

University of Mumbai

No. AAMS(UG)/88 of 2021-22

CIRCULAR:-

Attention of the Principals of the Affiliated Colleges and Directors of the Recognized Institutions in Faculty of Science & Technology is invited to this office circular No. UG/18 of 2016-17, dated 27th June, 2016 relating to the revised syllabus as per the (CBSGS) of F.Y.B.Sc. (Computer Science) (Sem. I & II).

They are hereby informed that the recommendations made by the Ad-hoc Board of Studies in Computer Science at its meeting held on 21st June, 2021 and subsequently passed by the Board of Deans at its meeting held on 28th June, 2021 vide item No. 6.38 (R) have been accepted by the Academic Council at its meeting held on 29th June, 2021 vide item No.6.38 (R) and that in accordance therewith, the revised syllabus as per the (CBSGS) for the F.Y.B.Sc. Computer Science (Sem. I & II) has been brought into force with effect from the academic year 2021-22 accordingly. (The same is available on the University's website www.mu.ac.in).

MUMBAI - 400 032
30th September, 2021

(Dr. B.N. Gaikwad)
I/c REGISTRAR

To

The Principals of the Affiliated Colleges and Directors of the Recognized Institutions in Faculty of Science & Technology.

A.C/6.38 (R) 29/06/2021

No. AAMS(UG)/88 -A of 2021-22

MUMBAI-400 032

30th September, 2021

Copy forwarded with Compliments for information to:-

- 1) The Dean, Faculty of Science & Technology,
- 2) The Chairman, Ad-hoc Board of Studies in Computer Science,
- 3) The Director, Board of Examinations and Evaluation,
- 4) The Director, Board of Students Development,
- 5) The Co-ordinator, University Computerization Centre,

(Dr. B.N. Gaikwad)
I/c REGISTRAR

Copy to :-

- 1. The Deputy Registrar, Academic Authorities Meetings and Services (AAMS),**
- 2. The Deputy Registrar, College Affiliations & Development Department (CAD),**
- 3. The Deputy Registrar, (Admissions, Enrolment, Eligibility and Migration Department (AEM),**
- 4. The Deputy Registrar, Research Administration & Promotion Cell (RAPC),**
- 5. The Deputy Registrar, Executive Authorities Section (EA),**
- 6. The Deputy Registrar, PRO, Fort, (Publication Section),**
- 7. The Deputy Registrar, (Special Cell),**
- 8. The Deputy Registrar, Fort/ Vidyanagari Administration Department (FAD) (VAD), Record Section,**
- 9. The Director, Institute of Distance and Open Learning (IDOL Admin), Vidyanagari,**

They are requested to treat this as action taken report on the concerned resolution adopted by the Academic Council referred to in the above circular and that on separate Action Taken Report will be sent in this connection.

- 1. P.A to Hon'ble Vice-Chancellor,**
- 2. P.A Pro-Vice-Chancellor,**
- 3. P.A to Registrar,**
- 4. All Deans of all Faculties,**
- 5. P.A to Finance & Account Officers, (F.& A.O),**
- 6. P.A to Director, Board of Examinations and Evaluation,**
- 7. P.A to Director, Innovation, Incubation and Linkages,**
- 8. P.A to Director, Board of Lifelong Learning and Extension (BLLE),**

UNIVERSITY OF MUMBAI

Syllabus

For the

Program: F.Y.B.Sc. Sem -I &II CBCS

Course: Computer Science

**(Choice Based and Credit System with effect from the
academic year 2021-22)**

UNIVERSITY OF MUMBAI**Syllabus for Approval**

Sr. No.	Heading	Particulars
1.	Title of the Course	F.Y.B.Sc. Sem. I & II (Computer Science)
2.	Eligibility for Admission	Ordinance no. O.5719 Circular no. UG/284 of 2007 dated 16 th June 2007
3.	Passing Marks	40%
4.	Ordinances / Regulations (if, any)	As applicable for all B.Sc. Courses
5.	Number of years / Semesters	Three years – Six Semesters
6.	Level	P.G./ U.G. /Diploma / Certificate (Strike out which is not applicable)
7.	Pattern	Yearly/ Semester, Choice Based (Strike out which is not applicable)
8.	Status	New /Revised
9.	To be implemented from Academic year	From the Academic Year <u>2021 – 2022</u>

Date: 28/06/2021

Dr. Jagdish Bakal
BoS Chairperson in Computer Science

Dr. Anuradha Majumdar
Dean, Science and Technology

Preamble

The rise of Information and Communication Technology (ICT) has profoundly affected modern society. Increasing applications of computers in almost all areas of human endeavor has led to vibrant industries with concurrent rapid change in technology.

As the computing field advances at a rapid pace, the students must possess a solid foundation that allows and encourages them to maintain relevant skills as the field evolves. Specific languages and technology platforms change over time. Thus students must continue to learn and adapt their skills throughout their careers. To develop this ability, students will be exposed to multiple programming languages, tools, paradigms and technologies as well as the fundamental underlying principles throughout this programme.

The programme offers required courses such as programming languages, data structures, computer architecture and organization, algorithms, database systems, operating systems, and software engineering; as well as specialized courses in artificial intelligence, computer-based communication networks, distributed computing, information security, graphics, human-computer interaction, multimedia, scientific computing, web technology, and other current topics in computer science.

The core philosophy of this programme is to –

- Form strong foundations of Computer Science
- Nurture programming, analytical & design skills for the real world problems.
- Introduce emerging trends to the students in gradual way.
- Groom the students for the challenges of ICT industry

The students these days not only aspire for a career in the industry but also look for research opportunities. The main aim of this programme is to deliver a modern curriculum that will equip graduates with strong theoretical and practical backgrounds to enable them to excel in the workplace and to be lifelong learners. Not only does it prepare the students for a career in Software industry, it also motivates them towards further studies and research opportunities. Graduating students, can thus take up postgraduate programmes in CS leading to research as well as R&D, can be employable at IT industries, or can adopt a business management career.

In the first year i.e. for semester I & II, basic foundation of important skills required for software development is laid. The syllabus proposes to have four core subjects of Computer science and two core courses of Mathematics-Statistics. All core subjects are proposed to have theory as well as practical tracks. While the Computer Science courses will form fundamental skills for solving computational problems, the Mathematics & Statistics course will inculcate research-oriented acumen. Ability Enhancement Courses on Soft Skill Development will ensure an overall and holistic development of the students. The syllabus design for further semesters encompasses more advanced and specialized courses of Computer Science.

We sincerely believe that any student taking this programme will get very strong foundation and exposure to basics, advanced and emerging trends of the subject. We hope that the students' community and teachers' fraternity will appreciate the treatment given to the courses in the syllabus.

We wholeheartedly thank all experts who shared their valuable feedbacks and suggestions in order to improvise the contents; we have sincerely attempted to incorporate each of them. We further thank Chairperson and members of Board of Studies for their confidence in us.

Special thanks to Department of Computer Science and colleagues from various colleges, who volunteered or have indirectly, helped designing certain specialized courses and the syllabus as a whole.

Programme Structure for B.Sc. Computer Science

Programme Duration	06 Semesters <i>spread across 3 years</i>
Total Credits required for successful completion of the Course	120
Credits required from the Core Courses	76
Credits required for the Ability Enhancement Courses	04
Credits required for Skills Enhancement Courses	32
Credits for General Elective Courses	08
Minimum Attendance per Semester	75%

Programme Objectives

The objectives of the 3 year B.Sc. Computer Science programme are as follows:

- To develop an understanding and knowledge of the basic theory of Computer Science with good foundation on theory, systems and applications.
- To foster necessary skills and analytical abilities for developing computer based solutions of real-life problems.
- To provide training in emergent computing technologies which lead to innovative solutions for industry and academia.
- To develop the necessary study skills and knowledge to pursue further post-graduate study in computer science or other related fields.
- To develop the professional skillset required for a career in an information technology oriented business or industry.
- To enable students to work independently and collaboratively, communicate effectively, and become responsible, competent, confident, insightful, and creative users of computing technology

Programme Learning Outcomes

At the end of three year Bachelor of Computer Science the students will be able:

- To formulate, to model, to design solutions, procedure and to use software tools to solve real world problems.
- To design and develop computer programs/computer -based systems in the areas such as networking, web design, security, cloud computing, IoT, data science and other emerging technologies.
- To familiarize with the modern-day trends in industry and research based settings and thereby innovate novel solutions to existing problems.
- To apply concepts, principles, and theories relating to computer science to new situations.
- To use current techniques, skills, and tools necessary for computing practice
- To apply standard Software Engineering practices and strategies in real-time software project development
- To pursue higher studies of specialization and to take up technical employment.
- To work independently or collaboratively as an effective team member on a substantial software project.
- To communicate and present their work effectively and coherently.
- To display ethical code of conduct in usage of Internet and Cyber systems.
- To engage in independent and life-long learning in the background of rapid changing IT industry.

Semester I

Course Code	Course Title	Credits	Lectures /Week
USCS101	Digital Systems & Architecture	2	3
<p>About the Course: This course introduces the principles of computer organization and the basic architecture concepts. The course emphasizes performance and cost analysis, instruction set design, pipelining, memory technology, memory hierarchy, virtual memory management, and I/O systems.</p>			
<p>Course Objectives:</p> <ul style="list-style-type: none"> <input type="checkbox"/> To have an understanding of Digital systems and operation of a digital computer. <input type="checkbox"/> To learn different architectures & organizations of memory systems, processor organization and control unit. <input type="checkbox"/> To understand the working principles of multiprocessor and parallel organization's as advanced computer architectures 			
<p>Learning Outcomes: After successful completion of this course, students would be able to</p> <ul style="list-style-type: none"> <input type="checkbox"/> To learn about how computer systems work and underlying principles <input type="checkbox"/> To understand the basics of digital electronics needed for computers <input type="checkbox"/> To understand the basics of instruction set architecture for reduced and complex instruction sets <input type="checkbox"/> To understand the basics of processor structure and operation <input type="checkbox"/> To understand how data is transferred between the processor and I/O devices 			
Unit	Topics	No of Lectures	
I	<p>Fundamentals of Digital Logic: Boolean algebra, Logic Gates, Simplification of Logic Circuits: Algebraic Simplification, Karnaugh Maps. Combinational Circuits: Adders, Mux, De-Mux, Sequential Circuits: Flip-Flops (SR, JK & D), Counters: synchronous and asynchronous Counter</p> <p>Computer System: Comparison of Computer Organization & Architecture, Computer Components and Functions, Interconnection Structures. Bus Interconnections, Input / Output: I/O Module, Programmed I/O, Interrupt Driven I/O, Direct Memory Access</p>	15	
II	<p>Memory System Organization: Classification and design parameters, Memory Hierarchy, Internal Memory: RAM, SRAM and DRAM, Interleaved and Associative Memory. Cache Memory: Design Principles, Memory mappings, Replacement Algorithms, Cache performance, Cache Coherence. Virtual Memory, External Memory: Magnetic Discs, Optical Memory, Flash Memories, RAID Levels</p> <p>Processor Organization: Instruction Formats, Instruction Sets, Addressing Modes, Addressing Modes Examples with Assembly Language [8085/8086 CPU], Processor Organization, Structure and Function. Register</p>	15	

	Organization, Basic Microprocessor operations: Data Transfer (Register / Memory) Operations, Arithmetic & Logical Operations, Instruction Cycle, Instruction Pipelining. Introduction to RISC and CISC Architecture, Instruction Level Parallelism and Superscalar Processors: Design Issues	
III	Control Unit: Micro-Operations, Functional Requirements, Processor Control, Hardwired Implementation, Micro-programmed Control. Fundamentals of Advanced Computer Architecture: Parallel Architecture: Classification of Parallel Systems, Flynn's Taxonomy, Array Processors, Clusters, and NUMA Computers. Multiprocessor Systems: Structure & Interconnection Networks, Multi-Core Computers: Introduction, Organization and Performance.	15

Course Code	Course Title	Credits	Lectures /Week
USCSP101	Digital Systems & Architecture – Practical	1	3
1	Study and verify the truth table of various logic gates (NOT, AND, OR, NAND, NOR, EX-OR, and EX-NOR).		
2	Simplify given Boolean expression and realize it.		
3	Design and verify a half/full adder		
4	Design and verify half/full subtractor		
5	Design a 4 bit magnitude comparator using combinational circuits.		
6	Design and verify the operation of flip-flops using logic gates.		
7	Verify the operation of a counter.		
8	Verify the operation of a 4 bit shift register		
9	Design and implement expression using multiplexers / demultiplexers.		
10	Design and implement 3-bit binary ripple counter using JK flip flops.		
11	Simple microprocessor programs for data transfer operations		
12	Simple microprocessor programs for arithmetic & logical transfer operations		
Note	Practical 1 – 10 can be performed using any open source simulator (like Logisim) (Download it from https://sourceforge.net/projects/circuit/) Practical 11 – 12 can be performed on any simulation software like Jubin's 8085 simulator		

Course Code	Course Title	Credits	Lectures /Week
USCS102	Introduction to Programming with Python	2	3
<p>About the Course: This course is aims at introducing one of the fastest growing programming language of current time and enables learners to understand the fundamentals of programming with Python. Learners will be able to write programs to solve real-world problems, and produce quality code. It will help to develop strong skills of programming for implementing applications for emerging fields including data science and machine learning.</p>			
<p>Course Objectives:</p> <ul style="list-style-type: none"> <input type="checkbox"/> To learn how to design and program Python applications. <input type="checkbox"/> To explore the innards of Python Programming and understand components of Python Program <input type="checkbox"/> To define the structure and components of a Python program. <input type="checkbox"/> To learn how to write loops and decision statements in Python <input type="checkbox"/> To learn about inbuilt input/output operations and compound data types in Python 			
<p>Learning Outcomes: After successful completion of this course, students would be able to:</p> <ul style="list-style-type: none"> <input type="checkbox"/> Ability to store, manipulate and access data in Python <input type="checkbox"/> Ability to implement basic Input / Output operations in Python <input type="checkbox"/> Ability to define the structure and components of a Python program. <input type="checkbox"/> Ability to learn how to write loops and decision statements in Python. <input type="checkbox"/> Ability to learn how to write functions and pass arguments in Python. <input type="checkbox"/> Ability to create and use Compound data types in Python 			
Unit	Topics	No of Lectures	
I	<p>Overview of Python: History & Versions, Features of Python, Execution of a Python Program, Flavours of Python, Innards of Python, Python Interpreter, Memory Management in Python, Garbage Collection in Python, Comparison of Python with C and Java, Installing Python, Writing and Executing First Python Program, Getting Help, IDLE</p> <p>Data Types, Variables and Other Basic Elements: Comments, Docstrings, Data types- Numeric Data type, Compound Data Type, Boolean Data type, Dictionary, Sets, Mapping, Basic Elements of Python, Variables</p> <p>Input and Output Operations: Input Function, Output Statements, The print() function, The print(“string”) function, The print(variables list) function, , The print(object) function, The print(formatted string) function, Command Line Arguments</p> <p>Control Statements: The if statement, The if ... else Statement, The „if ...</p>	15	

	elif ... else" Statement, Loop Statement- while loop, for loop, Infinite loop, Nested loop, The else suite, break statement, continue statement, pass statement, assert statement, return statement	
II	<p>Operators: Arithmetic operators, Assignment operators, Unary minus operator, Relational operators, Logical operators, Bitwise operators, Membership operators, Identity operators, Precedence of Operators, Associativity of Operators</p> <p>Arrays: Creating Arrays, Indexing and Slicing of Arrays, Basic Array Operations, Arrays Processing, Mathematical Operations on Array, Aliasing Arrays, Slicing and Indexing in NumPy Arrays, Basic slicing, Advanced Indexing, Dimensions of Arrays, Attributes of an Array, The ndim Attribute, The shape Attribute, The size Attribute, The itemsize Attribute</p> <p>Functions: Function definition and call, Returning Results, Returning Multiple Values from a Function, Built-in Functions, Difference between a Function and a Method, Pass Value by Object Reference, Parameters and Arguments, Formal and Actual Arguments, Positional Arguments, Keyword Arguments, Default Arguments, Arbitrary Arguments, Recursive Functions, Anonymous or Lambda Functions, Using Lambda with the filter() Function, Using Lambda with the map() Function, Using Lambda with the reduce() Function</p> <p>Modules: Introduction to Modules in Python</p>	15
III	<p>Strings: Creating Strings, Functions of Strings, Working with Strings, Length of a String, Indexing and Slicing, Repeating and Concatenating Strings, Checking Membership, Comparing Strings, Removing Spaces, Finding Substrings, Counting Substrings, Immutability, Splitting and Joining Strings, Changing Case, Checking Starting and Ending of a String, Sorting Strings, Searching in the Strings, Testing Methods, Formatting Strings, Finding the Number of Characters and Words, Inserting Substrings into a String</p> <p>List and Tuples: Lists, List Functions and Methods, List Operations, List Slices, Nested Lists, Tuples, Functions in Tuple</p> <p>Dictionaries: Creating a Dictionary, Operators in Dictionary, Dictionary Methods, Using for Loop with Dictionaries, Operations on Dictionaries, Converting Lists into Dictionary, Converting Strings into Dictionary, Passing Dictionaries to Functions, Sorting the Elements of a Dictionary using Lambda, Ordered Dictionaries</p>	15
<p>Textbooks:</p> <ol style="list-style-type: none"> 1. Practical Programming: An Introduction to Computer Science Using Python 3, Paul Gries , Jennifer Campbell, Jason Montojo, Pragmatic Bookshelf, 2nd Edition, 2014 2. Programming through Python, M. T Savaliya, R. K. Maurya & G M Magar, Sybgen Learning India, 2020

Course Code	Course Title	Credits	Lectures /Week
USCSP102	Introduction to Programming with Python – Practical	1	3
1	Write a program to design and develop python program to implement various control statement using suitable examples		
2	Write program in Python to define and call functions for suitable problem.		
3	Write Python program to demonstrate different types of function arguments.		
4	Write a Python program to demonstrate the precedence and associativity of operators.		
5	Write suitable Python program to implement recursion for problems such as Fibonacci series, Factorial, Tower of Hanoi etc.		
6	Write Python program to implement and use lambda function in python		
7	Write a python program to create and manipulate arrays in Python. Also demonstrate use of slicing and indexing for accessing elements from the array.		
8	Write a program to implement list in Python for suitable problem. Demonstrate various operations on it.		
9	Write a program to implement tuple in Python for suitable problem. Demonstrate various operations on it.		
10	Write a program to implement dictionary in Python for suitable problem. Demonstrate various operations on it.		

Course Code	Course Title	Credits	Lectures /Week
USCS103	LINUX Operating System	2	3
<p>About the Course: This syllabus will help to train students in fundamental skills and build-up sustainable interest in Linux Operating System. It will improve necessary knowledge base to understand Linux Operating System and its practical implementation, it will also help to develop Linux based solutions for real life problems.</p>			
<p>Course Objectives:</p> <ul style="list-style-type: none"> <input type="checkbox"/> To learn basic concepts of Linux in terms of operating system <input type="checkbox"/> To learn use of various shell commands with regular expressions <input type="checkbox"/> To set Linux Environment variables and learn setting file permissions to maintain Linux security implementation <input type="checkbox"/> To learn various editors available in Linux OS <input type="checkbox"/> To learn shell scripting. <input type="checkbox"/> To learn installation of compilers and programming using C and Python languages on Linux platform 			
<p>Learning Outcomes: After successful completion of this course, students would be able to</p> <ul style="list-style-type: none"> <input type="checkbox"/> Work with Linux file system structure, Linux Environment <input type="checkbox"/> Handle shell commands for scripting, with features of regular expressions, redirections <input type="checkbox"/> Implement file security permissions <input type="checkbox"/> Work with vi, sed and awk editors for shell scripting using various control structures <input type="checkbox"/> Install softwares like compilers and develop programs in C and Python programming languages on Linux Platform 			
Unit	Topics	No of Lectures	
I	<p>Linux operating system and Basics : History, GNU Info and Utilities, Various Linux Distributions, The Unix/Linux architecture, Features of Unix/Linux, Starting the shell, Shell prompt, Command structure, File Systems and Directory Structure, man pages, more documentation pages</p> <p>Basic Bash shell commands: General purpose utility Commands, basic commands, Various file types, attributes and File handling Commands, Handling Ordinary Files. More file attributes</p> <p>Advanced Bash shell commands: Simple Filters, Filters using regular expressions.</p> <p>The Linux environment variable: Setting, Locating and removing environment variables like PATH etc, Default shell environment variables, Using command aliases.</p>	15	

II	<p>Understanding Linux file permission: Linux security, Using Linux groups, Decoding file permissions, Changing security setting, Sharing files.</p> <p>Linux Security: Understanding Linux Security, uses of root, sudo command, working with passwords, Understanding ssh.</p> <p>Networking: TCP/IP Basics, TCP/IP Model, Resolving IP addresses, Applications, ping, telnet, ftp, DNS</p> <p>Working with Editors: awk, sed and Introduction to vi</p>	15
III	<p>Basic script building: Using multiple commands, Creating script files, Displaying messages, Using variables, Redirecting Input and Output, Pipes performing math, Exiting the script.</p> <p>Using structured commands: Working with if-then, if-then-else and nested if statements, test command, Compound condition testing, while command, until command, case command.</p> <p>Script and Process control : Handling signals, Running scripts in background mode, Running scripts without a console, Job control, Job scheduling commands: ps, nice, renice, at, batch, cron table, Running the script at boot</p>	15
<p>Textbooks:</p> <ol style="list-style-type: none"> 1. “Linux Command line and Shell Scripting Bible”, Richard Blum, Wiley India. 2. “Unix: Concepts and Applications”, Sumitabha Das, 4th Edition, McGraw Hill. 3. “Official Ubuntu Book”, Matthew Helmke& Elizabeth K. Joseph with Jose Antonio Rey and Philips Ballew, 8th Ed. <p>Additional References:</p> <ol style="list-style-type: none"> 1. “Linux Administration: A Beginner's Guide”, Fifth Edition, Wale Soyinka, Tata McGraw-Hill, 2008. 2. “Linux: Complete Reference”, Richard Petersen, 6th Edition, Tata McGraw-Hill 3. “Beginning Linux Programming”, Neil Mathew, 4th Edition, Wiley Publishing, 2008. 		

Course Code	Course Title	Credits	Lectures /Week
USCSP103	LINUX Operating System – Practical	1	3
1	<p>Installation of Ubuntu Linux operating system.</p> <ol style="list-style-type: none"> a) Booting and Installing from (USB/DVD) b) Using Ubuntu Software center / Using Synaptic c) Explore useful software packages. 		
2	<p>Becoming an Ubuntu power user</p> <ol style="list-style-type: none"> a) Administering system and User setting b) Learning Unity keyboard c) Using the Terminal d) Working with windows programs 		

3	<p>File System Commands: touch, help, man, more, less, pwd, cd, mkdir, rmdir, ls, find, ls, etc</p> <p>File handling Commands: cat, cp, rm, mv, more, file, wc, od, cmp, diff, comm, chmod, chown, chgrp, gzip and gunzip, zip and unzip, tar, ln, umask, chmod, chgrp, chown, etc</p>
4	<p>General purpose utility Commands: cal, date, echo, man, printf, passwd, script, who, uname, tty, stty, etc</p> <p>Simple Filters and I/O redirection: head, tail, cut paste, sort, grep family, tee, uniq, tr, etc.</p> <p>Networking Commands: who, whoami, ping, telnet, ftp, ssh, etc</p>
5	Editors: vi, sed, awk
6	Working and Managing with processes- sh, ps, kill, nice, at and batch etc.
7	Shell scripting I: Defining variables, reading user input, exit and exit status commands, , expr, test, [], if conditional, logical operators
8	Shell scripting II: Conditions (for loop, until loop and while loop) arithmetic operations, examples
9	Shell scripting III: Redirecting Input / Output in scripts, creating your own Redirection
10	Installation of C/C++/Java/Python Compiler and creating an environment for app development. Basic programming using C and Python Languages.

Course Code	Course Title	Credits	Lectures /Week
USCS104	Open Source Technologies	2	3
<p>About the Course: Open Source Software is becoming an important resource for development, especially in developing countries. A working understanding of the economic and technical background of the Free / Open Source Software movement (FOSS) is essential for its effective use. The course takes students through the history and current status of the FOSS world, and starts them exploring it, by connecting their personal experiences with corresponding FOSS projects. Students will experience finding and using Open Source Software projects.</p>			
<p>Course Objectives:</p> <ul style="list-style-type: none"> <input type="checkbox"/> Understand the difference between open-source software and commercial software. <input type="checkbox"/> Understand the policies, licensing procedures and ethics of FOSS. <input type="checkbox"/> Understand open-source philosophy, methodology and ecosystem. <input type="checkbox"/> Awareness with Open-Source Technologies. 			
<p>Learning Outcomes:</p> <ul style="list-style-type: none"> <input type="checkbox"/> Differentiate between Open Source and Proprietary software and Licensing. <input type="checkbox"/> Recognize the applications, benefits and features of Open-Source Technologies <input type="checkbox"/> Gain knowledge to start, manage open-source projects. 			
Unit	Topics	No of Lectures	
I	<p>Introduction to Open-Source: Open Source, Need and Principles of OSS, Open-Source Standards, Requirements for Software, OSS success, Free Software, Examples, Licensing, Free Vs. Proprietary Software, Free Software Vs. Open-Source Software, Public Domain. History of free software, Proprietary Vs Open-Source Licensing Model, use of Open-Source Software, FOSS does not mean no cost. History: BSD, The Free Software Foundation and the GNU Project.</p> <p>Open-Source Principles and Methodology: Open-Source History, Open-Source Initiatives, Open Standards Principles, Methodologies, Philosophy, Software freedom, Open-Source Software Development, Licenses, Copyright vs. Copy left, Patents, Zero marginal cost, Income-generation Opportunities, Internationalization.</p> <p>Licensing: What Is A License, How to create your own Licenses, Important FOSS Licenses (Apache, BSD, PL, LGPL), copyrights and copy lefts, Patent.</p>	15	
II	<p>Open-Source projects: Starting and maintaining own Open-Source Project, Open-Source Hardware, Open-Source Design, Open-source Teaching, Open-source media.</p> <p>Collaboration: Community and Communication, Contributing to Open-Source Projects Introduction to GitHub, interacting with the community on GitHub, Communication and etiquette, testing open-source code, reporting</p>	15	

	<p>issues, contributing code. Introduction to Wikipedia, contributing to Wikipedia or contributing to any prominent open-source project of student's choice.</p> <p>Open-Source Ethics and Social Impact: Open source vs. closed source, Open-source Government, Ethics of Open-source, Social and Financial impacts of open-source technology, Shared software, Shared source, Open Source as a Business Strategy</p>	
III	<p>Understanding Open-Source Ecosystem: Open-Source Operating Systems: GNU/Linux, Android, Free BSD, Open Solaris. Open-Source Hardware, Virtualization Technologies, Containerization Technologies: Docker, Development tools, IDEs, Debuggers, Programming languages, LAMP, Open-Source Database technologies</p> <p>Case Studies: Example Projects: Apache Web server, BSD, GNU/Linux, Android, Mozilla (Firefox), Wikipedia, Drupal, WordPress, Git, GCC, GDB, GitHub, Open Office, LibreOffice</p> <p>Study: Understanding the developmental models, licensing, mode of funding, commercial/non-commercial use.</p>	15

Course Code	Course Title	Credits	Lectures /Week
USCS105	Discrete Mathematics	2	3
<p>About the Course: Discrete Mathematics provides an essential foundation for virtually every area of Computer Science. The problem-solving techniques honed in Discrete Mathematics are necessary for writing complicated software. Discrete mathematics also builds the gateway to advanced courses in Mathematical Sciences, Data Science, Machine Learning, Software Engineering, etc.</p>			
<p>Course Objectives:</p> <ul style="list-style-type: none"> <input type="checkbox"/> The purpose of the course is to familiarize the prospective learners with mathematical structures that are fundamentally discrete. <input type="checkbox"/> This course will enhance prospective learners to reason and ability to articulate mathematical problems. <input type="checkbox"/> This course will introduce functions, forming and solving recurrence relations and different counting principles. These concepts will be useful to study or describe objects or problems in computer algorithms and programming languages and these concepts can be used effectively in other courses. 			
<p>Learning Outcomes: After successful completion of this course, learners would be able to:</p> <ul style="list-style-type: none"> <input type="checkbox"/> Define mathematical structures (relations, functions, graphs) and use them to model real life situations. <input type="checkbox"/> Understand, construct and solve simple mathematical problems. <input type="checkbox"/> Solve puzzles based on counting principles. <input type="checkbox"/> Provide basic knowledge about models of automata theory and the corresponding formal languages. <input type="checkbox"/> Develop an attitude to solve problems based on graphs and trees, which are widely used in software. 			
Unit	Topics	No of Lectures	
I	<p>Functions: Definition of function; Domain, co-domain, range of a function; Examples of standard functions such as identity and constant functions, absolute value function, logarithmic and exponential functions, flooring and ceiling functions; Injective, surjective and bijective functions; Composite and inverse functions.</p> <p>Relations: Definition and examples of relation; Properties of relations, Representation of relations using diagraphs and matrices; Equivalence relation; Partial Order relation, Hasse Diagrams, maximal, minimal, greatest, least element, Lattices.</p>	15	

	<p>Recurrence Relations: Definition and Formulation of recurrence relations; Solution of a recurrence relation; Solving recurrence relations- Back tracking method, Linear homogeneous recurrence relations with constant coefficients; Homogeneous solution of linear homogeneous recurrence relation with constant coefficients; Particular solution of non-linear homogeneous recurrence relation with constant coefficients; General solution of non-linear homogeneous recurrence relation with constant coefficients; Applications- Formulate and solve recurrence relation for Fibonacci numbers, Tower of Hanoi, Intersection of lines in a plane, Sorting Algorithms.</p>	
II	<p>Counting Principles: Basic Counting Principles (Sum and Product Rule); Pigeonhole Principle (without proof) - Simple examples; Inclusion Exclusion Principle (Sieve formula) (without proof); Counting using Tree diagrams.</p> <p>Permutations and Combinations: Permutation without and with repetition; Combination without and with repetition; Binomial numbers and identities: Pascal Identity, Vandermonde's Identity, Pascal triangle, Binomial theorem (without proof) and applications; Multinomial numbers, Multinomial theorem (without proof) and applications.</p> <p>Languages, Grammars and Machines: Languages and Grammars – Introduction, Phase structure grammar, Types of grammar, derivation trees; Finite-State Machines with Output; Finite-State Machines with No Output; Regular Expression and Regular Language.</p>	15
III	<p>Graphs: Graphs and Graph Models; Graph terminologies and Special types of graphs; Definition and elementary results; Representing graphs, Linked representation of a graph; Graph Isomorphism; Connectivity in graphs – path, trail, walk; Euler and Hamilton paths; Planar graphs, Graph coloring and chromatic number.</p> <p>Trees: Definition, Tree terminologies and elementary results; Linked representation of binary trees; Ordered rooted tree, Binary trees, Complete and extended binary trees, Expression trees, Binary Search tree, Algorithms for searching and inserting in binary search trees, Algorithms for deleting in a binary search tree; Traversing binary trees</p>	15

Course Code	Course Title	Credits	Lectures /Week
USCS106	Descriptive Statistics	2	3
About the Course:			
This course is designed to provide learners with an understanding of the data and to develop an understanding of the quantitative techniques from Statistics. It also provides the knowledge of different statistical tools used for primary statistical analysis of data.			
Course Objectives:			
<ol style="list-style-type: none"> 1. To develop the learners ability to deal with different types of data. 2. To enable the use of different measures of central tendency and dispersion wherever relevant. 3. To make learner aware about the techniques to check the Skewness and Kurtosis of data. 4. To make learner enable to find the correlation between different variables and further apply the regression analysis to find the exact relation between them. 5. To develop ability to analyze statistical data through R software. 			
Learning Outcomes:			
After successful completion of this course, learners would be able to			
<ol style="list-style-type: none"> 1. Organize, manage and present data. 2. Analyze Statistical data using measures of central tendency and dispersion. 3. Analyze Statistical data using basics techniques of R. 4. Study the relationship between variables using techniques of correlation and regression. 			
Unit	Topics	No of Lectures	
I	<p>Data Types and Data Presentation: Data types: Attribute, Variable, Discrete and Continuous variable, Univariate and Bivariate distribution. Types of Characteristics, Different types of scales: nominal, ordinal, interval and ratio.</p> <p>Data presentation: Frequency distribution, Histogram, Ogive curves.</p> <p>Introduction to R: Data input, Arithmetic Operators, Vector Operations, Matrix Operations, Data Frames, Built-in Functions. Frequency Distribution, Grouped Frequency Distribution, Diagrams and Graphs, Summary statistics for raw data and grouped frequency distribution.</p> <p>Measures of Central tendency: Concept of average/central tendency, characteristics of good measure of central tendency. Arithmetic Mean (A.M.), Median, Mode - Definition, examples for ungrouped and grouped data, effect of shift of origin and change of scale, merits and demerits. Combined arithmetic mean. Partition Values: Quartiles, Deciles and Percentiles - examples for ungrouped and grouped data</p>	15	

II	<p>Measures dispersion: Concept of dispersion, Absolute and Relative measure of dispersion, characteristics of good measure of dispersion. Range, Semi-interquartile range, Quartile deviation, Standard deviation - Definition, examples for ungrouped and grouped data, effect of shift of origin and change of scale, merits and demerits. Combined standard deviation, Variance. Coefficient of range, Coefficient of quartile deviation and Coefficient of variation (C.V.)</p> <p>Moments: Concept of Moments, Raw moments, Central moments, Relation between raw and central moments.</p> <p>Measures of Skewness and Kurtosis: Concept of Skewness and Kurtosis, measures based on moments, quartiles.</p>	15
III	<p>Correlation: Concept of correlation, Types and interpretation, Measure of Correlation: Scatter diagram and interpretation; Karl Pearson's coefficient of correlation (r): Definition, examples for ungrouped and grouped data, effect of shift of origin and change of scale, properties; Spearman's rank correlation coefficient: Definition, examples of with and without repetition. Concept of Multiple correlation.</p> <p>Regression: Concept of dependent (response) and independent (predictor) variables, concept of regression, Types and prediction, difference between correlation and regression, Relation between correlation and regression. Linear Regression - Definition, examples using least square method and regression coefficient, coefficient of determination, properties. Concept of Multiple regression and Logistic regression.</p>	15

USCSP201	Design & Analysis of Algorithms – Practical	1	3
1	Programs on 1-d arrays like - sum of elements of array, searching an element in array, finding minimum and maximum element in array, count the number of even and odd numbers in array. For all such programs, also find the time complexity, compare if there are multiple methods		
2	Programs on 2-d arrays like row-sum, column-sum, sum of diagonal elements, addition of two matrices , multiplication of two matrices. For all such programs, also find the time complexity, compare if there are multiple methods		
3	Program to create a list-based stack and perform various stack operations.		
4	Program to perform linear search and binary search on list of elements. Compare the algorithms by calculating time required in milliseconds using readymade libraries.		
5	Programs to sort elements of list by using various algorithms like bubble, selection sort, and insertion sort. Compare the efficiency of algorithms.		
6	Programs to select the N th Max/Min element in a list by using various algorithms. Compare the efficiency of algorithms.		
7	Programs to find a pattern in a given string - general way and brute force technique. Compare the efficiency of algorithms.		
8	Programs on recursion like factorial, fibonacci, tower of hanoi. Compare algorithms to find factorial/fibonacci using iterative and recursive approaches.		
9	Program to implement file merging, coin change problems using Greedy Algorithm and to understand time complexity.		
10	Program to implement merge sort, Straseen"s Matrix Multiplication using D-n-C Algorithm and to understand time complexity.		
11	Program to implement fibonacci series, Longest Common Subsequence using dynamic programming and to understand time complexity. Compare it with the general recursive algorithm.		
12	Program to implement N-Queen Problem, Binary String generation using Backtracking Strategy and to understand time complexity.		

Course Code	Course Title	Credits	Lectures /Week
USCS202	Advanced Python Programming	2	3
<p>About the Course: This course aims to explore and enable learners to master the skills of advanced topics in Python Programming. It helps learners develop advanced skills such as working with databases, matching patterns, implementing threads and exception handling and GUI in Python. It also highlights why Python is a useful scripting language for all developers.</p>			
<p>Course Objectives:</p> <ul style="list-style-type: none"> <input type="checkbox"/> To learn how to design object-oriented programs with Python classes. <input type="checkbox"/> To learn about reading, writing and implementing other operation on files in Python. <input type="checkbox"/> To implement threading concept and multithreading on Python <input type="checkbox"/> To design GUI Programs and implement database interaction using Python. <input type="checkbox"/> To know about use of regular expression and handling exceptions for writing robust python programs. 			
<p>Learning Outcomes: After successful completion of this course, students would be able to</p> <ul style="list-style-type: none"> <input type="checkbox"/> Ability to implement OOP concepts in Python including Inheritance and Polymorphism <input type="checkbox"/> Ability to work with files and perform operations on it using Python. <input type="checkbox"/> Ability to implement regular expression and concept of threads for developing efficient program <input type="checkbox"/> Ability to implement exception handling in Python applications for error handling. <input type="checkbox"/> Knowledge of working with databases, designing GUI in Python and implement networking in Python 			
Unit	Topics	No of Lectures	
I	<p>Working with files: Files, opening and closing a file, working with text files containing strings, knowing whether a file exists or not, working with binary files, the „with“ statement, the seek() and tell() methods, random accessing of binary files, zipping and unzipping files, working with directories, running other programs from python program</p> <p>Regular expressions: What is a regular expression?, sequence characters in regular expressions, quantifiers in regular expressions, special characters in regular expressions, using regular expression on files, retrieving information from an html file,</p> <p>Threads in python: Difference between process and thread, types of threads, benefits of threads, creating threads, single tasking and multitasking, thread synchronization, deadlock in threads, daemon threads</p> <p>Date and time in python: Date and time now, combining date and time,</p>	15	

	formatting dates and times, finding durations using “time delta”, comparing two dates, sorting dates, stopping execution temporarily, knowing the time taken by a program, calendar module	
II	<p>Database in python: Using SQL with python, retrieving rows from a table, inserting rows into a table, deleting rows from a table, updating rows in a table, creating database tables through python, Exception handling in databases.</p> <p>Exceptions in python: Errors in a python program, compile & run-time errors, logical error, exceptions-exception handling, types of exceptions, the except block, the assert statement, user-defined exceptions, logging the exceptions</p> <p>Networking: Protocols,server-client architecture, tcp/ip and udp communication</p> <p>Graphical user interface: Creating a GUI in python, Widget classes, Working with Fonts and Colours, working with Frames, Layout manager, Event handling</p>	15
III	<p>OOPs in python: Features of Object Oriented Programming system (oops)-classes and objects, encapsulation, abstraction, inheritance, polymorphism, constructors and destructors</p> <p>Classes and objects: Creating a class, the self-variable, types of variables, namespaces, types of methods, instance methods, class methods, static methods, passing members of one class to another class, inner classes</p> <p>Inheritance and polymorphism: Inheritance in python, types of inheritance- single inheritance, multilevel inheritance, hierarchical inheritance, multiple inheritance, constructors in inheritance, overriding super class constructors and methods, the super() method, method resolution order (mro), polymorphism, duck typing, operator overloading, method overloading, method overriding,</p> <p>Abstract classes and interfaces: Abstract class, abstract method,interfaces in python, abstract classes vs. Interfaces</p>	15

USCSP202	Advanced Python Programming – Practical	1	3
1	Write a program to Python program to implement various file operations.		
2	Write a program to Python program to demonstrate use of regular expression for suitable application.		
3	Write a Program to demonstrate concept of threading and multitasking in Python.		
4	Write a Python Program to work with databases in Python to perform operations such as <ul style="list-style-type: none"> a. Connecting to database b. Creating and dropping tables c. Inserting and updating into tables. 		
5	Write a Python Program to demonstrate different types of exception handling.		
6	Write a GUI Program in Python to design application that demonstrates <ul style="list-style-type: none"> a. Different fonts and colors b. Different Layout Managers c. Event Handling 		
7	Write Python Program to create application which uses date and time in Python.		
8	Write a Python program to create server-client and exchange basic information		
9	Write a program to Python program to implement concepts of OOP such as <ul style="list-style-type: none"> a. Types of Methods b. Inheritance c. Polymorphism 		
10	Write a program to Python program to implement concepts of OOP such as <ul style="list-style-type: none"> a. Abstract methods and classes b. Interfaces 		

Course Code	Course Title	Credits	Lectures /Week
USCS203	Introduction to OOPs using C++	2	3
<p>About the Course: The course aims to introduce a new programming paradigm called Object Oriented Programming. This will be covered using C++ programming language. C++ is a versatile programming language, which supports a variety of programming styles, including procedural, object-oriented, and functional programming. This makes C++ powerful as well as flexible. It can be used to develop software such as operating systems, databases, and compilers.</p>			
<p>Course Objectives:</p>			
<p>Learning Outcomes: After successful completion of this course, students would be able to</p> <ul style="list-style-type: none"> <input type="checkbox"/> Work with numeric, character and textual data and arrays. <input type="checkbox"/> Understand the importance of OOP approach over procedural language. <input type="checkbox"/> Understand how to model classes and relationships using UML. <input type="checkbox"/> Apply the concepts of OOPS like encapsulation, inheritance and polymorphism. <input type="checkbox"/> Handle basic file operations. 			
Unit	Topics	No of Lectures	
I	<p>Introduction to Programming Concepts: Object oriented programming paradigm, basic concepts of object oriented programming, benefits of object oriented programming, object oriented languages, applications of object oriented programming.</p> <p>Tokens-keywords, identifiers, constants-integer, real, character and string constants, backslash constants, features of C++ and its basic structure, simple C++ program without class, compiling and running C++ program.</p> <p>Data Types, Data Input Output and Operators: Basic data types, variables, rules for naming variables, programming constants, the type cast operator, implicit and explicit type casting, cout and cin statements, operators, precedence of operators.</p> <p>Decision Making, Loops, Arrays and Strings: Conditional statements-if, if..else, switch loops- while, do...while, for, types of arrays and string and string manipulations</p> <p>Unified Modeling Language (UML): Introduction to UML & class diagrams.</p> <p>Classes, Abstraction & Encapsulation: Classes and objects, Dot Operator, data members, member functions, passing data to functions, scope and visibility of variables in function.</p>	15	

II	<p>Constructors and Destructors: Default constructor, parameterized constructor, copy constructor, private constructor, destructors.</p> <p>Working with objects: Accessor - mutator methods, static data and static function, access specifiers, array of objects.</p> <p>Polymorphism - Binding-static binding & overloading, constructor overloading function overloading, operator overloading, overloading unary and binary operators.</p> <p>Modelling Relationships in Class Diagrams: Association, Aggregation-Composition and examples covering these principles</p>	15
III	<p>Inheritance: Defining base class and its derived class, access specifiers, types of inheritance-single, multiple, hierarchical, multilevel, hybrid inheritance, friend function and friend class, constructors in derived classes.</p> <p>Modelling Relationships: Generalization-Specialization and examples covering these principles</p> <p>Run time Polymorphism - Dynamic Binding, Function overriding, virtual function, pure virtual function, virtual base class, abstract class.</p> <p>Pointers: Introduction to pointers, * and & operators, assigning addresses to pointer variables, accessing values using pointers, pointers to objects & this pointer, pointers to derived classes</p> <p>File Handling: File Stream classes, opening and closing file-file opening modes, text file handling, binary file handling.</p> <p>Applying OOP to solve real life applications: To cover case studies like library management, order management etc. to design classes covering all relationships</p>	15
<p>Textbooks:</p> <ol style="list-style-type: none"> Object Oriented Programming with C++, Balagurusamy E., 8th Edition, McGraw Hill Education India. USCSP203	Introduction to OOPs using C++ - Practical	1	3
1	Program to demonstrate use of data members & member functions.		
2	Programs based on branching and looping statements using classes.		
3	Program to demonstrate one and two dimensional arrays using classes		
4	Program to use scope resolution operator. Display the various values of the same variables declared at different scope levels.		
5	Programs to demonstrate various types of constructors and destructors.		
6	Programs to demonstrate use of public, protected & private scope specifiers.		
7	Programs to demonstrate single and multilevel inheritance		
8	Programs to demonstrate multiple inheritance and hierarchical inheritance		
9	Programs to demonstrate inheritance and derived class constructors		
10	Programs to demonstrate friend function, inline function, this pointer		
11	Programs to demonstrate function overloading and overriding.		
12	Programs to demonstrate use of pointers		
13	Programs to demonstrate text and binary file handling		

Course Code	Course Title	Credits	Lectures /Week						
USCS204	Database Systems	2	3						
<p>About the Course: The course introduces the core principles and techniques required in the design and implementation of database systems. It includes ER Model, Normalization, Relational Model, and Relational Algebra. It also provides students with theoretical knowledge and practical skills of creating and manipulating data with an interactive query language (MySQL). It also provide student knowledge and importance of data protection.</p>									
<p>Course Objectives:</p> <ul style="list-style-type: none"> <input type="checkbox"/> To make students aware fundamentals of database system. <input type="checkbox"/> To give idea how ERD components helpful in database design and implementation. <input type="checkbox"/> To experience the students working with database using MySQL. <input type="checkbox"/> To familiarize the student with normalization, database protection and different DCL Statements. <input type="checkbox"/> To make students aware about importance of protecting data from unauthorized users. <input type="checkbox"/> To make students aware of granting and revoking rights of data manipulation. 									
<p>Learning Outcomes: After successful completion of this course, students would be able to</p> <ul style="list-style-type: none"> <input type="checkbox"/> To appreciate the importance of database design. <input type="checkbox"/> Analyze database requirements and determine the entities involved in the system and their relationship to one another. <input type="checkbox"/> Write simple queries to MySQL related to String, Maths and Date Functions. <input type="checkbox"/> Create tables and insert/update/delete data, and query data in a relational DBMS using MySQL commands. <input type="checkbox"/> Understand the normalization and its role in the database design process. <input type="checkbox"/> Handle data permissions. <input type="checkbox"/> Create indexes and understands the role of Indexes in optimization search. 									
<table border="1"> <thead> <tr> <th>Unit</th> <th>Topics</th> <th>No of Lectures</th> </tr> </thead> <tbody> <tr> <td>I</td> <td> <p>Introduction to DBMS – Database, DBMS – Definition, Overview of DBMS, Advantages of DBMS, Levels of abstraction, Data independence, DBMS Architecture</p> <p>Data models - Client/Server Architecture, Object Based Logical Model, Record Based Logical Model (relational, hierarchical, network)</p> <p>Entity Relationship Model - Entities, attributes, entity sets, relations, relationship sets, Additional constraints (key constraints, participation constraints, weak entities, aggregation / generalization, Conceptual Design using ER (entities VS attributes, Entity Vs relationship, binary Vs ternary, constraints beyond ER)</p> </td> <td>15</td> </tr> </tbody> </table>				Unit	Topics	No of Lectures	I	<p>Introduction to DBMS – Database, DBMS – Definition, Overview of DBMS, Advantages of DBMS, Levels of abstraction, Data independence, DBMS Architecture</p> <p>Data models - Client/Server Architecture, Object Based Logical Model, Record Based Logical Model (relational, hierarchical, network)</p> <p>Entity Relationship Model - Entities, attributes, entity sets, relations, relationship sets, Additional constraints (key constraints, participation constraints, weak entities, aggregation / generalization, Conceptual Design using ER (entities VS attributes, Entity Vs relationship, binary Vs ternary, constraints beyond ER)</p>	15

USCS205	Calculus	2	3
<p>About the Course: Calculus is a branch of mathematics that involves the study of rates of change. In Computer Science, Calculus is used in Machine Learning, Data Mining, Scientific Computing, Image Processing, and creating the graphics and physics engines for video games, including the 3D visuals for simulations.</p>			
<p>Course Objectives:</p> <ul style="list-style-type: none"> <input type="checkbox"/> The primary objective of this course is to introduce the basic tools of Calculus which are helpful in understanding their applications to the real world problems. <input type="checkbox"/> The course is designed to have a grasp of important concepts of Calculus in a scientific way. <input type="checkbox"/> It covers topics from as basic as definition of functions to partial derivatives of functions in a gradual and logical way. <input type="checkbox"/> The learner is expected to solve as many examples as possible to get complete clarity and understanding of the topics covered. 			
<p>Learning Outcomes: After successful completion of this course, learners would be able to:</p> <ul style="list-style-type: none"> <input type="checkbox"/> Develop mathematical skills and enhance thinking power of learners. <input type="checkbox"/> Understand mathematical concepts like limit, continuity, derivative, integration of functions, partial derivatives. <input type="checkbox"/> Appreciate real world applications which use the learned concepts. <input type="checkbox"/> Skill to formulate a problem through Mathematical modelling and simulation. 			
Unit	Topics	No of Lectures	
I	<p>DERIVATIVES AND ITS APPLICATIONS: Review of Basic Concepts: Functions, limit of a function, continuity of a function, derivative function.</p> <p>Derivative In Graphing And Applications: Increase, Decrease, Concavity, Relative Extreme; Graphing Polynomials, Rational Functions, Cusps and Vertical Tangents. Absolute Maxima and Minima, Applied Maximum and Minimum Problems, Newton's Method.</p>	15	
II	<p>INTEGRATION AND ITS APPLICATIONS: Integration: An Overview of the Area Problem, Indefinite Integral, Definition of Area as a Limit; Sigma Notation, Definite Integral, Evaluating Definite Integrals by Substitution, Numerical Integration: Simpson's Rule.</p> <p>Applications of Integration: Area between two curves, Length of a plane curve.</p> <p>Mathematical Modeling with Differential Equations: Modeling with</p>	15	

	Differential Equations, Separation of Variables, Slope Fields, Euler's Method, First-Order Differential Equations and Applications.	
III	<p>PARTIAL DERIVATIVES AND ITS APPLICATIONS:</p> <p>Functions of Several Variables: Functions of two or more variables, Limits and Continuity of functions of two or three variables.</p> <p>Partial Derivatives: Partial Derivatives, Differentiability, Differentials, and Local Linearity, Chain Rule, Implicit Differentiation, Directional Derivatives and Gradients,</p> <p>Applications of Partial Derivatives: Tangent Planes and Normal Vectors, Maxima and Minima of Functions of Two Variables.</p>	15
<p>Textbooks:</p> <p>1. Calculus: Early transcendental (10th Edition): Howard Anton, Irl Bivens, Stephen Davis, John Wiley & sons, 2012.</p> <p>Additional References:</p> <p>1. USCS206	Statistical Methods	2	3
<p>About the Course: This course introduces the key concepts in probability, conditional probabilities and distribution theory, including probability laws, random variables, expectation and variance, functions of random variables and its probability distributions. Emphasis is placed on theoretical understanding combined with problem solving using various statistical inferential techniques.</p>			
<p>Course Objectives:</p> <ul style="list-style-type: none"> <input type="checkbox"/> To make learner aware about basic probability axioms and rules and its application. <input type="checkbox"/> To understand the concept of conditional probability and Independence of events. <input type="checkbox"/> To make learner familiar with discrete and continuous random variables as well as standard discrete and continuous distributions. <input type="checkbox"/> To learn computational skills to implement various statistical inferential approaches. 			
<p>Learning Outcomes: After successful completion of this course, learners would be able to</p> <ul style="list-style-type: none"> <input type="checkbox"/> Calculate probability, conditional probability and independence. <input type="checkbox"/> Apply the given discrete and continuous distributions whenever necessary. <input type="checkbox"/> Define null hypothesis, alternative hypothesis, level of significance, test statistic and p value. <input type="checkbox"/> Perform Test of Hypothesis as well as calculate confidence interval for a population parameter for single sample and two sample cases. <input type="checkbox"/> Apply non-parametric test whenever necessary. <input type="checkbox"/> Conduct and interpret one-way and two-way ANOVA. 			
Unit	Topics	No of Lectures	
I	<p>Probability: Random experiment, sample space, events types and operations of events, Probability definition: classical, axiomatic, Elementary Theorems of probability (without proof). Conditional probability, „Bayes" theorem, independence, Examples on Probability.</p> <p>Random Variables: Concept and definition of a discrete random variable and continuous random variable. Probability mass function, Probability density function and cumulative distribution function of discrete and continuous random variable, Properties of cumulative distribution function.</p>	15	
II	<p>Mathematical Expectation and Variance: Expectation of a function, Variance and S.D of a random variable, properties.</p> <p>Standard Probability distributions: Introduction, properties, examples and applications of each of the following distributions: Binomial distribution, Normal distribution, Chi-square distribution, t distribution, F distribution</p>	15	

III	<p>Hypothesis testing: One sided, Two sided hypothesis, critical region, p-value, tests based on t, Normal and F, confidence intervals.</p> <p>Analysis of Variance: One-way, two-way analysis of variance.</p> <p>Non-parametric tests: Need of non-parametric tests, Sign test, Wilcoxon's signed rank test, run test, Kruskal-Walis tests, Chi square test.</p>	15

USCS207	E-Commerce & Digital Marketing	2	3
About the Course:			
This course introduces the fundamental concepts of e-commerce, its types, the various legal and ethical issues of e-commerce and different e-commerce applications. The course also aims to introduce basic principles and types of digital marketing and web and Google analytics			
Course Objectives:			
<ul style="list-style-type: none"> <input type="checkbox"/> To understand increasing significance of E-Commerce and its applications in Business and Various Sectors <input type="checkbox"/> To provide an insight on Digital Marketing activities on various Social Media platforms and its emerging significance in Business <input type="checkbox"/> To understand Latest Trends and Practices in E-Commerce and Digital Marketing, along with its Challenges and Opportunities for an Organization 			
Learning Outcomes:			
After successful completion of this course, students would be able to			
<ul style="list-style-type: none"> <input type="checkbox"/> Understand the core concepts of E-Commerce. <input type="checkbox"/> Understand the various online payment techniques <input type="checkbox"/> Understand the core concepts of digital marketing and the role of digital marketing in business. <input type="checkbox"/> Apply digital marketing strategies to increase sales and growth of business <input type="checkbox"/> Apply digital marketing through different channels and platforms <input type="checkbox"/> Understand the significance of Web Analytics and Google Analytics and apply the same. 			
Unit	Topics	No of Lectures	
I	<p>Introduction to E-Commerce and E- Business: Definition and competing in the digital economy, Impact of E-Commerce on Business Models, Factors Driving e-commerce and e-Business Models, Economics and social impact of e-Business, opportunities and Challenges, e-Commerce vs m- Commerce, Different e-Commerce Models (B2B, B2C, C2B, C2C, B2E), e-Commerce Applications: e-Trading, e-Learning, e-Shopping, Virtual Reality & Consumer Experience, Legal and Ethical issues in e-Commerce.</p> <p>Overview of Electronic Payment systems: Types of Electronic payment schemes (Credit cards, Debit cards, Smartcards, Internet banking), E-checks, E-Cash Concepts and applications of EDI and Limitation</p> <p>Introduction & origin of Digital Marketing: Traditional v/s Digital Marketing. Digital Marketing Strategy, The P-O-E-M Framework, Segmenting & Customizing Messages, The Digital landscape, Digital Advertising Market in India. Skills required in Digital Marketing. Digital Marketing Plan.</p>	15	
II	<p>Social Media Marketing: Meaning, Purpose, types of social media websites, Social Media Engagement, Target audience, Facebook Marketing: Business through Facebook Marketing, Creating Advertising Campaigns,</p>	15	

	<p>Adverts, Facebook Marketing Tools, LinkedIn Marketing: Importance of LinkedIn Marketing, Framing LinkedIn Strategy, Lead Generation through LinkedIn, Content Strategy, Analytics and Targeting, Twitter Marketing: Framing content strategy, Twitter Advertising Campaigns, YouTube Marketing: Video optimization, Promoting on YouTube, Monetization, YouTube Analytics</p> <p>Email Marketing: Types of Emails, Mailing List, Email Marketing tools, Email Deliverability & Email Marketing automation</p> <p>Mobile Marketing: Introduction, Mobile Usage, Mobile Advertising, Mobile Marketing Types, Mobile Marketing Features, Mobile Campaign Development, Mobile Advertising Analytics</p> <p>Content Marketing: Introduction, Content marketing statistics, Types of Content, Types of Blog posts, Content Creation, Content optimization, Content Management & Distribution, Content Marketing Strategy, Content creation tools and apps, Challenges of Content Marketing.</p>	
III	<p>Search Engine Optimization: Meaning, Common SEO techniques, Understanding Search Engines, basics of Keyword search, Google rankings, Link Building, Steps to optimize website, On-page and off-page optimization</p> <p>Search Engine Marketing: Introduction to SEM, Introduction to Ad Words - Google Ad Words, Ad Words fundamentals, Ad Placement, Ad Ranks, Creating Ad Campaigns, Campaign Report Generation, Display marketing, Buying Models: Cost per Click (CPC), Cost per Milli (CPM), Cost per Lead (CPL), Cost per Acquisition (CPA).</p> <p>Web Analytics: Purpose, History, Goals & objectives, Web Analytic tools & Methods. Web Analytics Mistakes and Pitfalls.</p> <p>Google Analytics: Basics of Google Analytics, Installing Google Analytics in website, Parameters of Google Analytics, Reporting and Analysis</p>	15
