components.

List of the Experiments:

Sr. No.	Detailed Contents	CO mapping
1.	Strain gauge characteristics and weight measurement	CO1
2.	Study use of semiconductor strain gauges for pressure measurement	CO1
3.	Study measurement of pressure using bellows, diaphragm, bourdon tube, manometer.	CO1
4.	Test and calibration of pressure gauges using dead weight tester.	CO1
5.	Measurement of flow using orifice/venturi tube/nozzle/pitot tube.	CO2
6.	Measurement of flow using rotameter/ electromagnetic flow meter.	CO2
7.	Study and characterization of pH meter/ conductivity meter.	CO3
8.	Measurement of Density/Viscosity	CO3
9.	Study of various pneumatic / hydraulic control system components.	CO4
10.	Study of various electro-pneumatic control system components.	CO4
11.	Study operation and calibration of flow/ level/ temperature transmitter	CO5
12	Study of different types of control valve actuator.	CO5
13	Calibration of I to P and / P to I converter.	CO5
14.	Study characteristics of control valve	CO5
15.	Study different types and operation of control valve and valve positioner.	CO6
16.	Study of pressure/temperature/level/flow switches and control relays.	CO6

Note:

1. Minimum of **Ten** experiments can be conducted during the semester for term work and practical examination.

3) Factory visit is advised to understand the working of the control system components.

4) Assignments based on syllabus which will help students to understand the Topic can be given during the semester as a support to Evaluate Term work.

Practical/Oral Examination:

Practical Examination will be based on performing one Experiment in the Laboratory from the List of Experiments given in the syllabus & the Oral Examination will be based on Entire subject.

Term Work:

Term work shall consist of minimum **Ten** Experiments covering all COs.

The distribution of marks for term work shall be as follows:

Laboratory work (Experiments/assignments)	: 10 Marks
Laboratory work (journal)	: 10 Marks
Attendance (class Room plus Lab Practice)	: 05 Marks

The final certification and acceptance of term work ensures the satisfactory performance of Laboratory work and minimum passing in the term work

Course Objectives	 The course is aimed To introduce the students the basic properties of OpAmp, analysis of electronic circuits using OpAmp. To give the knowledge about the various components and conditioning. To impart knowledge of design considerations of analog signal c of components. To give the students knowledge about various components di conditioning. To make the students capable to apply knowledge to desi transducer signal conditioning circuits. 	alog signal onditioning gital signal
Course Outcomes	 On successful completion of course learner/student will be able to Evaluate op-amp parameters and design of basic op-amp amplifi Design and Implement various linear applications using op-amp. Design and Implement various non-linear applications using op- Apply principles of analog signal conditioning for op-amp badesign. Apply concepts of digital signal conditioning for op-amp badesign. Design and develop signal conditioning circuits for different transmission. 	er circuits. -amp. ased circuit ased circuit

Syllabus: Same as that of Subject ISC403 Signal Conditioning Circuit Design.

List of Experiments:

Sr.	Detailed Contents	СО
No		Mapping
1.	Demonstrate use of Op-Amp as inverting and non-inverting amplifier	CO1
2.	Determination of opamp parameters- CMRR, Slew Rate, Offset Voltages & currents	CO1
3.	Adder and Subtractor using Op-amp	CO2
4.	Design Instrumentation Amplifier using 3 Op-amps.	CO2
5.	Design and demonstrate I to V and V to I converter circuit	CO2
6.	Design and implement Astable and Monostable Multivibrator using IC 555	CO2
7.	Implementation of Precision rectifiers using Op-amp.	CO3
8.	Design and demonstrate integrator and differentiator using Op-amp.	CO3
9.	Design of Wein bridge oscillator using Op-amp	CO3
10.	Design of RC phase shift oscillator using Op-amp	CO3
11.	Design and demonstrate second order LPF and HPF.	CO4
12.	Design and demonstrate general signal conditioning circuit to convert sensor output to 0-5 V	CO4
13.	Design and demonstrate general signal conditioning circuit to convert sensor output to 4-20 mA	CO4
14.	Design and demonstrate Analog to Digital converter circuit or Digital to Analog converter circuit	CO5
15.	Design and demonstrate signal conditioning circuit for weight measuring system using strain gauge	CO6
16.	Study and Simulation of Data Acquisition System	CO6
17.	Design signal conditioning circuit for RTD	CO6

Practical/Oral Examination:

Practical Examination will be based on performing one Experiment in the Laboratory from the List of Experiments given in the syllabus & the Oral Examination will be based on subject ISC403 Signal Conditioning Circuit Design.

Term Work:

Term work shall consist of minimum 08 experiments (any 5 Experiments from 1 to 10 plus any 3 experiments from remaining list of experiments) covering all COs and out of that 02 experiment should be simulation software.

The distribution of marks for term work shall be as follows:

Laboratory work (Experiments/assignments)	: 10 Marks
Laboratory work (journal)	: 10 Marks
Attendance (class Room plus Lab Practice)	: 05 Marks

The final certification and acceptance of term work ensures the satisfactory performance of Laboratory work and minimum passing in the term work.

ISL403	Feedback Control System- Lab	1
Course Objectives	 The course is aimed The students should be able to examine steady-state and frequency the Type 0, 1, and 2 systems. The students should be able to examine steady-state and frequency first and second order electrical systems. The students should able to examine time response analysis of first order systems. Students can be able to inspect stability analysis of system using Bode plot, polar plot. 	response of and second
Course Outcomes	 On successful completion of course learner/student will be able to Plot frequency response of first-order electrical system. Plot time response of second-order electrical system and calculate state error. Demonstrate the way to obtain the transfer function and validate to steady-state response using test signals such as step, ramp, and para Validate the effect of damping factor on response of second order s Inspect the time response specifications of systems by using root-lo Inspect the frequency response specifications of systems by using Polar plot, Nyquist-plot techniques, and comment on the stability of 	the steady- ransient and bolic. ystem. cus. g bode-plot,

Syllabus: Same as that of Subject ISC404 Feedback Control System.

List of the Laboratory Experiments:

Module	Contents	CO mapping
1.	To plot the effect of time constant on first – order systems response.	CO1
2.	To plot the frequency response of first-order system	CO1
3.	To plot the time response of second – order systems	CO2
4.	To examine steady state errors for Type 0, 1, 2 systems	CO3
5.	To study the block diagram reduction technique by using simulation software	CO3
6.	To interpret the effect of damping factor on the performance of second order system.	CO4
7.	To inspect the relative stability of systems by Root-Locus using Simulation Software	CO5
8.	To inspect the stability of systems by Bode plot using Simulation Software	CO6
9.	To determine the frequency response specifications from Polar plot of system	CO6
10.	To inspect the stability of systems by Nyquist plot using Simulation Software	CO6

Any other experiment based on syllabus which will help students to understand topic/concept.

Note: Sr. 1 to 4 experiments should be performed using practical kit /breadboard and Sr. 5 to 10 by using simulation software like MATH CAD/MATLAB/SCILAB/OCTAVE or equivalent.

Practical and Oral Examination:

Practical Examination will be based on performing one Experiment in the laboratory from the List of Experiments given in the syllabus & the Oral Examination will be based on subject **ISC404-** Feedback Control System.

Term Work:

Term work shall consist of minimum **<u>Eight</u>** experiments to cover all COs of this Lab Practice Course.

The distribution of marks for term work shall be as follows:

Laboratory work (Experiments/assignments)	: 10 Marks
Laboratory work (journal)	: 10 Marks
Attendance (class Room plus Lab Practice)	: 05 Marks

The final certification and acceptance of term work ensures the satisfactory performance of laboratory work and minimum passing in the term work.

Course Objectives	The course is aimed To study graphical programming language for creating simulation applications that interact with real-world data or signals in fields of engineering.	
Course Outcomes	 On successful completion of course learner/student will be able to 1. Design logical operations, using Graphical programming langu 2. Develop customized virtual instruments and represent them format with user friendly graphical programming software for I FOR LOOP, WHILE LOOP etc. 3. Plot the generated data and also able to export the data programming environment 4. Select the data acquisition card or simulated software module user interface in the field of engineering. 5. Describe the concepts of different analysis tool. 6. Design and develop real world applications using graphical prostimated programming environment 	age in required LOOPS like outside the e and make

out of 3 hours, 1 hours theory shall be taught to entire class and 2 hours practical in batches.

Prerequisite: Knowledge of Mathematics and conversion, LOOPs, switch CASE of any other software like C program, simple concept of proportional process control action.

Details of Syllabus:

Module	Contents	Hrs.	CO mapping
1	INTRODUCTION Virtual Instrumentation: Historical perspective, block diagram and Architecture of a virtual instrument, Conventional Instruments versus Virtual Instruments, data-flow techniques, graphical programming in data flow.	2	CO1
2	VI PROGRAMMING TECHNIQUES Data types, VIs and sub-VIs, Structures (For, While etc.) arrays, clusters, shift registers, case and sequence structures, formula nodes. Debugging techniques	2	CO2
3	PLOTING AND EXPORT DATA Strings, File I/O, Plotting data: graphs and charts, report generation.	2	CO3
4	DATA ACQUISITION Introduction to data acquisition on PC, Digital I/O, counters and timers, Software and Hardware installation, Calibration, Resolution, Data acquisition interface requirements, VISA programming.	3	CO4
5	MEASUREMENT ANALYSIS TOOLS Use of analysis tools for measurement of max, min, peak to peak voltage. Time period of signal, correlation methods. Design of oscilloscope, digital multimeter.	2	CO5
6	APPLICATIONS System development for a process. Development of Graphical User Interface (GUI). Implementation of various controllers (ON / OFF control, PID control) for a process. Simulation of a simple second order system.	2	CO6
List of Ex	periments:		
			CO

List of Experiments:

Module	Contents	CO mapping
1.	To develop a VI to calculate speed, convert degree Celsius to Fahrenheit	CO1
2.	To develop a Sub VI to implement Half adder and Full ADDER	CO2
3.	To develop VI using FOR and WHILE loop to add 10 numbers, calculate Factorial of a given number	CO2
4.	To create VI to find roots of quadratic equation, user defined unit conversions etc using case structure.	CO2
5.	To create VI student database using String control and Array and cluster functions.	CO2
6.	Applications of Graphical Programming Software in digital electronics—binary to decimal conversion etc.	CO1, CO2
7.	To develop a VI for storing all the points of simulated signal using File I/Os	CO3
8.	Build a VI to plot circle in XY graph, generate and plot random numbers on chart, different colors in an intensity graph etc with graph, chart properties and options.	CO3

University of Mumbai, Instrumentation Engineering, REV 2019 'C' Scheme

9.	Measurement of AC/ DC voltage and current using DAQ cards.	CO4
10.	Develop the VI, to On/Off the LED's using DAQ devices (Arduino, Raspberry Pi	CO4
10.	etc.)	
11.	Applications of Graphical Programming Software in process tank level /	CO5
11.	temperature control, alarm annunciator, batch process control etc.	
12.	To create VI to simulate bottle filling plant using Sequence structure.	CO5
13.	Applications of Graphical Programming Software in control —simulate first and	CO6
15.	second order system response, effect of damping factor etc.	
14	To create VI to simulate traffic light control, stirred tank heater etc. using	CO6
14.	Sequence structure	

Practical/Oral Examination:

Practical Examination will be based on performing one Experiment in the laboratory from the List of Experiments given in the syllabus & the Oral Examination will be based on subject ISL404 Virtual Instrumentation Lab.

Note:

- 1. Any other experiments based on syllabus which will help students to understand topic/concept can also be included.
- 2. For this course use Graphical Programming Software like LabVIEW or Open Source Software

Term Work:

Term work shall consist of minimum 10 programs from the list of suggested programs.

The distribution of marks for term work shall be as follows:

Laboratory work (Experiments/assignments)	: 10 Marks
Laboratory work (journal)	: 10 Marks
Attendance (class Room plus Lab Practice)	: 05 Marks

The final certification and acceptance of term work ensures the satisfactory performance of laboratory work and minimum passing in the term work.

ISM401	Mini Project – 1 B					
Course Objectives	The course is aimed 1. To acquaint with the process of identifying the needs and converting it into the problem.					
Course Objectives	 To familiarize the process of solving the problem in a group. To acquaint with the process of applying basic engineering fundamentalsto attempt solutions to the problems. To inculcate the process of self-learning and research. 					
Course Outcomes	 On successful completion of course learner/student will be able to Identify problems based on societal /research needs. Apply Knowledge and skill to solve societal problems in a group Develop interpersonal skills to work as member of a group or 14 Draw the proper inferences from available results through theo experimental/simulations. Analyse the impact of solutions in societal and environmental of sustainable development. Use standard norms of engineering practices Excel in written and oral communication. Demonstrate capabilities of self-learning in a group, which lead long learning. Demonstrate project management principles during project work 	ap. eader. retical/ context for ds to life				

Guidelines for Mini Project

- Students shall form a group of 3 to 4 students, while forming a group shall not be allowed less than three or more than four students, as it is a group activity.
- Students should do survey and identify needs, which shall be converted into problem statement for mini project in consultation with faculty supervisor/head of department/internal committee of faculties.
- Students hall submit implementation plan in the form of Gantt/PERT/CPM chart, which will cover weekly activity of mini project.
- A log book to be prepared by each group, wherein group can record weekly work progress, guide/supervisor can verify and record notes/comments.
- Faculty supervisor may give inputs to students during mini project activity; however, focus shall be on self-learning.
- Students in a group shall understand problem effectively, propose multiple solution and select best possible solution in consultation with guide/ supervisor.
- Students shall convert the best solution into working model using various components of their domain areas and demonstrate.
- The solution to be validated with proper justification and report to be compiled in standard format of University of Mumbai.
- With the focus on the self-learning, innovation, addressing societal problems and entrepreneurship quality development within the students through the Mini Projects, it is preferable that a single project of appropriate level and quality to be carried out in two semesters by all the groups of the students. i.e. Mini Project 1 in semester III and IV. Similarly, Mini Project 2 in semesters V and VI.
- However, based on the individual students or group capability, with the mentor's recommendations, if the proposed Mini Project adhering to the qualitative aspects mentioned above gets completed in odd semester, then that group can be allowed to work on the extension of the Mini Project with suitable improvements/modifications or a completely new project idea in even semester. This policy can be adopted on case by case basis.

Guidelines for Assessment of Mini Project:

Term Work

- The review/ progress monitoring committee shall be constituted by head of departments of each institute. The progress of mini project to be evaluated on continuous basis, minimum two reviews in each semester.
- In continuous assessment focus shall also be on each individual student, assessment based on individual's contribution in group activity, their understanding and response to questions.

• Distribution of Term work marks for both semesters shall be as below;

0	Marks awarded by guide/supervisor based on log book	: 10
0	Marks awarded by review committee	: 10
0	Quality of Project report	: 05

Review/progress monitoring committee may consider following points for assessment based on either one year or half year project as mentioned in general guidelines.

One-year project:

- In first semester entire theoretical solution shall be ready, including components/system selection and cost analysis. Two reviews will be conducted based on presentation given by students group.
 - First shall be for finalisation of problem
 - Second shall be on finalisation of proposed solution of problem.
- In second semester expected work shall be procurement of component's/systems, building of working prototype, testing and validation of results based on work completed in an earlier semester.
 - First review is based on readiness of building working prototype to be conducted.
 - Second review shall be based on poster presentation cum demonstration of working model in last month of the said semester.

Half-year project:

- In this case in one semester students' group shall complete project in all aspects including, Identification of need/problem
 - Proposed final solution
 - Procurement of components/systems
 - Building prototype and testing
- Two reviews will be conducted for continuous assessment,
 - First shall be for finalisation of problem and proposed solution
 - Second shall be for implementation and testing of solution.

Assessment criteria of Mini Project.

Mini Project shall be assessed based on following criteria;

- 1. Quality of survey/ need identification
- 2. Clarity of Problem definition based on need.
- 3. Innovativeness in solutions
- 4. Feasibility of proposed problem solutions and selection of best solution
- 5. Cost effectiveness
- 6. Societal impact
- 7. Innovativeness
- 8. Cost effectiveness and Societal impact
- 9. Full functioning of working model as per stated requirements
- 10. Effective use of skill sets
- 11. Effective use of standard engineering norms
- 12. Contribution of an individual's as member or leader
- 13. Clarity in written and oral communication
- In **one year, project**, first semester evaluation may be based on first six criteria's and remaining may be used for second semester evaluation of performance of students in mini project.
- In case of **half year project** all criteria's in generic may be considered for evaluation of performance of students in mini project.

Guidelines for Assessment of Mini Project Practical/Oral Examination:

- Report should be prepared as per the guidelines issued by the University of Mumbai.
- Mini Project shall be assessed through a presentation and demonstration of working model by the student project group to a panel of Internal and External Examiners preferably from industry or research organisations having experience of more than five years approved by head of Institution.
- Students shall be motivated to publish a paper based on the work in Conferences/students competitions.

Mini Project shall be assessed based on following points;

- 1. Quality of problem and Clarity
- 2. Innovativeness in solutions
- 3. Cost effectiveness and Societal impact
- 4. Full functioning of working model as per stated requirements
- 5. Effective use of skill sets
- 6. Effective use of standard engineering norms
- 7. Contribution of an individual's as member or leader
- 8. Clarity in written and oral communication
