CIRCULAR:-

A reference is invited to the syllabi relating to the Bachelor of Science (B.Sc) Degree Course <u>vide</u> this office Circular No.UG/367 of 2011, dated 25th October, 2011 and the Principals of the affiliated Colleges in Science, are hereby informed that the recommendation made by Board of Studies in Biochemistry at its meeting held on 3rd December, 2016 has been accepted by the Academic Council at its meeting held on 11th May, 2017 <u>vide</u> item 4.186 and that in accordance therewith, the revised syllabus as per the (CBCS) for the F.Y.B.Sc. (Biochemistry) Part-I (Sem-I & II) which is available on the University's website (<u>www.mu.ac.in</u>) and that the same has been brought into force with effect from the academic year 2017-18.

MUMBAI- 400032 aryJuly, 2017 To

The Principals of the affiliated Colleges in Science.

an July, 2017

REGISTRAR

(2)

Copy forwarded with Compliments for information to:-

- 1)The Co-ordinator, Faculty of Science,
- 2) The Offg. Director, Board of Examinations and Evaluation.
- 3) The Director, Board of Student Development.
- 4) The Chairperson, Ad-hoc Board of Studies in Life Science.
- 5) The Professor-cum-Director, Institute of Distance and Open Learning (IDOL).
- 6) The Co-Ordinator, University Computerization Centre.

REGISTRARPTO

UNIVERSITY OF MUMBAI

Syllabus for the F.Y.B.Sc. Program: B.Sc. Course: Biochemistry

(Credit Based Semester and Grading System with effect from the academic year 2017 – 2018)

Preamble

Biochemistry is central to all areas of the "biological" and "life" science. It aims to provide an understanding of every aspect of the structure and function of living things at cellular level. Being an interdisciplinary subject it is spanning a wide range of areas from microbiology to plant and animal sciences to pathology of diseases and nutrition.

The impact of studies in biochemistry on modern life is enormous. Therefore, the syllabus is structured to touch upon broad base at the beginning. Unique physical and chemical characteristics of water enable it to function in ways essential to human and other life processes due to its structure and composition. Life on Earth began more than 3 billion years ago, evolving from the most basic of microbes into a dazzling array of complexity over time, which makes it necessary to study the origin of life and evolution of a modern species over span of years. After an in-depth understanding of how the first cells originated, students are introduced to detailed structural organization of basic unit of a living system "The Cell". Biomolecules are the basic and important constituents of a living system. Hence, it is mandatory to study structure, occurrence and functions of large biomolecules like carbohydrates, lipids and proteins along with nucleic acids. In order to prepare the students for detailed course in Applied Nutrition in the higher education, the syllabus is made to understand human nutrition and its significance. In order to understand the biological processes occurring in the living body, processes as digestion, absorption, respiration and excretion are necessary to be studied. As stated earlier, life evolved from a small microbe, it is our aim to study living microscopic size organisms which includebacteria, fungi, protozoa and special type of microorganisms called extremophiles

Objectives of the first year of the course

- Develop an adequate background to enable the first year students to study more advanced biochemistry topics.
- Acquaint the learners with the unique properties of the universal solvent - water, essential for life processes.
- Understand the life constituting bio molecules: proteins, carbohydrates, lipids, nucleic acids.
- Familiarize the learners about the origin of life and take them through the process of evolution.
- Focus on Cell as the basic unit of life which is the center for all biochemical processes.
- Familiarize the learners to the world of microorganisms which exist as independent cellular units.
- Develop an interest in the learner in nutrition for sustaining life, and physiology and functioning of life systems.
- Appreciate the importance of the broad spectrum of biochemistry.
 - Provide familiarity with basic biochemistry laboratory techniques.
 - Develop the practical skills of students to enhance their observational skills and to use these skills for problem solving.

F. Y. B. Sc. Biochemistry Syllabus

Credit Based Semester and Grading System

To be implemented from the academic year 2017 - 2018

Semester I

Course Code	Unit	Topics	Credits	Lectures
Biomolecules and Nutrition				
USBCH101	I	Water	2	15
	II	Amino acids and proteins		15
		Carbohydrates	SC	15
Introduction cell biology, Physiology and Microbiology				
USBCH102	0	Origin of life and formation of cells	2	15
		The cell wall, cell membrane, cell organelles and cell division		15
		Microbiology I		15
USBCHP01		Practicals based on both courses in theory - USBCH101 and USBCH102	2	2

Semester II

Course Code	Unit	Topics	Credits	Lectures
Biomolecules and Nutrition				
USBCH201	Ι	Lipids	2	15
	II	Nucleic acids		15
		Nutrition		15
•.0				
Introduction cell biology, Physiology and Microbiology				
USBCH202	I	Physiology of digestion and	2	15
	0	absorption		
	Ĩ	Physiology of respiration and		15
		excretion		
Ô	II	Microbiology II		15
		Practicals based on both courses in		2
USBCHP02		theory - USBCH201 and USBCH202	2	

F.Y.B.Sc. Biochemistry Syllabus Restructured for Credit Based and Grading System to be implemented from the Academic year 2017 - 2018 Semester I

USBCH101 - Bio molecules and Nutrition

Course Code	Title	Credits	
USBCH101	Biomolecules and Nutrition	2 Credits (45 lectures)	
(surface te properties) 1.1.1 Entropy ar 1.1.2 Effect of no	effect on Biomolecules, hydrogen bonding and structure, properties nsion, latent heat, specific heat, viscosity, dilectric constant, colligative of water and their biological significance, water as a universal solvent. d dissolution of solute on polar compounds on the structure of water actions of biomolecules in aqueous solutions	15 Lectures	
1.3 <i>Ionization</i> 1.3.1 pH: pH sc 1.3.2 Weak acid 1.3.3 Buffers - c	of mole, molar, molar equivalent and normal, Dalton a of water, weak acids and weak bases ale, H ⁺ and OH ⁻ concentrations Is and bases and their dissociation constants Ka & Kb lefinition, action, physiological buffers - phosphate and carbonate tions. Only simple problems on solutions)	c	S
 2.1 Amino aci 2.1.1 Amino aci 2.1.2 Detailed c 2.1.3 Physical p melting po Chemical Edman's 2.2 Peptides 2.2.1 ASBC - A 2.2.2 Primary st 2.2.3 Secondary 2.2.4 Tertiary(not start st	d structure - D & L forms of all 20 amino acids lassification based on polarity, essential and non essential amino acid roperties: zwitter ions, pl of amino acids amino acids as ampholytes, bint, optical rotation, UV absorption and chemical properties: reactions of amino acids with Ninhydrin, Sanger's reagent, reagent and Dansyl chloride and Proteins PS classification on the basis of shape and function ructure - Formation and characterization of the peptide bond y structure - Alpha helix and beta sheet hyoglobin) and Quaternary(hemoglobin)structures - an introduction	15 Lectures	
(mono, olig 3.2 Monosacc 3.2.1 Classificat 3.2.2 Occurrenc and ribose 3.2.3 Properties a) Physica b) Chemica i) oxida	rdrates. Classification, and functions of carbohydrates go polysaccharides) charides on in terms of aldoses and ketoses e,structures and significance of glucose, fructose, galactose, mannose,	15 Lectures	
ii) redu (with iii) Osa	cing action in boiling alkali, enediol formation respect to glucose and fructose) zone formation (with respect to glucose and fructose). nol (with respect to ribose)		

3.3 Disaccharides

- 3.3.1 Occurrence and structure of maltose , lactose and sucrose
- 3.3.2 Formation of glycosidic bonds

3.4 Polysaccharides

- 3.4.1 Classification based on function. storage and structure
 - a) Composition: homo & hetero. with examples
 - b) Storage : starch and glycogen action of amylase on starch
 - c) Structural: cellulose, chitin

USBCH102 - Introduction to Cell biology, Physiology and Microbiology

Course Code	Title	Credits
USBCH102	JSBCH102 Introduction to Cell biology, Physiology and Microbiology	
Unit I: Origin of	Life & Formation of cells	15 Lectures
	eory, Theories on the origin of life: Abiogenesis, Heterotroph RNA world, protein world, Miller's experiment, Formation of the first cell, ont theory	C
Gene mutat evidences: l geographic generations	Darwinian theory, Modern synthetic theory of evolution and its factors: ions(recombination), heredity, natural selection and isolation Biological Fossil record, chemical and anatomicalsimilarities of related life forms, distribution of related species, genetic changes in living organisms over and Mechanism of evolution, Gene flow and genetic drift, berg principle	6
Unit II: The cell-	cell wall, cell membrane, cell organelles and cell division	15 Lectures
	o rganization of cells c, Eukaryotic (plant & animal) and yeast cells - a comparative overview	
	ructure (plant), cell membrane (fluid mosaic model) on: microtubules & microfilaments	
2.3.2 Chloroplas other plast 2.3.3 Ribosome.	rion: Organization & function of the mitochondria, mitochondrial genome t: Structure and function of the chloroplast. the chloroplast genome, tids <i>ER</i> : Golgi Structure & Function of Ribosome, ER, Golgi apparatus	
Lysosome 2.3.5 Nucleus: S	e & Lysosome: Peroxisome function & assembly (in brief) and structure and function tructure & function of the nucleus, nuclear envelope, nuclear pores, trix and Nucleolus	
2.4 Mitosis an	nd Meiosis	

Unit III: Microbiology I

- **3.1** Historical background (contributions of Leeuwenhoek. Pasteur ,etc) and general characteristics (size, shape and structure) of Bacteria
- **3.2** *Microbial Taxonomy*: Microbial species and strains. classification of bacteria based on morphology (shape and flagella), staining reaction. nutrition and extreme environment

15 Lectures

- **3.3 Bacterial cell wall:** Structure and function, components of peptidoglycan frame work (structures of NAG and NAMA not necessary)
- **3.4** *An introduction to extremophiles:* thermophiles, psychrophiles, halophiles, magnetotactic, radiation resistant examples with their application
- **3.5** Staining methods (principles of staining & types or stains) and microscopic identification of bacteria

SEMESTER I - USBCHP01

PRACTICAL – I

- Preparation & Standardisation of laboratory reagents Primary standards - 0.1N oxalic acid Secondary standards - 0.1N NaOH, 0.1N HCI
- 2. Preparation of buffers acetate and phosphate
- 3. Determination of pKa of acetic acid
- 4. Qualitative tests for Carbohydrates -
 - Monosaccharides (glucose and fructose),
 - Disaccharides (lactose ,maltose and sucrose)
 - Polysaccharides (starch and dextrin)
 - unknown
- 5. Qualitative test for amino acids
- 6. Effect of heat, organic solvents and ammonium sulphate on proteins

DEMONSTRATION EXPERIMENT

pH meter - working of a pH meter

PRACTICAL – II

- 1. Effect of isotonic, hypertonic and hypotonic solutions on cells onion peel
- 2. Staining of bacterial yeast cells (negative staining)
- Staining techniques-
 - gram staining,
 - endospore,
 - capsule and
 - lipids
- 4. Permanent slides/ diagrams or electron micrograph of organelles-nucleus, mitochondria and chloroplast
- 5. Study of stages of mitosis using onion root tips
- 6. Permanent slides of mitosis and meiosis

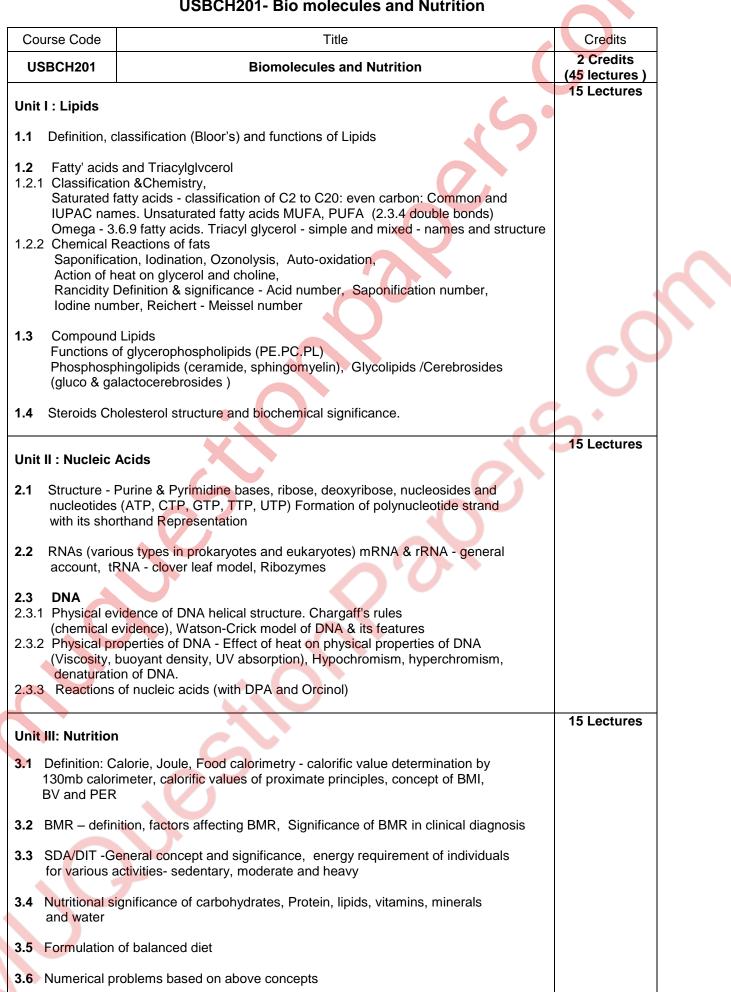

DEMONSTRATION EXPERIMENT

1. Microscopy - study of a compound microscope

45 Lectures hours

45 Lectures

Semester II USBCH201- Bio molecules and Nutrition

USBCH202 - Introduction to Cell biology, Physiology and Microbiology

Course Code	Title	Credits
USBCH202	Introduction to Cell biology, Physiology and Microbiology	2 Credits (45 lectures) 15 Lectures
Unit I: Physiolog	gy of digestion and absorption	15 Lectures
1.1 Parts and Fu	Inctions of gastro intestinal tract (GIT)	•
	Glands associated with GIT and Juices of GIT (Saliva, Gastric juice, Intestinal juice, pancreatic e)	
1.3 Digestion an	d Absorption of carbohydrates	
1.4 Digestion an	d Absorption of Lipids	
1.5 Digestion an	d Absorption of Proteins	
1.6 Disorders - F	Peptic ulcer, Lactose Intolerance	
Unit II : Physiolo	ogy of respiration and excretion	15 Lectures
2.1 Respiratory	v system,	
2.2 Breathing -	inspiration and expiration,	
2.3 Compositio	n of air and partial pressure of gases	
2.4.1 Transport 0 2.4.2 Transport 0		
function, (Renal tubu Henle's loc 2.5.2 Urine forma	of the nephron: Bowman's capsule & glomerulus - Structure & ultrafiltration, pressures involved, GFR, regulation of GFR); le - structure & function (proximal and distal convoluted tubules and p) ation: Reabsorption / Secretion of glucose, Na+, K+. HCO3 : renal threshold, Excretory disorder: Nephritis	
Unit III: Microbio	ology II	15 Lectures
	rowth - Growth Curve, Mathematical expression, Synchronous neration time	
3.2 Culture med	lia (N, C, Special requirements), Natural and Synthetic media	
3.3 Sterilization	and Disinfection techniques	
Autoclave),	gent of sterilization - Temperature- Pressure (Hot Air Oven, Radiations (UV, Gamma) (examples with mechanism) agents of sterilization - Alcohol, Halogens, Formaldehyde	
		<u> </u>

SEMESTER II – USBCHP02

45 Lecture

hours

45 Lecture hours

PRACTICAL - I

1. Qualitative tests for lipids

- a) Miscibility test
- b) Saponification test
- c) Unsaturation test
- d) Sudan black dye test
- e) Salkowski test for cholesterol
- 2. Determination of SAP value of given oil sample
- 3. Determination of Acid value of give oil sample
- 4. Staining of DNA and RNA (methyl green: pyronine) using onion peel
- 5. Qualitative tests for DNA (DPA) & RNA (Orcinol) (Neumann's test for presence of phosphorus) -
- 6. Estimation of Calcium by oxalate method
- 7. Qualitative analysis for Proteins (albumin, peptone, gelatine and casein any four proteins)

SEMESTER II

PRACTICAL - II

- 1. Identification of organs / parts of digestive system
- 2. Identification of organs / parts of respiratory system
- 3. Identification of organs / parts of excretory system
- 4. Analysis of the action of salivary α amylase action on starch
- Concept of Dialysis: Ammonium sulphate precipitation → Dialysis (Test with BaCl₂ for presence of sulphate in the buffer or water outside)
- 6. Estimation of total acidity of gastric juice
- 7. Urine analysis:
 - Inorganic constituents: SO₄⁻² (BaCl₂), Cl⁻ (AgNO₃), Na⁺, K⁺ (Flame test)
 - Organic constituents: Urea, Uric acid, Creatinine
 - Abnormal constituents glucose by Benedicts method, proteins by Hellers ring test

Scheme of Examination:

Semester end assessment: It is defined as the assessment of the learners on thebasis of performance in the semester end theory/ written/ practical examination.

a) Theory	100 marks
Question Paper Pattern for Semesters I & II (100 marks)	3hrs
Q1) Objective questions based on all units with no internal options:	20 marks
 a) Define the following (10 marks) : (Provide 5 terms to be defined, eac definition will carry 2 marks) b) True or False with reasons (10 marks): (Provide 5 statements, for ea has to state whether it is true or false and provide reasons.) 	
Q2) Questions based on Unit I	20 marks
(either answer any 4 out of 8 sub-questions OR any 2 out of 4)	
Q 3) Questions based on Unit II	20 marks
(either answer any 4 out of 8 sub-questions OR any 2 out of 4)	
Q4) Questions based on Unit III	20 marks
(either answer any 4 out of 8 sub-questions OR any 2 out of 4)	
Q 5) Questions based on Units I,II,III (Answer 4 out of 6 sub-questions)	20 marks
b) Practicals 50 marks	0

Practical External Assessment

The Course having Practical training will have Practical Examination 20 marks for 50 marks at theend of Semester, out of which 30 marks for the Practical task assigned at the time of examination.

The 20 marks are allotted as Internal Assessment.

Sr. No	Evaluation type	Marks
1	Two best practicals	10
2	Journal	05
3	Viva	05

30 marks
